

MOONS'
moving in better ways

M2 Series

AC Servo System

Reliable Easy to use Fast
Intelligent Safe Professional

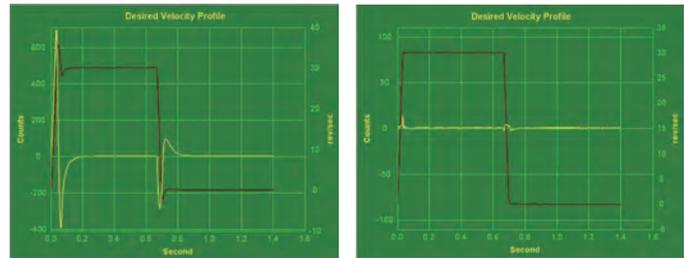

www.motiontech.com.au

Easy to Use On-line Auto Tuning

M2 servo system can accomplish real time response to the dynamic feedback of the load and optimize gain tuning parameters on-line automatically. This auto tuning function can greatly save debugging time and simplify the debugging procedure. These all can be done by the PC based software in only a few minutes.

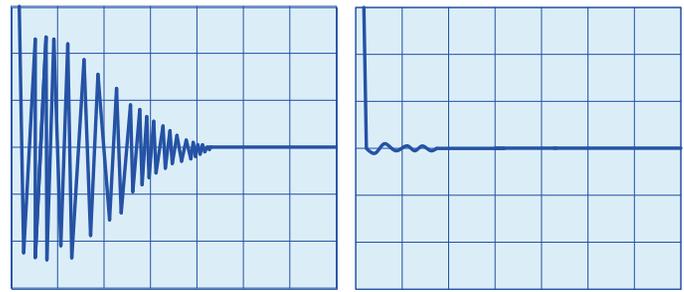

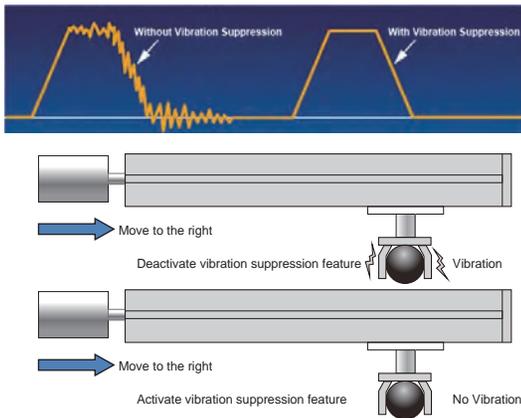

Before Auto Tuning

After Auto Tuning

Advanced Anti Vibration Function

M2 servo system has advanced anti vibration function which include anti resonance and vibration damping. Anti resonance uses two notch filters to overcome the resonance from the natural mechanical characteristic of the system.

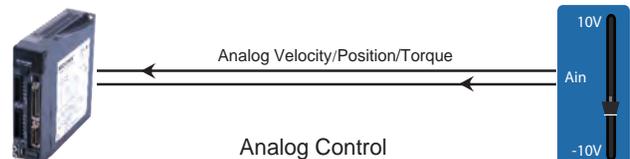

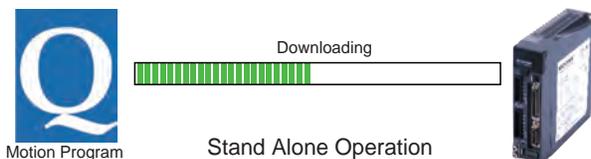

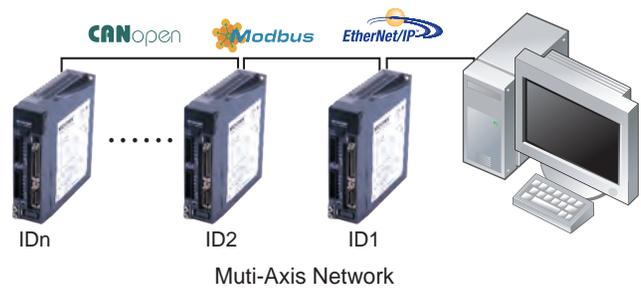

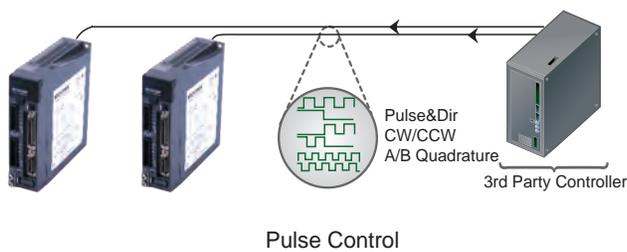

Vibration damping uses an adjustable damping ratio in the controller to improve the damping characteristic of the system, which can reduce the vibration of the system.

Without Anti vibration

With Anti vibration

Intelligent Q programming, Various Industrial Field Bus Supported

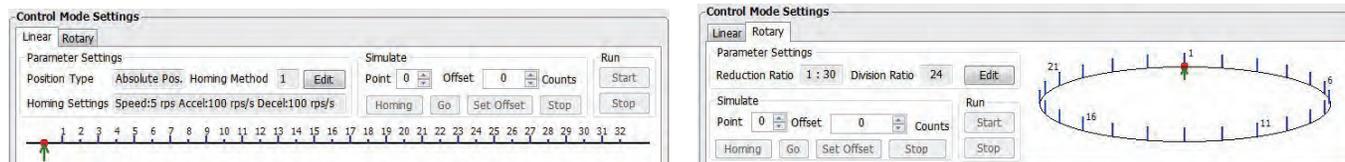

- Modbus/RTU
- CANopen CiA301 and CiA402
- EtherNet/IP
- eSCL

Flexible Internal Position Table

Position Table include Linear motion and Circular motion. Each Position can be triggered by the external digital inputs without the pulse & direction signals send by the motion controllers.

- Up to 64 points in Linear motion. Velocity, acceleration, deceleration can be set separately for each point.
- Up to 12 homing methods for Linear motion
- Up to 24 division ratios. Indexing Plate can be applied by setting the reduction gear ratio and division ratio.

Easy to Use Control Panel, Friendly Tuning Software

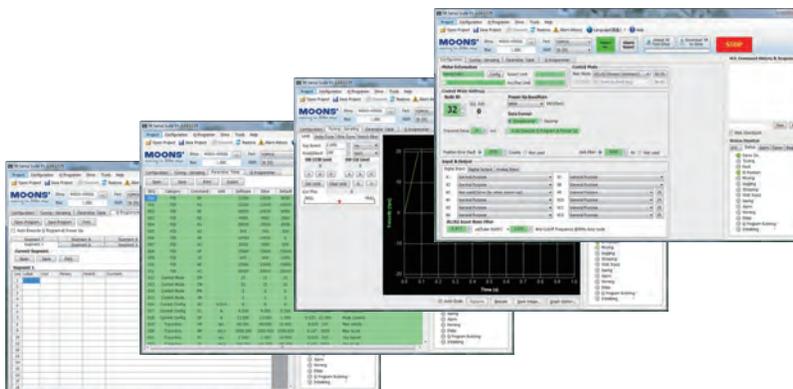

On board Control Panel

- Basic parameters setting and query
- Drive status LED display

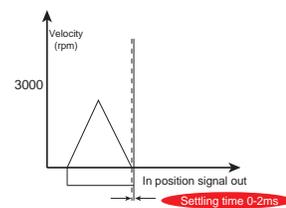

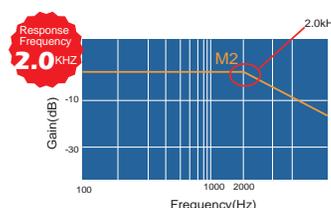

M Servo Suite tuning software

- Friendly interface
- Easy set up within just several steps
- Drive set up and configuration
- Easy to use on line auto tuning
- Built in oscilloscope for motion testing and monitoring
- Write and save SCL scripts
- On-line help integrated

Good Response Frequency and Settling Time

M2 has 2.0KHz response frequency and 0-2ms settling time. These come from the high sample rate control algorithm, fast response velocity feed forward and torque feed forward math model and flexible filter function. These greatly shorten the system response time, improve the accuracy and efficiency.

Various I/Os

- Two EIA-422 standard high speed differential inputs
- Four high speed inputs, accept 5-24VDC, input frequency up to 2MHz with digital filters
- Eight general purpose inputs, 5-24VDC
- Two analog inputs
- Five general purpose outputs, 30VDC 30mA max
- One motor brake control output, 30VDC 100mA max
- Integrated Internal Regeneration Absorbing Resistor, up to 40 Watts
