

FH SERIES

FORMING HEAD SHRINK WRAPPERS

Polypack's FH series machines are intermittent motion total closure shrink wrappers that use a forming head to multipack a variety of products. The shrink bundles are sealed on both sides and shrunk for increased product protection. Total Closure multipacks are much more resistant to mishandling and warehouse conditions, and they present a nice, continuous surface for retail packaging applications.

POLYPACK'S FH SERIES machines are designed to provide complete enclosure of bundles with polyethylene, polyolefin or PVC films. These machines can also be designed to handle print-registered film for retail packaging.
