

ILB SERIES

INLINE BUCKET SHRINK BUNDLER. Polypack's ILB series shrink bundlers are intermittent motion shrink bundlers that use a bucket conveyor to wrap a wide range of products. They are available in hand-loaded models, or with a fully automatic product collation modules designed specifically for your application. Any products that can fit onto the bucket can be wrapped in bullseye shrink. For unstable products such as ovals and tubes, Polypack offers a patented ROKH® pick & place gantry that automatically picks up the product and places it onto the bucket conveyor for wrapping. Combined with servo-driven technology, the ROKH® pick and place system can load products quickly and accurately, and the system can be fine-tuned to transfer products with unprecedented precision.
