## by Columbus McKinnon – Pfaff-silberblau

### Motion technology of the highest quality for every requirement

Columbus McKinnon customers expect safe and precise motion technology: our robust mechanical drives meet these requirements. They move and transport goods and structures in a wide range of industries with absolute reliability. The traditional Pfaff-silberblau brand is an important part of the Columbus McKinnon Group and offers a comprehensive range of sophisticated electromechanical components for linear motion technology such as worm gear screw jacks, lifting columns and threaded drives. With this unique portfolio, customers can combine components and solutions according to their needs.

The motion solutions with worm gear screw jacks from the Pfaff-silberblau brand are used in a wide range of applications in areas such as mechanical engineering, the automotive industry,

energy supply, the food sector and logistics applications. Suitable ranges are available for requirements in a wide range of load ranges and different sizes or lifting speeds – from moderate to dynamic. This includes the proven worm gear screw jack ranges as well as the newly developed SSP ranges with stainless steel screw jacks.

Quality products are never interchangeable as comprehensive quality and service from CMCO pay off in competitive advantages for our customers. Columbus McKinnon supports them with advice, engineering and a well-positioned office and field service. They benefit from synergies within the Columbus McKinnon Group in the areas of maintenance, service, installation and calculations. All-in-all, we offer our customers motion technology for efficient production with high operational reliability. In short: an excellent basis for your business success.

# Worm gear screw jacks

Columbus McKinnon's quality promise on products and service stands for the full capabilities of electromechanical motion elements in customer projects.

- **Technological and design quality:** the safe, reliable and precise motion technology fulfils a wide range of requirements regarding load range, size or lifting speed. The products thus meet the needs of numerous, demanding industries.
- **Modular system:** thanks to its modular design, the lifting unit/system can be constructed as required for a particular application with defined interfaces.
- **Synchronous operation and positioning:** multi-screw systems can be implemented simply and cost-effectively using connecting shafts or an electronic synchronization control. In addition, stepless positioning is possible through a defined hoist and attachment of electronic components.

- **High safety:** a self-locking screw and/or safety brakes on the drive provide protection against falling. If the support nut should break, a rotating locknut takes up the load. This increases the operational safety of the motion elements significantly and, if necessary, fulfils personnel safety requirements or accident prevention regulations.
- **High environmental compatibility:** the risk of leaks is minimal, especially when using grease-lubricated hoist gears. In addition, the motion elements have lower CO<sub>2</sub> emissions compared to pneumatic and hydraulic solutions.
- **Lower operating costs:** they result from the lower energy requirements compared to hydraulic and pneumatic drives.
- **Designed for harsh conditions:** the worm gear screw jacks impress with high precision and long service life, even when used in harsh environments with, for example, oil, dirt, pressure, vibration and extreme temperatures.

## Configuration type 1: axial lifting screw

A

Type 1: axial lifting screw –  
nut thread integrated into worm gear

Worm gear screw jacks SHE/HSE/MERKUR

- Drive is effected by the worm shaft acting on the worm wheel with nut thread.
- Lifting movement is effected by an anti-turn device (supplied with unit or added on site).

Type 1: axial lifting screw –  
nut thread integrated into bevel gear

Quick-lifting screw jack SHG

- Drive is provided by the driving pinion acting on the bevel gear with nut thread.
- Lifting movement is effected by an anti-turn device (supplied with unit or added on site).
- The alignment of the bevel gear ( $Ro$ = top wheel /  $Ru$  = bottom wheel) determines the direction of rotation.

B

**Note:**

standard configuration = right-handed screw

↑ axial movement (direction)

↷ turning direction of drive shaft

## Configuration type 2: rotating screw

Type 2: rotating screw – nut thread in travelling nut outside the housing

Type 2: rotating screw – nut thread in travelling nut outside the housing

Worm gear screw jacks SHE/HSE/MERKUR

Quick-lifting screw jack SHG

- Drive is effected by the worm shaft acting on the worm wheel with nut thread.
- Rotating movement is effected by the positive engagement of the screw in the worm wheel.
- Lifting movement is effected by the travelling nut anti-turn device fitted on-site.

- Drive is provided by the driving pinion acting on the bevel gear with nut thread.
- Rotating movement is effected by the positive engagement of the screw in the bevel gear.
- Lifting movement is effected by the travelling nut anti-turn device fitted on-site.
- The alignment of the bevel gear ( $R_o$ = top wheel /  $R_u$  = bottom wheel) determines the direction of rotation (see type 1).

### Standard worm gear screw jack SHE

13 different sizes

Lifting capacities from 5 to 2000 kN

Input speeds up to 1500 min<sup>-1</sup>

- Self-locking trapezoidal screw
- Grease-lubricated configuration
- Worm gear pairs in two ratio steps (normal „N“ and slow „L“)
- Worm-drive shaft case-hardened and ground
- Robust construction for slow and medium lifting speeds

Possible usage according to directive 2014/34/EU (ATEX)

### Stainless worm gear screw jack SHE-S

4 different sizes

Lifting capacities from 30 to 200 kN

Input speeds up to 1500 min<sup>-1</sup>

- Self-locking trapezoidal screw
- Complete stainless
- Grease-lubricated configuration
- Worm gear pairs in two ratio steps (normal „N“ and slow „L“)
- Worm-drive shaft tempered and ground

Possible usage according to directive 2014/34/EU (ATEX)

### Stainless worm gear screw jack with swivel brackets SSP

4 different sizes

Lifting capacities from 50 to 250 kN

Input speeds up to 1500 min<sup>-1</sup>

- Self-locking trapezoidal screw
- Complete stainless
- Grease-lubricated configuration
- Worm gear pairs in two ratio steps (normal „N“ and slow „L“)
- Worm-drive shaft tempered and ground

Possible usage according to directive 2014/34/EU (ATEX)

# Screw jacks

## Overview screw jacks

### Standard worm gear screw jack MERKUR

9 different sizes

Lifting capacities from 2.5 to 500 kN

Input speeds up to 1500 min<sup>-1</sup>

- Self-locking trapezoidal screw
- Grease-lubricated configuration
- All-round configuration permits easier alignment
- Conforms to European manufacturers' standards for cubic shaped worm gear screw jacks
- Worm gear pairs in two ratio steps (normal „N“ and slow „L“)

Possible usage according to directive 2014/34/EU (ATEX)

Type 1: Lifting screw

Type 2: Rotating screw

### High-performance worm gear screw jack HSE

8 different sizes

Lifting capacities from 5 to 1000 kN

Input speeds up to 3000 min<sup>-1</sup>

- Self-locking trapezoidal screw
- Separate lubrication circuits: Tr screw with grease-lubrication and worm gears with oil lubrication
- Worm gear pairs in two ratio steps (normal „N“ and slow „L“)
- Worm-drive shaft case-hardened and ground
- Patented gearing construction with different heat zones for medium and high lifting speeds

Possible usage according to directive 2014/34/EU (ATEX)

Type 1: Lifting screw

Type 2: Rotating screw

### Quick lifting screw jack SHG

4 different sizes

Lifting capacities from 15 to 90 kN

Input speeds up to 3000 min<sup>-1</sup>

- Self-locking trapezoidal screw
- Separate lubrication circuits: Tr screw grease-lubrication and bevel gear boxes with lubrication
- Bevel gear boxes in two ratio steps (2:1 and 3:1 as required)
- Gearing is case-hardened and ground
- Spiral bevel gear boxes for high lifting speeds, high efficiency ratings and long service life

Type 1: Lifting screw

Type 2: Rotating screw

### Features and processing

**Quality stands for lasting success:** this is embodied by the proven SHE worm gear screw jack ranges. Covering a load range from 0.5 t to 200 t, it boasts a classic housing shape made of spheroidal graphite cast iron. The SHE ranges is optimally used where high loads have to be positioned and lifted precisely at medium duty cycles and moderate lifting speeds. Reference projects underline the

versatility, robustness and reliability of the SHE ranges. These include, for example, a lifting system in a research laboratory for load tests, an indoor running track that can be adjusted in height and inclination and a lock opening system in hydraulic steel engineering.

### 13 different sizes

**Lifting capacities from 5 to 2000 kN**

**Input speeds up to 1500 min<sup>-1</sup>**

- Self-locking trapezoidal screw
- Grease-lubricated configuration
- Worm gear pairs in two ratio steps (normal „N“ and slow „L“)
- Worm-drive shaft case-hardened and ground
- Robust construction for slow and medium lifting speeds

Possible usage according  
to directive 2014/34/EU (ATEX)

# Screw jacks

## SHE-S stainless steel screw jacks

### Features and processing

The SHE-S screw jacks were developed for use in corrosive environments. The SHE-S ranges is the stainless alternative to our SHE ranges with identical dimensions.

All components that come into contact with corrosive media are made of corrosion-resistant materials.

**4 different sizes**

**Lifting capacities from 30 to 200 kN**

## Performance tables (screw jacks with Tr screw)

A

### SHE range (Standard worm gear screw jacks) and SHE-S range

Rotary speed, power requirement and permitted lifting speed for ratio N and L with single-start, **lifting (type 1) trapezoidal screw**. All performance data is expressed in terms of dynamic lifting capacity.

With duty ratio of < 10 %/h or configuration with rotating screw (type 2), the maximum permitted drive capacities can be increased. In this case, please consult our screw jack specialists.

## Technical drawings and dimensions

A

### 2<sup>nd</sup> Guide ring Sf

A 2<sup>nd</sup> guide ring should be provided on the SHE, if on-site guides are not possible and if restoring forces from a swivel movement or lateral forces cannot be excluded.

## Technical drawings and dimensions

### Swiveling configuration P/Pe, Q/Qe

In order to allow worm gear screw jacks to carry out swiveling and tipping movements, the drive elements must be secured at two points and permitted to move. This can be done using head IV (see page 117, Accessories swivel plates) on both

screw ends or an articulated head. The bending moment resulting from the swiveling motion should be minimized as much as possible by means of low-friction articulations.

# Screw jacks

## Application

### Reference example

The SHE-series worm gear screw jacks from Pfaff-silberblau ensure reliable operation in the latest pavers of the global mechanical engineering company. Pavers are used for the mechanical laying of mastic asphalt and thus enable large-scale paving on car parks, bridges, roads, footpaths, multi-storey car parks and halls.

Only two worm gear screw jacks are required to handle the forces of 400 kN produced during the mechanical laying of mastic asphalt. The screw jacks featuring self-locking, grease-lubricated trapezoidal screws can be positioned very precisely at speeds of 150 mm/min thanks to a high ratio (32:1) and a stroke of 0.5 mm per revolution.

A Pfaff-silberblau SHE worm gear screw jack with a stroke of 1300 mm is located on each side of the paver or chassis. The B configuration (screw-on-sided screw) ensures optimum load distribution and offers good mounting options. For example, the travelling nut can be easily integrated into the customer-supplied receptacle, whilst serving as the linear guide with optimal (tensile) loading direction. A flexible protection boot and the robust housing reliably protect the screws against the effects of weather and dirt ingress in the harsh conditions of asphalt laying

## SSP stainless steel worm gear screw jacks with swivel brackets

A

### Features and processing

**Individually combinable quality:** the newly developed SSP ranges of stainless steel worm gear screw jacks is based on a standardized modular system that can be combined individually. Designed for a load range from 5 t to 25 t, the ranges, made of high-quality stainless steel, can be used in a wide variety of mechanical lifting solutions.

Developed for the requirements of modern paper machines, we also see applications for the SSP worm gear screw jack in hydraulic steel engineering, the food industry and in potentially explosive environments.

### 4 different sizes

### Lifting capacities from 50 to 250 kN

### Input speeds up to 1500 min<sup>-1</sup>

- Self-locking trapezoidal screw
- Complete stainless
- Grease-lubricated configuration
- Worm gear pairs in two ratio steps (normal „N“ and slow „L“)
- Worm-drive shaft tempered and ground

Possible usage according to  
directive 2014/34/EU (ATEX)

## Performance tables (screw jacks with Tr screw)

A

### SSP range (Stainless worm gear screw jacks)

Rotary speed, power requirement and permitted lifting speed for ratio N and L with single-start, **lifting (type 1) trapezoidal screw**. All performance data is expressed in terms of dynamic lifting capacity.

With duty ratio of < 10 %/h or configuration with rotating screw (type 2), the maximum permitted drive capacities can be increased. In this case, please consult our screw jack specialists.

**Performance table SSP 5.1 screw Tr 40x7**

### Modular system

The SSP series is based on a standardized modular system that can be individually combined.

For upgrading individual screw jacks into complete drive systems, we offer a comprehensive range of accessories as stainless versions.

## Application

A

### Reference example

Especially for applications in paper manufacture,  
the stainless-steel series of Pfaff-silberblau is ideal:

- Plate adjustment in refiners
- Lip adjustment and/or positioning
- For tensioning of strainer
- For tensioning of felt for the cover opening of the drying actuator
- As tambour lift
- To lift and lower the tambour

## MERKUR standard screw jacks

A

### Features and processing

**High flexibility:** covering a load range from 0.25 t to 50 t, the MERKUR ranges is versatile in use. The ranges with cubic housing allows access on all sides and thus easy alignment of the screw jacks during installation. The MERKUR ranges is optimally used where high loads have to be positioned at medium duty cycles and low dynamics.

The MERKUR ranges impresses with its performance and application: the screw jacks allow and enable, for example, the (storm-)safe opening and closing of wind turbine maintenance hatches.

### 9 different sizes

### Lifting capacities from 2.5 to 500 kN

### Input speeds up to 1500 min<sup>-1</sup>

- All-round configuration permits easier alignment
- Conforms to European manufacturers' standards for cubic shaped worm gear screw jacks
- Self-locking trapezoidal screw
- Grease-lubricated configuration
- Worm gear pairs in two ratio steps (normal „N“ and slow „L“)

Possible usage according to directive 2014/34/EU (ATEX)

## Performance tables (screw jacks with Tr screw)

A

### MERKUR range (Cubic standard screw jacks)

Rotary speed, power requirement and permitted lifting speed for ratio N and L with single-start, **lifting (type 1) trapezoidal screw**. All performance data is expressed in terms of dynamic lifting capacity.

With duty ratio of < 10 %/h or configuration with rotating screw (type 2), the maximum permitted drive capacities can be increased. In this case, please consult our screw jack specialists.

**Performance table MEKRUR 0 screw Tr 14x4**

## Technical drawings and dimensions

A

### With short safety nut LFM-K

The short safety nut significantly increases the operational safety of the drive elements by absorbing the axial load in the event of a main nut fracture. At the same time, the safety nut can be used to check the wear of the main nut exactly, since the distance between the two nuts changes with increasing

wear. In the case of worm gear screw jacks with safety nuts the main load direction (tensile or compression load) and the installation position must always be taken into account, as only a consistently arranged safety nut can take up the load.

### MERKUR type 2, compression and tensile load

### With long safety nut LFM-E (DGUV V17/18 and DGUV R100-500, chap. 2.10)

When using worm gear screw jacks in theater stages (DGUV V17/18), lifting platforms (DGUV R100-500, chap. 2.10) or lifting systems where there is a risk of injury to persons, the screw jacks are designed in accordance with the current regulations.

Additional components ensure, among other things, fall protection (self-locking spindles and/or mechanical safety brakes in the drive) and, if required, the synchronous direction of rotation.

## Application

### Reference example

The „floating“ stage in Lake Idroscalo in Milan has numerous technical refinements – such as a stage roof that can be raised or lowered as required. The construction of Columbus McKinnon not only meets the high safety requirements according to DGUV V17/18 (BGV C1), which apply to the protection of the actors in particular stage technology, but also masters the extreme environmental conditions: The roof lift construction, which can be lifted and lowered with Pfaff-silberblau drive technology, resists precipitation and the humidity of the lake, defies high heat and minus temperatures and ensures absolute safety and smooth functioning even in strong gusts of wind.

The drive system consists of four optimized screw jacks of the SHE series with reinforced saw thread spindles and long, electrically monitored safety nuts. Two of these special SHEs were mechanically coupled and installed on the double shears to the left and right of the stage. Due to the limited space in the scissor construction, the spindle lifting elements were reinforced for a maximum load of 150 tons each. The two drive trains thus have a total lifting force of 6,000 kN distributed over four lifting elements.

This ensures that the screw jacks with a total drive power of around  $2 \times 18.5$  kW can move a load of 500 t at a lifting speed of around 90 mm/min. The long, electrically monitored safety nuts ensure the highest possible safety: In the event of a nut break, a mechanical, forced-opening limit switch switches off the system. The electrical synchronization of the drives takes place via a pulse cam in the safety nut, which transmits an exactly predetermined number of pulses over the entire stroke path via an inductive limit switch to the controller. This PLC control, which was also supplied by Pfaff-silberblau, ensures a corresponding evaluation. Infrared temperature sensors in the lifting elements automatically switch off the system in the event of overload or overheating. An additional plus in safety is provided by a balancing beam, which ensures an even load distribution of the individual pairs of screw jacks.

Optimized worm gear screw jacks from Pfaff-silberblau reliably and, above all, safely raise and lower the roof of Milan's lake stage.

## HSE High-performance screw jack

A

### Features and processing

**Working hard:** this is what the high-performance screw jacks of the HSE ranges are called upon to do. Covering a load range from 0.5 t to 100 t, they boast a compelling design with a housing made of spheroidal graphite cast iron, whose integral cooling fins allow a high level of heat dissipation to the surroundings. The HSE ranges is optimally used where high loads have to be positioned and lifted

precisely at high duty cycles as well as medium and high lifting speeds.

Exemplary reference projects underline the performance and robustness of the HSE ranges: this applies to the high-performance HSE worm gear screw jacks used to lift the filter housing of a natural gas production station as well as those used in a scissor lifting table.

### 8 different sizes

### Lifting capacities from 5 to 1000 kN

### Input speeds up to 3000 min<sup>-1</sup>

- Self-locking trapezoidal screw
- Separate lubrication circuits: Tr screw with grease-lubrication and worm gears with oil lubrication
- Worm gear pairs in two ratio steps (normal „N“ and slow „L“)
- Worm-drive shaft case-hardened and ground
- Patented gearing construction with different heat zones for medium and high lifting speeds

Possible usage according to  
directive 2014/34/EU (ATEX)

## Performance tables (screw jacks with Tr screw)

A

### HSE range (High-performance worm gear screw jacks)

#### Screw jacks with trapezoidal threaded screw (Tr)

Rotary speed, power requirement and permitted lifting speed for ratio N and L with single-start, **lifting (type 1) trapezoidal screw**. All performance data is expressed in terms of dynamic lifting capacity. With duty ratio of < 10 %/h or configuration with rotating screw (type 2), the maximum permitted drive capacities can be increased. In this case, please consult our screw jack specialists.

#### Screw jacks with ball threaded screw (Ku)

Rotary speed, power requirement and permitted lifting speed for **ratio „N“ with lifting (type 1) ball screw**. All performance data is expressed in terms of dynamic lifting force with 20 % ED/h. Ball screws (Ku) with higher load capacity are possible with configuration type 2.

**Performance table HSE 32 screw Tr 18x6**

## Technical drawings and dimensions

### With short safety nut SFM-O

The short safety nut significantly increases the operational safety of the drive elements by absorbing the axial load in the event of a main nut fracture. At the same time, the safety nut can be used to check the wear of the main nut exactly, since the distance between the two nuts changes with increasing wear. In the case of

worm gear screw jacks with safety nuts the main load direction (tensile or compression load) and the installation position must always be taken into account, as only a consistently arranged safety nut can take up the load.

**HSE type 1, compression load**

### With long safety nut SFM-E/SFM-D (DGUV V17/18 and DGUV R100-500, chap. 2.10)

When using worm gear screw jacks in theater stages (DGUV V17/18), lifting platforms (DGUV R100-500, chap. 2.10) or lifting systems where there is a risk of injury to persons, the screw jacks are designed in accordance with the cur-

rent regulations. Additional components ensure, among other things, fall protection (self-locking spindles and/or mechanical safety brakes in the drive) and, if required, the synchronous direction of rotation.

## Technical drawings and dimensions

### Swiveling configuration P/Q

In order to be able to perform swiveling and tilting movements with worm gear screw jacks, the drive elements must be movably attached at two points. This can be done by using a head IV (see page 117, Accessories swivel plates) or rod end at both ends.

## Technical drawings and dimensions

A

### With short safety nut LFM-K

The short safety nut significantly increases the operational safety of the drive elements by absorbing the axial load in the event of a main nut fracture. At the same time, the safety nut can be used to check the wear of the main nut exactly, since the distance between the two nuts changes with increasing

wear. In the case of worm gear screw jacks with safety nuts the main load direction (tensile or compression load) and the installation position must always be taken into account, as only a consistently arranged safety nut can take up the load.

### HSE type 2, compression and tensile load

### With long safety nut LFM-E (DGUV V17/18 and DGUV R100-500, chap. 2.10)

When using worm gear screw jacks in theater stages (DGUV V17/18), lifting platforms (DGUV R100-500, chap. 2.10) or lifting systems where there is a risk of injury to persons, the screw jacks are designed in accordance with the current

regulations. Additional components ensure, among other things, fall protection (self-locking spindles and/or mechanical safety brakes in the drive) and, if required, the synchronous direction of rotation.

# Screw jacks

## Application

### Reference example

Columbus McKinnon is fitting the ferry terminal in Kuryk on the shores of the Caspian Sea with screw jacks of the brand Pfaff-silberblau. With this expansion, the ferry port is to establish itself as a hub for the transhipment-free transport of goods to Europe.

The two huge loading bridges each contain 24 Pfaff-silberblau SHE 150.1 special screw jacks and 48 special geared motors, thus creating the technical basis for complete freight trains to be able to enter and leave the ferries quickly.

The bridge with a dead load of 400 tons is raised with a total of 12 worm gear screw jacks SHE150.1. Altogether, some 180 kW actuating power is required for this. With an actuating power of 15 kW and a maximum lifting capacity of 1500 kN, each individual SHE from Pfaff-silberblau can lift and lower around 40 tons dynamically with lifting speeds of up to 5 mm/s. When the bridge is loaded (including the weight of a freight train), the load comes to around 900 tons. In this case, the screw jacks must be capable of supporting a maximum load of up to 150 tons, whilst the technical design also takes account of an uneven weight distribution of up 40 %.

A slave-master system with absolute encoders ensures the precisely synchronized running of the screws with a maximal stroke of up to 3500 mm. The operator's safety requirements stipulated a high degree of availability, which is only possible by using a redundant concept. Consequently, the gear motors and stroke limitations are installed redundantly. In the event of a drive failing, the redundant motor can raise and lower the bridge fully on its own.

As regards safety, besides a self-locking special screw, redundant drives and stroke limitations, the screw jacks protected according to IP 66 are also characterized by additional d.c.-operated magneto-electric disc brakes on the motors. A safety nut integrated with a positive fit in the worm gear screw jack serves as a visual wear monitor. In the event of an emergency, this nut system would be capable of supporting the entire load. A flexible protection boot from a material suitable for outdoor use and a special lubricating grease protect the screws of the SHE against the extremely harsh conditions at the Caspian Sea. Standstill heating ensures reliable operation in sub-zero temperatures as low as -20 °C.

# Screw jacks

## SHG quick-lifting screw jacks

A

### Features and processing

**Dynamic and durable:** these are the characteristics our customers appreciate in the SHG quick lifting screw jack. Available in four sizes, it covers a load range from 1.5 t to 9 t. The high efficiency and long service life are achieved by using a spiral bevel gearbox.

The gearboxes of the SHG ranges are ideal where high dynamics and long duty cycles are required.

### 4 different sizes

### Lifting capacities from 15 to 90 kN

### Input speeds up to 3000 min<sup>-1</sup>

- Self-locking trapezoidal screw
- Separate lubrication circuits: Tr screw grease-lubrication and bevel gear boxes with lubrication
- Bevel gear boxes in two ratio steps (2:1 and 3:1 as required)
- Gearing is case-hardened and ground
- Spiral bevel gear boxes for high lifting speeds, high efficiency ratings and long service life

## Performance tables (screw jacks with Tr)

**A**

### SHG range (Quick-lifting screw jacks) with trapezoidal threaded screw

Rotary speed, power requirement and permitted lifting speed for ratio 2:1 and 3:1 with single-start **lifting (type 1) trapezoidal screw**.  
All performance data is expressed in terms of dynamic lifting capacity.

With duty ratio of < 10 %/h or configuration with rotating screw (type 2), the maximum permitted drive capacities can be increased. In this case, please consult our screw jack specialists.

## Special travelling nuts

A

### Design features

**Special travelling nuts are important for the safe and precise operation of systems with horizontally and vertically installed turning screws (type 2).** If the critical screw speed is exceeded, the screws must be supported adequately.

This is where specially manufactured intermediate bearings and travelling nuts from Pfaff-silberblau come into play. They are available in various designs to suit requirements, e.g. for the SHE, MERKUR, HSE and SHG ranges.

# Screw jacks

## Lifting screw protective covers

A

### Flexible protection boots

**Screw protection covers can increase the service life of the screw jacks.** Protection boots made of various materials are used for this purpose. They protect the screw jacks from dirt and external influences. The protection boots are elastic and folded like an accordion and can also be fitted over mechanically interlocking machine parts.

In the standard version, protection boots made of the material PN-100 or PN-200 are used and fastened on both ends with galvanised metal clamping collars (see drawing below). Stainless steel clamping collars (V2A) are also available on request.

For extension limits  $Az > 1000$  mm, the protection boots are fitted with limiting devices to prevent over-stretching of the individual protection boot segments.

In case of inclined or horizontal installation, the protection boots must from a stroke length of 400 mm upwards be fitted with support rings to prevent them from getting caught in the threads. If they are installed in a vertical position, one support ring per 1000 mm stroke is required.

Apart from the standard design, special designs of protection boots are also available on request.

# Screw jacks

## Couplings and connecting shafts

A

### Features and processing

**Configuration to suit requirements:** screw jacks from Columbus McKinnon Engineered Products can be assembled modularly to suit the application.

Each element meets the highest quality standards. This also applies to the couplings and connecting shafts. The torsionally flexible couplings protect the worm gear screw jacks, bevel gearboxes and motors by damping shocks and vibrations

B

C

D

# Couplings and connecting shafts

## Flexible couplings

### Features and processing

**R series:** the torsionally flexible couplings of the R series dampen vibrations and shocks and compensate axial, radial and angular displacements. They are therefore preferable to rigid couplings or shaft connections.

### Technical information: R range

Size <b>R</b>	Nominal torque $T_N$ [Nm]			Max. angular displacement [°]	Torsion angle at $T_N$ [°]	Max. axial displacement [mm]	Max. radial displacement [mm]	Mass moments of inertia <sup>1)</sup> J [kgm <sup>2</sup> ]	Material <sup>2)</sup>	Weight <sup>3)</sup>

<sup>1)</sup> Values for steel hubs b-b and max. finish bore without keyway. For aluminum, the value is reduced by a factor of approx. 3. See table on page 108.

<sup>2)</sup> For use with hardened drive shafts is select coupling with material cast iron or steel (sizes R19/24 - R48/60 also in stainless steel 1.4571).

<sup>3)</sup> Weight for material gray cast iron, for aluminum approx. 60 % less.

### Color coding of the various flexible spiders:

- 92° Shore orange
- 95/98° Shore purple

### Operating temperature:

- 92° Shore -40° to +90 °C
- 95/98° Shore -30° to +90 °C

### Dimensioning:

The nominal torque ( $T_N$ ) of the couplings – with **impact factor S<sup>4)</sup>** taken into account– must be at least equal to the system torque ( $T_{ANL}$ ) to be transferred.

$$T_N \geq T_{ANL} \times S$$

<sup>4)</sup> Impact factor S = 2 for use with three-phase motors

# Couplings and connecting shafts

## Flexible overload couplings

### Features and processing

Flexible overload couplings limit the drive torque (lifting force) of the lifting system, thus protecting the mechanism from overloads and malfunctions in the event of the drive system becoming blocked.

**MKR range:** Torque is transferred via wear-resistant, oil-proof and temperature-protected friction linings, which are held in place by means of disc springs.

MKR (R = friction linings). Friction linings are also available in rust-free configuration for outdoor use.

### Technical information: MKR range

Size	Torque limit for overload		Rotary speed n max. [min <sup>-1</sup> ]	Weight pre-drilled [kg]
	Type MKR1 [Nm]	Type MKR2 [Nm]		
0	2 – 10	10 – 20	7000	1,3
01	6 – 30	30 – 60	6500	3,0
1	14 – 70	70 – 130	5600	3,2
2	26 – 130	130 – 250	4300	6,5
3	50 – 250	250 – 550	3300	10,1
4	110 – 550	550 – 1100	2700	19,5
5	140 – 700	700 – 1400	2200	23,4

### Dimensioning:

The controlling torque of the overload coupling is factory-adjusted, with reference to starting torque  $T_A$  to 1.4 times the torque to be transferred ( $T_N$ ).

## Highly flexible connecting shafts

### Features and processing

**Highly flexible connecting shafts connect individual drive elements to form complete lifting systems with a central drive.**

They dampen vibrations and shocks, compensate for axial, radial and angular displacements and can be used up to the critical speed without pillow blocks (see speed-length diagram).

The fitting of pillow blocks allows the shaft length L to be doubled or quadrupled. However, in a one-piece configuration, it is limited to a length of 6 m due to the standard lengths of tube normally available.

Four different versions are available for different speed ranges and requirements

### Technical information: ZR range

# Accessories

## Swivel plates

### Technical drawings: Swivel plates

In order to allow worm gear screw jacks to carry out swiveling and tipping movements, the drive elements must be secured at two points and permitted to move. This can be done using swivel plates

and a head IV or articulated head. The bending moment resulting from the swiveling motion should be minimized as much as possible by means of low-friction articulations.

## Motor mounting flanges SHE range

### Technical drawings: SHE range

In certain situations, the versatile use of the worm gear screw jacks requires the direct mounting of motors. If the weight and dimensions of the two drive elements are not too different, IEC flanges and torsionally flexible couplings can be used for direct mounting of the motor.

If the drive motor is provided by the customer, we must be given a dimensional drawing of the connections. The customer must also specify the mounting side on the screw jack, right or left.

For reasons of simplification, only frequently required motor mounting flanges are shown below.

We will be pleased to advise you!

### Dimensions motor mounting flanges: SHE range

## Pillow blocks

### Technical drawings: Pillow blocks

The pillow block bearing to DIN 736 is complete with rolling bearing, tapered bore and adapter sleeve. The housing is equipped with a felt seal on both sides according to DIN 5419. This series is particularly suitable for intermediate support of highly flexible connecting shafts as the adapter sleeve can be fixed on the outside diameter of the tube.

To avoid distortions, only one pillow block may be implemented as a fixed bearing when more than one pillow block is used.

## Hand wheel and lubrication device

### Technical drawing: Hand wheel

The hand wheel is designed for manual emergency operation or manual adjustment of worm gear screw jacks. Design: hand wheel according to DIN 950 with rotating ball handle (DIN 98) made of polished and anodised aluminium.

When ordering, please specify the hand wheel diameter and size (e.g.: HSE 32)

### Dimensions: Hand wheel

### Technical drawing: Automatic lubricators

Automatic lubricators are filled with high-quality grease and provide continuous lubrication of the screw jack and worm gear for up to 12 months. This makes them an economical solution for reducing maintenance intervals.

#### Color activation screw

Color <b>1</b>	Dispensing time
yellow	1 month
green	3 months
red	6 months
grey	12 months

#### Technical information:

- Metal housing
- Drive provided by electrochemical reaction
- At 20 °C, running times of 1, 3, 6 and 12 months are possible (the color of the activation screw **1** denotes the dispensing time)
- 120 cm<sup>3</sup> volume
- Maximum compression accumulation of 4 bar
- Operating temperatures ranging from 0 °C up to a maximum of +40 °C are possible

# Screw jacks

## Application

A

### Reference example: Lifting system from Pfaff-silberblau for flood protection gate in the Greifswald flood barrier

The first barrage in Greifswald, inaugurated in 2015, is part of the currently the largest coastal protection project in Mecklenburg-Western Pomerania. In the event of a storm surge, it is designed to protect the city region of Greifswald and the urban district of Greifswald-Wieck against flooding, which is regarded as the most vulnerable region of the Baltic Sea on account of its exposed location. If a flood warning is issued, this involves locking the main gate of the flood barrier with the aid of a revolving segment to protect against the high tide. At the same time, the 17 m wide and some 18 t heavy sliding gates are closed on the south and north pier of the flood barrier. This involves the gates running on railway tracks based on the principle of an oversized sliding door.

This is precisely where the worm gear screw jacks from Pfaff-silberblau come in. In the event of an emergency and also for maintenance purposes, each sliding gate has to be lifted from its parking position in the sliding gate chambers in the dams via a rocker with travel wheel by up to 150 mm and lowered safely onto the rail. The wheel is lifted with a lifting speed of 0.05 m/min by means of an electromechanical drive unit designed and delivered by Pfaff-silberblau specifically for this application

A worm gear screw jack of the SHE 25 ranges from Pfaff-silberblau with a rotating and self-locking trapezoidal screw, special travelling nut, absolute encoder, special grease and a bevel gear box motor with 1.5 kW actuating power is used. In case of an emergency, the drive unit also features a hand wheel at the motor.

Specifically for this outdoor maritime application, the screw is protected by a special flexible protection boot. The electrical components are designed in compliance with protection class IP66. All the other driving elements are also made from weatherproof materials and are protected with high-quality special paint in compliance with corrosiveness category C5M as defined by DIN EN ISO 12944. Thanks to this special design, the drive solution from Pfaff-silberblau qualifies for outdoor use in coastal areas and a temperature range of -20°C to +50°C.

## Control units

### Technical information: Control units

Conventional contactor control and – on request – complete PLC control systems available from Columbus McKinnon.

#### Contactor control system

- For lifting systems/linear actuators with three-phase motors (~ 400 V) – conforming to European Standard DIN-EN-60204 Part 1, Part 32.

#### H1TM basic version

- Protection rating IP 54
- Housing made of plastic (270 x 220 x 108 mm)
- Operating voltage ~ 400 V 50 Hz
- Control system voltage ~ 42 V 50 Hz
- Motor protection relay
- „UP/DOWN“ push-button control
- Signals from the limit switches can be processed
- Built-in „EMERGENCY OFF“ master switch and reversal protection

#### H1TM with external push-button controls and main contactor

- With wall-mounted „UP/DOWN“ and „EMERGENCY OFF“ push-buttons (supplied in separate package) or
- With „UP/DOWN“ and „EMERGENCY OFF“ pendant switches (incl. 5 m control cable)

#### H1TM with electronic overload protection

(required for lifting devices from loads of 1000 kg)

- With main contactor
- Overload relay
- Key-operated „reset“ control
- Fault-warning light

### Technical data: Control units

Type H1TM	Motor power rating up to kW
Basic version	4,0
With external wall-mounted push-button	4,0
With external pendant switch	4,0
With electrical overload protection	4,0
With external wall-mounted push-button and electrical overload protection	4,0
With external pendant switch and electrical overload protection	4,0

Available in AC version and DC versions on request

# Bevel gear boxes

With Pfaff-silberblau, you can design the drive to perfectly match machinery directives and your own requirements.

In the system, the structurally high-quality bevel gearboxes – in addition to hoist drives, connecting shafts, motor, etc. – make their important contribution.

# Bevel gear boxes

## Bevel gear box range

### K...13 range

**4 Size:** K 5.13 to KV 60.13

**Max. output torque** up to 700 Nm

**Ratios K 5.13 - K 25.13:** 1:1, 2:1, 3:1

**Ratios KV 60.13:** 1:1, 1,5:1, 2:1, 3:1, 4:1 and 5:1

- For multi-screw lifting systems
- Efficient design, with cast-on base strips
- Cast housing with prime coated surface

A

### KA and KV range

**9 Size:** KA 1 to KA 35 and KV 90 to KV 550

**Max. output torque** up to 8500 Nm

**Ratios:** 1:1, 1,5:1, 2:1, 3:1, 4:1, 5:1 and 6:1

- Hardened, paired, lapped helical tooth pattern
- Cubic, all-round machined symmetrical housing
- All-round fixing holes
- Mounting brackets available as accessories
- Configuration available with output-side hollow shaft
- Configuration available with input-side hollow shaft and IEC flange (rectangular flange available on request)
- Cast housing with prime coated surface
- Corrosion-resistant configuration available (single components up to entire transmission system can be supplied in „all stainless-steel configuration“)
- Can be used without change for faster ratio (up to  $i = 2:1$ )

# Project planning for worm gear screw jacks

Pfaff-silberblau accompanies its customers through the entire project planning process for the screw jack drive.

The basis for this is our system know-how acquired from decades of experience. This covers the initial consultation, design

implementation, commissioning as well as data visualisation. We offer all project planning services from a single source: our customers appreciate this simplification of work.

# Project planning for worm gear screw jacks

## List of formulae

List of formulae			
Abbr.	Designation	Measuring unit	Formula
$\varphi^*$	Lead angle  Self-locking during shutdown*: $2,4^\circ < \varphi < 4,5^\circ$ (Self-locking out of actuation: $\varphi < 2,4^\circ$ ) Not self-locking: $\varphi > 4,5^\circ$	°	$\varphi = \arctan[P_h \div (d_2 \times \pi)]$
$\eta_{Anl}$	Lifting system efficiency rating	-	
$\eta_{HE}$	Worm gear screw jack efficiency rating	-	
a	Acceleration	m/s <sup>2</sup>	$a = v \div (60 \times t)$
As	Number of load cycles		
$C_{dyn}$	Dynamic load rating	kN	
$C_{stat}$	Static load rating	kN	
$d_2$	Pitch diameter	mm	
ED	Duty ratio	%/h	$ED = [Lift \times As \div (60 \times v)] \times 100\%$
$F_{dyn}$	Dynamic axial force (= lifting force)	kN	
$F_{stat}$	Static axial force (= retention force)	kN	
HU	Lift per rotation	mm	$HU = P_h \div i$
i	Transmission ratio	-	
$L_h$	Service life	h	$L_h = (C \div F_{dyn})^3 \times 10^6 \div (n_2 \times 60)$
$n_1$	Input speed	min <sup>-1</sup>	
$n_2$	Output speed	min <sup>-1</sup>	$n_2 = n_1 \div i$
P	Power rating	kW	$P = F_{dyn} \times v \div (60 \times \eta)$

v	Lifting speed	m/min	$v = n_1 \times P_h \div (i \times 1000)$

\*Vibrations and optimized sliding properties may affect the self-locking system. If in doubt, use a motor brake.

### Configuration conforming to DIN EN 1570-1, DIN EN 280, DIN EN 1756, DIN EN 1493

Lead angle:

- $2,4^\circ < \varphi < 4,5^\circ$  Motor with single braking torque
- $\varphi > 4,5^\circ$  Two independent braking systems

### Standards for theatre stages and broadcasting studios DGUV V17/18

Similar to configuration conforming to DGUV R100-500, chap. 2.10; although self-locking screw is not an absolute requirement if all torque transmitting components are designed to withstand twice the rated load.

## Service life $L_h$

A

### Design features

**Long service life:** the worm gear screw jacks and quick lifting screw jacks from Pfaff-silberblau are calculated and designed on the

basis of many years of experience so that high service lives can be achieved if the operating instructions are observed.

Screw	Gearing layout	Bearing layout

### Guidelines for use

#### Corrosion protection

##### Corrosion-protected aluminum housing for the ranges:

- SHE Size 0,5 and 1.1
- MERKUR Size M 0, M 1 and M 2
- HSE Size 32 and 36.1
- SHG Size G 25

##### Surface coating for all other sizes:

- SHE and HSE housings with ranges-applied prime coat
- MERKUR and SHG with phosphate coated housings

#### Dirt protection

- Leak proofing of all ranges by means of rotary lip seals fitted to drive shafts is standard
- Enclosed housing configuration on HSE und SHG ranges using additional seals
- Screw protection tube for type 1

##### Option – Lifting screw protective covers:

- Flexible protection boots made of various materials to prevent entry of dirt and for outdoor use (water -proof)

B

#### Option - Corrosion protection in special design for all ranges:

- Special coatings
- Screws and screw heads made of material 1.4305, 1.4301, 1.4571
- Worm-drive shafts made of rust-free material
- SHE range in completely rust-free material configuration

C

#### Option - Corrosion protection provided by surface coatings the screws and drive shafts for all ranges

D

# Project planning for worm gear screw jacks

## Precision ratings

### Axial clearance „a“

**Always in exact position:** if the load direction acts on one side, the axial clearance has no influence on the positioning accuracy. The reason for this is adjacent thread flanks.

Trapezoidal or buttress-thread screw	Ball screw
<b>Standard:</b> 0,1 mm ≤ a ≤ 0,3 mm depending on size	Single flange nut a ≤ 0,05 mm
<b>Modified configuration:</b> Axial play can be readjusted	Initial tension depending on size of ball  0,01 mm ≤ a ≤ 0,03 mm  Pre-stressed double nut a ≤ 0,01 mm

### Lateral clearance „b“

#### Standard

Lateral clearance „b“ occurs only in the case of type 1 as a result of play between the guide ring and the outer diameter of the screw. It comes up to about 0,2 mm and effects a linear calculative deviation „b“ depending on stroke length. The amount of play „b“ can be reduced by means of a second guide ring.

#### Special configuration

2<sup>nd</sup> guide ring with reduced play and additionally ground screw material.

D

# Project planning for worm gear screw jacks

## Dimensioning of worm gear screw jacks

### Motor drive for lifting elements

### Motor designs

Required starting torque	$T_A \sim 1,3 \times T_N$
High lifting speeds, e. g. servo drive system	Inertial mass and acceleration time are decisive factors for configuration

### Adjustment and stopping accuracy

The level of adjustment accuracy depends mainly on the precision of the screw (see page 147–148). Positioning accuracy is influenced, in the case of motor-actuated units, by the electrical

control and regulating system, the control system of the brake and by the adjustment precision of the limit switches.

**DO NOT allow motor-actuated components to collide with fixed end-limit stops!**

## Schematic drive system layout

A

### Explanation of symbols

**Worm gear screw jacks and quick lifting screw jacks of the Pfaff-silberblau brand can be used as individual drives or combined to form multi-screw systems.** Multi-screw drives with mechanical synchronisation are driven by **one** motor. They are therefore insensitive to uneven load distribution and its negative effects on the synchronisation of the screw jacks. Multi-screw systems with electrical synchronisation are characterised by a low need for mechanical connecting elements (smooth running), but they require greater control complexity. Exact synchronisation of the drives also results from suitable dimensioning of the drive motors in conjunction with master-slave control.

**Note:**

When using quick lifting screw jacks, the bevel gearboxes can be omitted if the jacks are arranged suitably.

## Further information

A

### Videos

Whether in production, in the flow of goods, in the transport chain or in maintenance – there is always something to optimise somewhere. We have the right products to make good processes even better, safer and more efficient.

Our motion technology specialists have further optimised a system lifting unit for large-scale industrial production: the 500-ton lifting unit offers a drive solution for adjusting zinc pots with 100 percent availability and minimises the downtimes of strip galvanising lines.

## Catalogue overview

### Catalogue overview

Not enough power to move your load? Then solutions from Columbus McKinnon Engineered Products GmbH can help you. They move, lift and position a wide variety of goods absolutely reliably, safely and efficiently.

Experience pays off here. For over 150 years, Pfaff-silberblau brand products have been developed further and adapted continuously to current market and customer requirements. You too will find the right products in our catalogues.

#### Lifting technology:

The manual and electrical wire rope winches are virtually predestined for work in industry and the event sector. Lifting tables are used in many industrial sectors, support production as well as logistics and enable ergonomic working.

#### Motion technology:

The motion technology products are characterised by versatility. With them, the right technical solution can be found for every application.
