Lubrication oil	24

1 Overview

Boneng gear units win wide reputation with good service and stable quality both at home and abroad. The products are widely applied in main and subsidirary lifting of portal crane, tower crane, vehicle crane, tyre crane, belt crane, deck crane, float crane, cable crane, loading and unloading bridge, bridge crane and various kinds of cranes, rotary, running and trolley traveling mechanisms. We obtain obvious achievements in port, mine, melt, construction, shipbuiding and other industries.

HK Series is a special kind of gear unit designed according to structure and transmission characteristics of lifting equipment. It has the following characteristics:

- ◆ It expands the central distance between input and output shaft under the same transmission capacity, which avoids the situation of wasting power to satisfy mounting dimension, which is especially appropriate for main and subsidiary lifting mechanisms of portal crane, bridge crane and container crane.
- Modular design, international production, delivery is more lonveninet.
- ◆ In HK series, you can select level 3 or level 4 transmission, the ratio range is from 14 to 250.
- ◆ Gear box of HK series(regulation 05~22) applies steel plate welding.
- ◆ Applying grease—filled, refillable Labyrinth seal combinations sealing method, which can guard against ingress of dust—like materials into the gear box effectively with high safety reliable.

Note: 1.Gear unit is on running–permission status before delivery, lubrication oil should be filled before running. 2.The dimension unit not marked in the sample is millimeter (mm).

2 Product function mark

Oil glass

Breather

Oil filler

Oil drain

3 Type selection

Serial NO.	Description	Codes	Parameters calculation	
1	Driven machine factor	f ₁	Check f1 table on page 6 according to working lev	/el
			Prime Mover Factor	f ₂
		f2	Electric motor,hydraulic motor,turbine	1.0
2	Prime mover factor	12	Piston engine with 4–6 cylinders, cycle variation 1:100 to 1:200	1.25
			Piston engine with 1–3 cylinders,cycle variation 1:100	1.5
3	Factor for gear unit reliability	SF	Check SF table on page 6	
4	Transmission Efficiency	η	3 stage: 94%; 4 stage: 92%	
5	Input Speed	n ₁	≤1500r/min Consult us if higher speed required.	
6	Calculation of the ratio	i	i=n1/n2	
7	Calculate the input power of the gear unit on basis of the torque and power required by the driven machine.	P1	P1=T2 • n1/(9550 • i • η) or P1=P2/η	
8	Determination of gear unit type referring to the table of Transmission Capacity.	T2N、 P1N	T ₂ N ≥ T ₂ • f ₁ • f ₂ • S _{F or P₁N ≥ P₁ • f₁ • f₂ • S_F Check SF table on page 6}	
9	Check Peak Torque*	ТА	P1N≥TA • n1 • f3/9550 Check f3 table on page 6 according to working lev	/el
10	Check permissible strength of the shaft after output mode and accessories are selected.	Fr1/Fr2 Fa1/Fa2	It is crucial to check radial forces on the shafts whand output shafts are for pulleys,sprockets or gea	
11	Determination of Lubrication Systems and Lubricants		Optional lubrications 1) Splash 2) Forced Shaft-end pump Motor pump User-supplied oil station	
12	Determination of every item included in the type designation		For details about type designation,see Page 7	

^{*} Peak torque: max.load torque,e.g.peak starting,braking and operating torque.(Generally,it refers to peak starting or braking torque.)

4 Working level and Service factors

C	Cranes type	Working level		Cranes	s type	Working level
	Fitting hook type	A3-A5			For power plant installment and inspection	A1-A3
Portal Crane	Loading and unloading hook type	A6-A7		Hook type	For workshop and warehouse	A3-A5
	Loading and unloading grab type	A7-A8			For arduous workshop and warehouse	A6-A7
Tower Crane	For normal construction fitting	A2-A4		Grab type	For intermittent loading and unloading	A6-A7
Tower Grane	Loading and unloading concrete with bucket	A4-A6			For continuous loading and unloading	A8
Truck、tyre、	Fitting loading and unloading hook type	A1-A4			For lifting material box	A7-A8
crawler crane	Loading and unloading grab type	A4-A6	Bridge		For feeding material	A8
Deck crane	Hook type	A4-A6	Crane		For casting	A6-A8
Deck Claire	Grab type	A6-A7			For forging	A7-A8
	Loading and unloading hook type	A5-A6		Metallurgy special type	For quenching	A8
Floating crane	Loading and unloading grab type	A6-A7			For clamping and ingot drawing	A8
	Shipbuilding mounting type	A4-A6			For uncovering	A7-A8
	Fitting hook type	A3-A5			Raking type	A8
Cable crane	Loading, unloading or construction hook type	A6-A7			Electric magnet type	A7–A8
	Loading, unloading or construction grab type	A7-A8		Normal us	ing hook type	A5-A6
	Loading and unloading grab for stockyard	A7-A8		Loading ar	nd unloading grab type	A7-A8
Loading and unloading bridge	Loading and unloading grab for habor	A8	Portal Crane	Hook for p	ower plant	A2-A3
	Loading and unloading container for harbor	A6-A8		Ship-build	ling mounting hook type	A4-A5
_	-	_		Loading and	d unloading container type	A6-A8

Realiability Factor	SF
Ordinary:single machine halts when gear units fail,easy to replace spare parts and minor loss occurred.	1.0≤SF≤1.3
Important: a product line or and entire plant halts when gear units fail,heavy loss.	1.3 < SF ≤ 1.5
Highly reliable: severe production problem happens when gear units fail, enormous loss and life injuries.	1.5 < SF

Note: 1) f1=Factor for driven machine

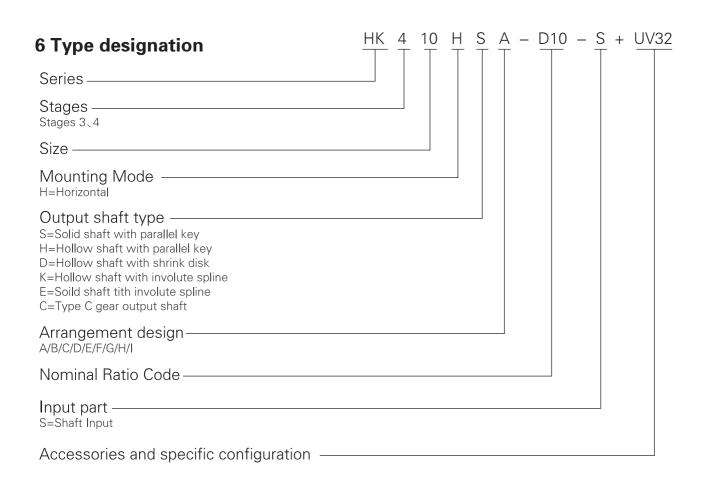

²⁾ f3=Peak torque factor when load direction is unchanging, such as hoisting mechanisms, liffing mechanisms, etc.

³⁾ f3=Peak torque factor when load direction is alternating, such as rotary,running mechanisms,etc.

5 Symbol specification

Code	Description	Unit
i	actual ratio	
in	Nominal ratio	/
İex	Exact ratio	
T ₂ N	Rated output torque	N
TA	Peak torque	N•m
P _{1N}	Rated input power of gear unit	
P ₁	Input power	kW
P ₂	Power for driven equipment	K V V
Pm	Motor power	
f ₁	Driven machine factor	
f ₂	Prime mover factor	/
fз	Peak loading conefficient	,
SF	Factor for gear unit reliability	
n ₁	Input speed	
n _{2N}	Nominal output speed	r/min
n ₂	Output speed	

7 Examples

Selection example:

Prime mover:

Motor power: Pm=30kW

Speed: n1=710rpm

Max starting torque: TA=645 N.m

Driven machine:

Main hoisting gears of bridge crane

hoisting power: P2=22 kW
Drum speed: n2=10 rpm
Working level: Q3-U9-A8
Working hour: > 50000 hours
Ambient temperature: 30°C

Gear units:

Parallel shaft gear units

Shaft arrangement: G

Center distance: ≥900mm

Selection steps:

1. Calculation of ratio:

i=n1/n2=710/10=71

take iN=C71 four stage.

2. Determination of nominal power of gear unit:

 $P1=P2/\eta = 22/92\% = 23.9kW$

 $P_{1N} \ge P_1 \cdot f_1 \cdot f_2 \cdot S_F$

 $=23.9 \times 1.6 \times 1 \times 1.2 = 45.9$ kW

Refering to transmission capacity:

Gear unit size is 10, corresponding rated power

P1N=60kW, Center distance E=940mm > 900mm meet requirement

3. Verify peak torque:

P1N≥TA • n1 • f3/9550

 $=645 \times 710 \times 0.9/9550 = 43.2$ kW

P1N=60kW > 43.2kW meet requirement

4. Determination of type:

HK410HSG-C71-S

8 Transmission capacity

9 Permissible additional radial forces on output shaft

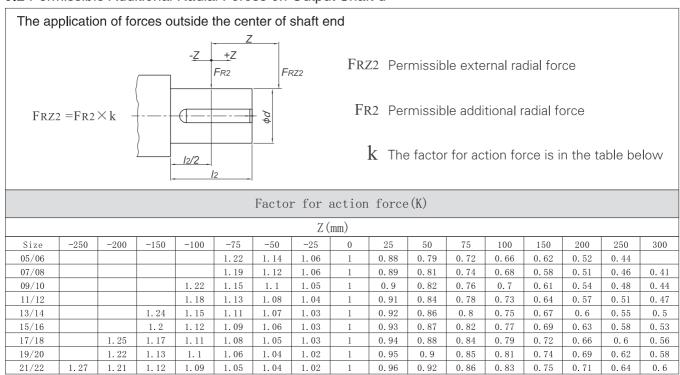

9.1 permissible Additional Radial Forces on Output Shagft d

Note: 1) If angle of action and turning direction of the force are known,in most cases, higher radial force can be allowed. Please consult us.

- 2) *For application of force outside the center of the shaft end, see 9.2.
- 3) The foundation must be dry and grease-free. Permissible additional radial force on input shaft d1 is upon request.

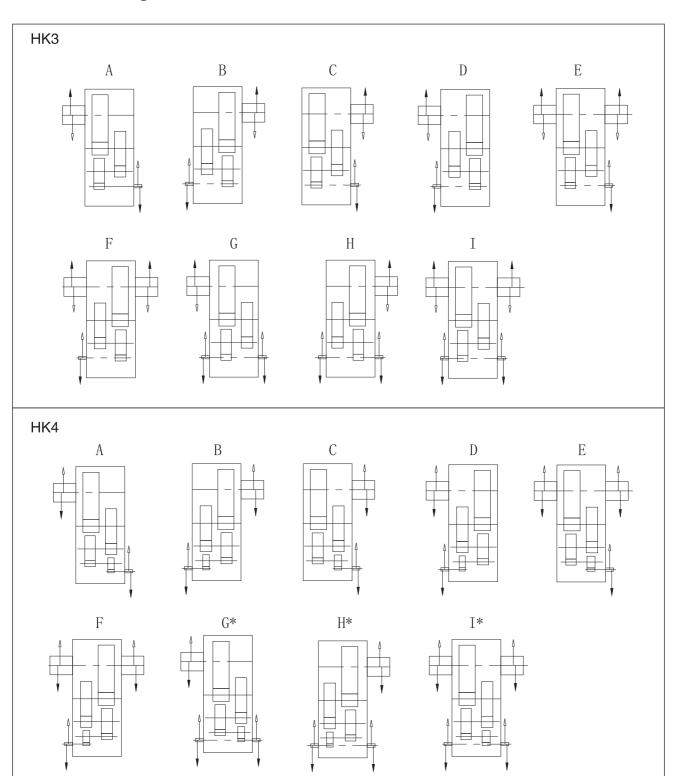

9.2 Permissible Additional Radial Forces on Output Shaft d

11

⚠ Note: 1.Material of driven machine shaft:40Cr or higher strength steel.

- 2.Driven machine shaft and parallel keys don't belong to the scope of our supply. Please order separately, if required.
- 3. Protection cover, end board and bolts are standed allocation of hollow shaft with parallel key connections.

△Note: 1.Material of driven machine shaft:40Cr or higher strength steel.

- 2. Driven machine shaft doesn't belong to the scope of our supply. But you can get the dimensions with e-mail.
- 3. Shrink disk, protective cover, end plate and circlip are standard allocation of hollow shaft with shrink disc.
- 4. Driven machine shaft must be free of oil or grease.

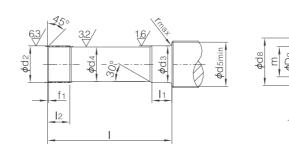

End plate

14.3 Hollow shaft with involute spline

Driven machine shaft with involute spline must be filled with grease before installation.

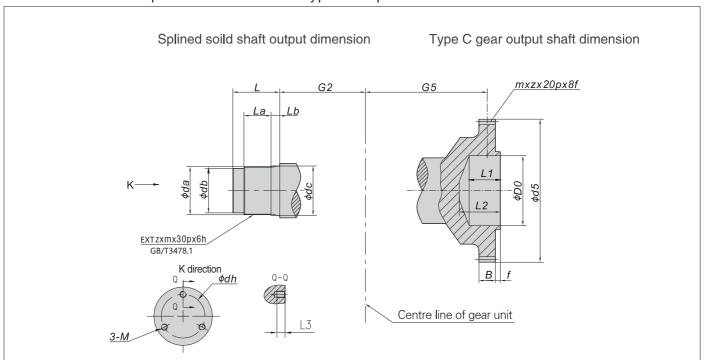

Driven machine shaft with DS center hole machined acc. to DIN 332.

15 Application drawing 15.1 Single drum transmission

15.2 Double drums transmission

16 Lubrication oil

Heavy-loading industrial gear wheel oil viscosity brand selection:

VG320 (Accessory codeUV32)

VG460 (Accessory codeUV46)

Ambient temperature ℃	-20°C ~ +40°C	+30 ℃ ~+50 ℃
Viscosity brand number	VG320	VG460

Mote: 1. Viscosity brand number in the above table is ISO-VG viscosity under 40℃.

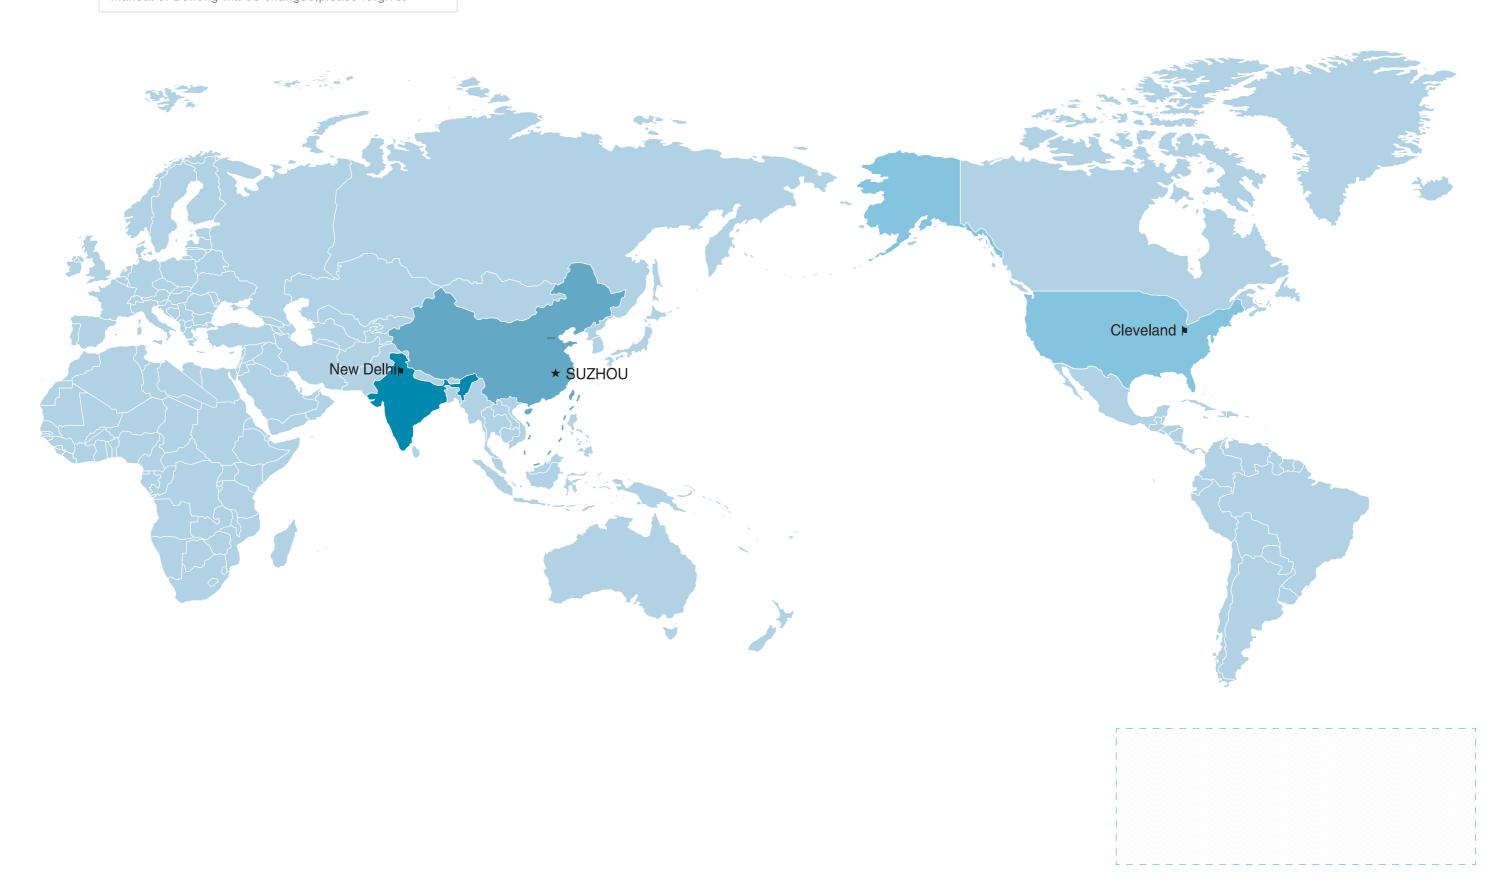

2. Synthetic oil must be used when ambient temperature is lower than -10° C.

3.To ensure product lifespan, we suggest synthetic oil in application.

4.If ambient temperature exceeds the above range, please consult us.
