# Helical Crowned True™ Planetary Gearing offers...

- High Torque Capacity
- Low Backlash
- Smooth Operation
- Greater Load Sharing
- Whisper Quiet

Output housing and helical internal gear are machined from a single piece of high strength steel

Helical gears are known for their quiet and smooth operation along with their ability to transmit higher loads than spur gears. Both of these features of helical gearing result from the improved contact ratio (effective teeth in mesh) over spur gears. Crowning is a modification to the gear tooth profile, which optimizes gear mesh alignment. It also enhances distribution of loading on the tooth flank, thereby reducing high stress regions which can result in surface pitting.

UltraTRUE™ in-line planetary gearhead

Planetary gearheads are often selected for high-precision motion control applications, which require a high torque-to-volume ratio, high torsional stiffness and low backlash. Until now, these attributes have been sufficient to meet the requirements of the market. Thomson has designed a high-torque, whisper-quiet helical gearhead to meet the recent improvements in servo motor technology.

UltraTRUE 90™ right angle planetary gearhead

Thomson engineers accomplished this by combining the positive attributes of gear crowning and helical gearing with the planetary construction to create the smoothest operating gearhead on the market.

## Spur vs. Helical Gearing

Typical contact ratio is 1.5 for spur gearing.

Contact ratio for equivalent helical gear is 3.3, more than double the contact ratio.

The contact ratio is defined as the number of teeth in mesh at any given time. The higher the contact ratio, the higher the torque rating of the gearing. **Helical gearing has more than 2X the contact ratio of spur gearing.**

## Crowned vs. Non-crowned

Non-Crowned

Crowned

Crowning optimizes the gear mesh alignment within a gear train to increase the torque capacity and reduce noise. It also enhances load distribution on the tooth flank to reduce high stress regions.

# PowerTRUE™ Right Angle Gearheads offer...

- Lower backlash accomplished through single-axis mesh adjustment
- A compact right-angle design utilizing a high-tech face gear
- Whisper-quiet operation due to high contact ratio
- Mesh ratios from 1:1 to 5:1
- 98% efficiency

PowerTRUE™ Gear

Computerized mapping of gear tooth profile

CNC machining of a PowerTRUE right-angle gear

## PowerTRUE right angle gearset

Right-angle gear meshes are typically limited to ratios from 1:1 to 3:1 when using standard bevel gears. Compared to these designs, the PowerTRUE 90 gear increases the ratio range to 5:1.

The key to higher torque density is a unique tooth design, created by complex machining made practical with advanced CNC equipment and software. In the design, multiple teeth in the face gear simultaneously mesh with a standard involute pinion. The continuous tooth engagement yields a high contact ratio between the gear and the pinion, boosting torques to new levels and efficiency to 98%.

# Sizing and Selection

**Step 1:** Select the required precision class and gearhead configuration (in-line or right angle).

**Step 2:** Select the proper gearhead using exact or general method.

For continuous duty applications, please contact Applications Engineering.

## General Method:

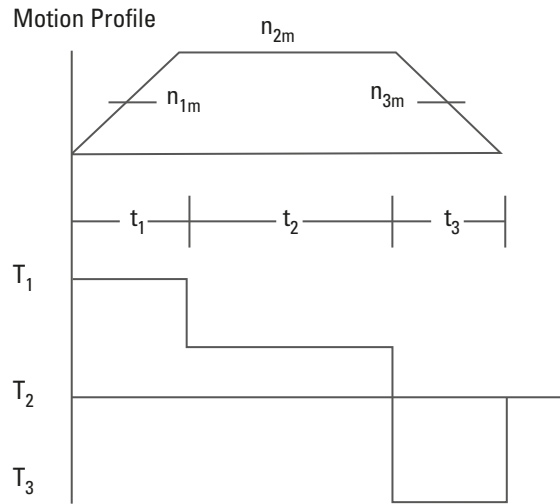

**Required Gearhead Torque( $T_r$ )**

$$(1) T_r = T_{M^*} \times i \times e$$

where:  $T_{M^*}$  = continuous torque of motor  
 $i$  = Gearhead ratio  
 $e$  = efficiency of Gearhead

\* Since many motors are capable of exceeding their continuous torque rating for extended lengths of time, the value for  $T_{M^*}$  will only provide a starting point for Gearhead selection. Only use the general method if the continuous motor rating is not exceeded in the application.

## Exact Method

$t_n$  = time period  $n$   
 $n_{nm}$  = mean speed during time period  $t_n$   
 $T_n$  = torque during time period  $t_n$

**Mean input speed ( $n_m$ )**

$$(2) n_m = \frac{n_{1m}t_1 + n_{2m}t_2 + n_{3m}t_3 + \dots + n_{nm}t_n}{t_t}$$

where  $t_t = t_1 + t_2 + t_3 + \dots + t_n$

**Equivalent torque ( $T_{EQ}$ )**

$$(3) T_{EQ} = \sqrt[8,7]{T_1^{8,7} \frac{n_{1m}t_1}{n_m t_t} + T_2^{8,7} \frac{n_{2m}t_2}{n_m t_t} + T_3^{8,7} \frac{n_{3m}t_3 + \dots}{n_m t_t} + T_n^{8,7} \frac{n_{nm}t_n}{n_m t_t}}$$

**Modified equivalent torque ( $T_{EQm}$ )**

$$(4) T_{EQm} = (T_{EQ})/Q$$

where Q is:

Q	# of cycles/hr
1,0	>0
0,9	>1000
0,7	>2500
0,5	>5000

For applications > 10,000 cycles/hour or for continuous duty operation, please contact application engineering.

# RediMount™ Motor Mounting System

## Mounting Instructions

1. Slide the provided sleeve into the hub and align the slot in the bushing with the slot in the hub.
2. Set the motor on a work surface or hold fixture with the output shaft facing straight up. If there is a key on the motor, remove it and align the keyway with the slot in the hub. Slide the gearhead down onto the motor shaft.
3. Rotate the hub to align the input housing access holes with the hub clamping bolts.
4. Using a torque wrench, tighten the hub bolts to the pre-torque value indicated in the table.
5. Bolt the motor to the gearhead with the bolts provided.
6. Gradually tighten the hub bolts in three steps, increasing the torque each time until reaching the final tightening torque in the table.

## AquaTRUE™

A revolutionary, corrosion resistant and watertight gearhead for the most demanding applications.

### Introduction

Micron's AquaTRUE gearhead combines the high performance and torque capacity of Micron's TRUE Planetary gearheads with features specifically designed to meet the strict requirements of applications such as food and beverage handling, packaging and dispensing. The AquaTRUE's IP66/IP67 and IP69K protection is able to handle caustic cleaning chemicals as well as high pressure washdown. Until now, manufacturers have been unable to use gearheads in many applications involving harsh environments because there was not a product available that met those needs. The AquaTRUE is engineered to be placed anywhere in the application's design, regardless of environmental factors. This eliminates the cost of additional components such as enclosers, shielding or mechanical transmissions.

The gearhead's 304 stainless steel housing eliminates the concern for rust or any type of corrosion. The AquaTRUE has a laser etched permanent product label and a smooth, round external housing that is designed without any external seams or corners for bacteria to collect. This makes the AquaTRUE very easy to clean and a perfect fit in any washdown environment.

## True™ Planetary Gearheads

### Introduction

The XTRUE Series is a new precision gearhead that complements our True Planetary gearhead line, already the largest selection of planetary gearheads in the world.

### Features and Benefits

- Frame sizes (8): 40mm, 50 mm, 60mm, 70 mm, 80mm, 90 mm, 120mm and 160mm
- Precision: 13 arc-mins
- Torque capacity: up to 876 Nm
- Ratio availability: 3:1 thru 100:1
- Move a larger load more easily and quietly with True planetary gearing through improved load capacity, lower backlash and quieter operation.
- Experience less downtime with the flexible mounting system: RediMount system mounts to any motor in three easy steps: align, mount and tighten.
- Simplify replacement with the tapped face output, which enables easy drop-in replacement.
- Go green on your machine when the assembly and all components meet EU Directive 2002/95/EC (RoHS)

Ratio 5P is designed using only PowerTRUE face gearing technology.

Ratio 5T adds a True Planetary gearing stage for increased torque capacity.

<sup>1</sup> Ratios are exact, higher ratios and other custom options are also available, consult factory.

T<sub>r</sub> = Rated output torque at rated speed for specific hours of life.

J = Mass moment of inertia reflected to the input shaft (including pinion assembly)

T<sub>peak</sub> = Allowable momentary peak torque for emergency stop or heavy shock loading.

Ratio 5P is designed using only PowerTRUE face gearing technology.  
 Ratio 5T adds a True Planetary gearing stage for increased torque capacity.  
<sup>1</sup> Ratios are exact, higher ratios are also available, consult factory.

T<sub>r</sub> = Rated output torque at rated speed for specific hours of life.  
 J = Mass moment of inertia reflected to the input shaft (including pinion assembly)  
 T<sub>peak</sub> = Allowable momentary peak torque for emergency stop or heavy shock loading.

Ratio 5P is designed using only PowerTRUE face gearing technology.  
 Ratio 5T adds a True Planetary gearing stage for increased torque capacity.  
<sup>1</sup> Ratios are exact, higher ratios are also available, consult factory.

T<sub>r</sub> = Rated output torque at rated speed for specific hours of life.  
 J = Mass moment of inertia reflected to the input shaft (including pinion assembly)  
 T<sub>peak</sub> = Allowable momentary peak torque for emergency stop or heavy shock loading.

<sup>1</sup> Ratios are exact, higher ratios are also available, consult factory.  
T<sub>r</sub> = Rated output torque at rated speed for specific hours of life.  
T<sub>rc</sub> = Rated output torque for intermittent operation at 3,000 RPM (20,000 hr life - for catalog comparison)

T<sub>peak</sub> = Allowable momentary peak torque for emergency stop or heavy shock loading.  
J = Mass moment of inertia reflected to the input shaft (including pinion assembly).

## Custom Gearhead Options

### Can't find what you need in this catalog?

Micron offers many different customization options to allow customers to meet the unique challenges of their applications.

#### Simple modifications that usually have little or no impact to price and lead time

- Output shaft modifications (shorter length or smaller diameter)
- Output shaft modifications (longer length or larger diameter would be product dependent)
- Custom output shaft designs (spline shafts, tapped holes)
- Higher precision options
- New ratio combinations (three stage designs, new ratios)
- Custom greases (food grade, low temperature, vacuum prep)
- Stainless steel, nickel plating or paint options

#### Other modifications that may require volume or longer lead time

- Envelope-size reductions (shorter length or width)
- Machined and mounted output gears
- Heavy shock and vibration requirements
- White paper, ground-up designs
