KOLLMORGEN®

Because Motion Matters™

Kollmorgen: Your partner. In Motion.

Every solution comes from a real understanding of the challenges facing machine designers and users.

Innovators consistently rate Kollmorgen as one of their best motion systems manufacturing partners. Whether you are looking for classic servo motors, direct-drive servo motors, stepper motors, drives & amplifiers, gearing, actuation, or CNC & multi-axis motion controllers, Kollmorgen is one of the few companies in the world who actually designs and manufactures all of these products.

Our customers are leaders in many industries such as Aerospace & Defense, Printing, Packaging & Converting, Food & Beverage Processing, Medical Imaging, In Vitro Diagnostics & Laboratory Automation, Pharmaceutical Manufacturing, Material Forming and Cutting, Oil & Gas, and Robotics. Kollmorgen is also a leader in Warehouse Automation, including complete AGV systems, software, awareness and autonomy.

Our Automation Solutions can be found on Mars and in space, ships and submarines, O&G drilling and metrology, surgical robots and laser eye surgery, even inside artificial hearts. These are just a few applications that demand high-performance and high-quality while satisfying their specific needs.

Because motion matters, it's our focus: Motion can distinctly differentiate a machine and deliver a marketplace advantage by increasing its performance and dramatically improving overall equipment effectiveness (OEE).

High-performance motion can make your customer's machine more reliable and energy-efficient, enhance accuracy and improve operator safety. Motion also represents endless possibilities for innovation.

We've always understood this potential, and thus have kept motion at our core and in our Vison, Mission & Values, relentlessly developing products that offer precise control of torque, velocity and position accuracy in machines that rely on complex motion.

Removing the Barriers of Design, Sourcing, and Time

At Kollmorgen, we know that OEM engineers can achieve a lot more when obstacles aren't in the way. So, we clear obstacles in three important ways:

Integrating Standard and Custom Products

The optimal solution is often not clear-cut. Our application expertise allows us to modify standard products or develop totally custom solutions across our whole product portfolio so that designs can take flight.

Providing Motion Solutions, Not Just Components

As companies reduce their supplier base and have less engineering manpower, they need a total system supplier with a wide range of integrated solutions. Kollmorgen offers complete solutions as well as motion subsystems that combine programming software, engineering services and best-in-class motion components.

Global Footprint

With direct sales, engineering support, manufacturing facilities, and distributors spanning the Americas, Europe, Middle East, and Asia, we're close to OEMs worldwide. Our proximity helps speed delivery and lend support where and when they're needed.

Financial and Operational Stability

Kollmorgen is part of Fortive. A key driver in the growth of all Fortive divisions is the Fortive Business System, which relies on the principle of "kaizen" – or continuous improvement. Using world-class tools, cross-disciplinary teams of exceptional people evaluate processes and develop plans that result in superior performance.

Kollmorgen: Your partner. In Motion.

Table of Contents

KBM™ Series Frameless Brushless Motor

The KBM frameless motor series is our newest direct drive technology. KBM frameless brushless motor models are engineered to provide the high-performance, long life and simple installation that today's design engineers demand. Optional latching digital Hall effect sensors are pre-aligned and factory installed with added axial rotor length to achieve proper triggering. Choice of insulation allows operation over a wide range of line input voltage. Our detailed selection guide provides a variety of pre-engineered options and configurations that are currently available.

For customized features, contact Kollmorgen to help us understand exactly what you need and how we can further optimize any KBM or engineer a new custom motor solution for the unique requirements of your application. We are experts in providing optimized solutions such as special winding configurations, tailored mounting features, diameter and stack length dimensional adjustments, or material variations.

The Benefits of KBM Frameless Motors

• Industry-Leading Frameless Motor Performance	• Advanced electromagnetic designs deliver maximum torque density which minimizes required motor space envelope • Extremely smooth rotation with minimal cogging and low total harmonic distortion (THD) • Broad operating speed range and rapid acceleration
• Quality Construction Ensures Reliability and Safe Operation	• Redundant magnet attachment to rotor on high-speed models – adhesive bonding and high-strength banding • 155°C motor winding temperature rating with integral thermistor allows continuous safe operation for demanding applications • Designed with UL-recommended insulation systems to simplify system regulatory approval • RoHS compliant material selection • Compliant with Harmonized Type C Standards EN60034-1:2004 - Rotating Electrical Machines and where appropriate in accordance to the Low Voltage Directive 2006-95-EC
• Highly Configurable Design Minimizes Time to Solution	• 14 frame sizes with multiple stack lengths • Standard sensor feedback using Hall effect sensors • Standard high and low voltage insulation • Multiple standard windings with custom windings available upon request • Mechanical interface changes easily accommodated

KBM Series Overview

Kollmorgen, the global leader in direct drive motor technology, is pleased to offer KBM series frameless brushless motors. With a wide variety of sizes and torque ranges available, KBM models are engineered to provide the high-performance, long life and simple installation that today's design engineers demand.

Quality Construction

- Fully encapsulated stator windings
- 155°C internal winding temperature continuous capability
- PTC thermistor (avalanche-type) overload protection
- High performance magnets
- Fail-safe bands over rotor magnets*
- RoHS compliant

Available Options (No engineering fees apply)

Sensor Feedback (KBMS models)

Latching digital hall effect sensors are pre-aligned and factory installed on the lead end of the stator. Wiring instructions and electrical timing diagrams are included in this selection guide. KBMS models include added axial rotor length to achieve proper sensor triggering.

Choice of Insulation System

S (standard) – acceptable for applications up to 240 Vac drive amplifier supply.
H (high voltage) – required for applications >240 Vac and up to 480 Vac drive amplifier supply.

Allowed Modifications (Engineering fees apply.
Consult Kollmorgen Customer Support for guidance or to obtain a quotation. Unit price increase may apply, depending upon extent of modification.)

Special Windings

Motor windings may be optimized to provide desired speed and torque performance according to the unique voltage and current requirements of a customer's application. Kollmorgen engineers must confirm electrical feasibility and manufacturability of each special winding arrangement prior to quotation.

Special Rotor Hub Dimensions

Rotor hubs may be provided with special customer-designated hole patterns, mounting features or smaller inner bore diameters. Standard KBM(S) models shown within this selection guide include the largest available inner rotor bore diameter.

Rotor Hub Material

Standard configuration KBM(S) rotor hubs are constructed from non-plated cold rolled steel. If special plating, coating, cleaning or alternate material is desired, Kollmorgen engineers must confirm feasibility and pricing adjustment prior to quotation.

Stator Sleeve Material

Standard configuration KBM(S)-10, 14, 17, 25, 35, 45, 163 and 260 size stators are designed with uncoated aluminum sleeves around the stator lamination stack. If special coating or plating is desired for the aluminum stator sleeve, Kollmorgen engineers must confirm feasibility and pricing adjustment prior to quotation. Stator sleeves are only utilized for the sizes listed above.

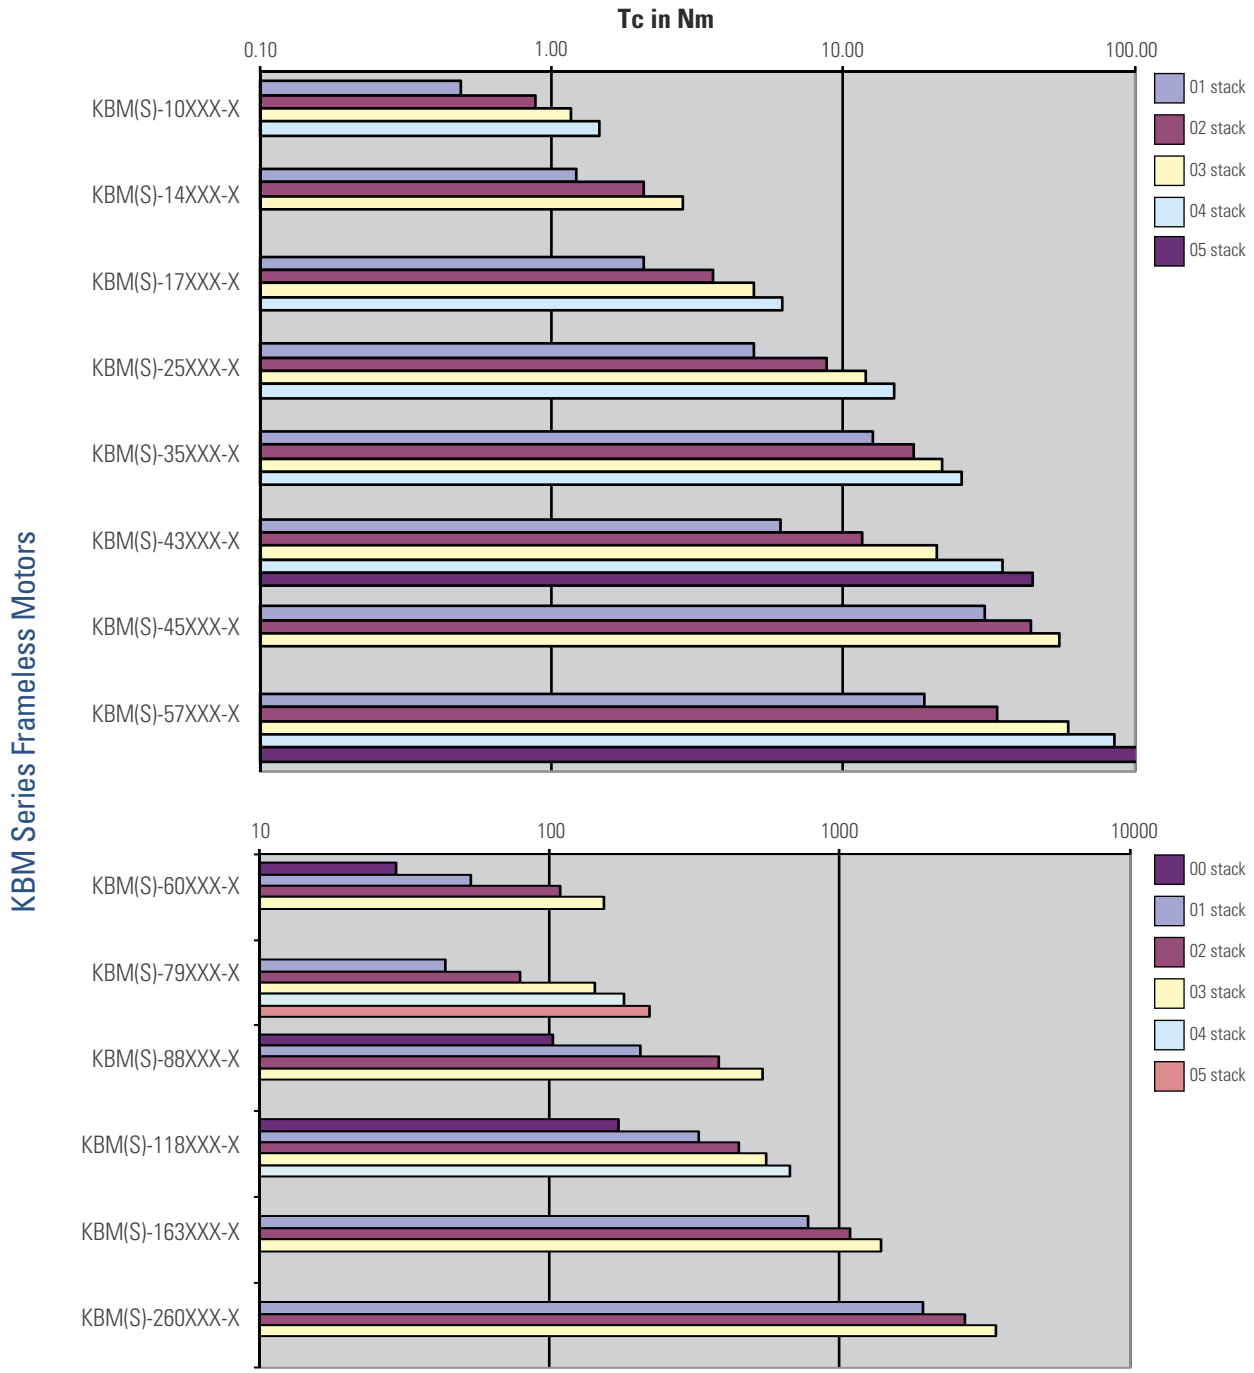
Agency UL Information

KBM(S) motors are designed to facilitate UL certification in the customer's higher-level assembly. Stator insulation systems are constructed entirely from agency-approved materials and are designed in full compliance with agency creepage and clearance dimensional guidelines. Dielectric strength between winding circuit and grounded metal stator surface is tested at agency-specified voltage level. Because a frameless motor's compliance with agency requirements is dependent upon correct installation and proper design of the surrounding enclosure by the user, KBM(S) series products are not formally labeled or agency-approved at the frameless motor level.

* Does not apply to KBM 163 and KBM 260.

KBM(S) Continuous Torque Overview

Select from our wide variety of sizes and torque ranges to suit your application needs.



For more detailed information please visit: http://www.kollmorgen.com/en-us/products/motors/direct-drive/kbm-series-frameless/

KBM 10 Frameless Motors

The KBM(S)-10 series is designed to operate over a broad speed range with high acceleration. Designed for maximum torque density with minimal cogging by using a variable air gap, the KBM(S)-10 is an ideal choice to meet or exceed your compact frameless motor application needs.

Notes
1) Winding temperature = 155°C at continuous stall, at rated output, and for performance curves.
2) To calculate no-load Kt and Kb at 25°C, multiply by 1.064.
3) TPR assumes motor is housed and mounted to a 10" x 10" x 1/4" heat sink or equivalent.
4) Peak & Continuous Torques may be limited by drive current, see www.kollmorgen.com for complete drive ratings.

KBM 35 Frameless Motors

The KBM(S)-35 series is designed to operate over a broad speed range with high acceleration. Designed for maximum torque density with minimal cogging by using a variable air gap, the KBM(S)-35 is an ideal choice to meet or exceed your compact frameless motor application needs.

Notes

KBM 43 Frameless Motors

The KBM(S)-43 series provides a classic torque motor footprint - large diameter with a short axial length. With a skewed stator, low cogging, and low harmonic distortion these motors produce extremely smooth rotation. In addition, the high pole count and excellent torque / volume ratio makes the KBM(S)-43 an ideal fit for direct drive applications requiring high torque at low to moderate speeds.

KBM 45 Frameless Motors

The KBM(S)-45 series is designed to operate over a broad speed range with high acceleration. Designed for maximum torque density with minimal cogging by using a variable air gap, the KBM(S)-45 is an ideal choice to meet or exceed your compact frameless motor application needs.

KBM 57 Frameless Motors

The KBM(S)-57 series provides a classic torque motor footprint - large diameter with a short axial length. With a skewed stator, low cogging, and low harmonic distortion these motors produce extremely smooth rotation. In addition, the high pole count and excellent torque / volume ratio makes the KBM(S)-57 an ideal fit for direct drive applications requiring high torque at low to moderate speeds.

KBM 60 Frameless Motors

The KBM(S)-60 series has an optimized slot / pole combination offering extremely high continuous torque capability while still maintaining very low total harmonic distortion. The higher pole count and excellent torque / volume ratio makes the KBM(S)-60 an ideal fit for direct drive applications requiring high torque at low to moderate speeds.

Notes

KBM 79 Frameless Motors

The KBM(S)-79 series provides a classic torque motor footprint - large diameter with a short axial length. With a skewed stator, low cogging, and low harmonic distortion these motors produce extremely smooth rotation. In addition, the high pole count and excellent torque / volume ratio makes the KBM(S)-79 an ideal fit for direct drive applications requiring high torque at low to moderate speeds.

KBM 88 Frameless Motors

The KBM(S)-88 series has an optimized slot / pole combination offering extremely high continuous torque capability while still maintaining very low total harmonic distortion. The higher pole count and excellent torque / volume ratio makes the KBM(S)-88 an ideal fit for direct drive applications requiring high torque at low to moderate speeds.

Notes

KBM 118 Frameless Motors

The KBM(S)-118 series provides a classic torque motor footprint - large diameter with a short axial length. With a skewed stator, low cogging, and low harmonic distortion these motors produce extremely smooth rotation. In addition, the high pole count and excellent torque / volume ratio makes the KBM(S)-118 an ideal fit for direct drive applications requiring high torque at low to moderate speeds.

KBM 163 Frameless Motors

The KBM(S)-163 series provides a classic torque motor footprint - large diameter with short axial length, high pole count, and large rotor thru-bore. Aluminum armature sleeve and steel rotor hub provide pilot diameter engagement surfaces and bolted mounting joints for simple installation. With very low cogging, low total harmonic distortion, and high torque capacity, the KBM(S)-163 is a great performer in the most demanding applications.

The KBM(S)-260 series provides a classic torque motor footprint - large diameter with short axial length, high pole count, and large rotor thru-bore. Aluminum armature sleeve and steel rotor hub provide pilot diameter engagement surfaces and bolted mounting joints for simple installation. With very low cogging, low total harmonic distortion, and high torque capacity, the largest member of the KBM(S) family is a great performer in the most demanding applications.

Mounting and Installation Guidelines

Safety

Safety Notes

The strong magnetic fields which are produced as long as the magnetic rotor is not installed, constitute a hazard for persons with implants, such as cardiac pacemakers, that can be influenced by magnetic fields. As a general rule, all persons who may suffer impairment to health through the influence of strong magnetic fields must keep at a safe distance of at least 1 meter from the rotor.

The strong magnetic fields which are produced constitute a hazard for persons with implants that can be influenced by magnetic fields. As a general rule, all persons who may suffer impairment to health through the influence of strong magnetic fields must keep at a safe distance of at least 1 meter from the motor.

Only properly qualified persons are permitted to perform activities such as transport, installation, commissioning and maintenance. Properly qualified persons are those who are familiar with the transport, assembly, installation, commissioning and operation of motors, and who have the appropriate qualifications for their job. Qualified personnel must know and observe the following standards and directives: IEC 60364, 60662 and national accident prevention regulations.

The recommendations included in this document are intended to serve as general installation guidelines, and are for reference purpose.

Kollmorgen assumes no responsibility for incorrect implementation of these techniques, which remain the sole responsibility of the user.

Always wear gloves when working on the motor.

Read the available documentation before installation and commissioning. Incorrect handling of the motor components can cause injury and damage to persons and equipment. Special care must be taken when installing the rotor inside the stator of the motor. Tooling or fixtures may be required.

Eye bolts used for lifting the rotor/stator must be rotatable, because fixed eye bolts can bend or break due to side loads if improperly aligned with lift hooks. Swivel eye bolts remove this risk. Use 3 eye bolts equally spaced for lifting rotor and stator to make sure, that the load is under control. Refer to the dimension drawing hardcopy in the package to detect the mounting hole positions for installing the eye bolts.

Strong magnetic fields attract metallic objects and create potential safety hazards for hands and fingers. During work on or in the vicinity of KBM motors make sure that at least two finely pointed wedges of tough non-magnetic material - e.g. V2A - (with a wedge angle of approx. 10°-15°) and a non-metallic hammer (approx. 3 kg) are at hand. In an emergency you can then use these tools to detach objects that are magnetically bound to the magnetic rotor (for instance, to free trapped parts of the body).

Keep watches and magnetic data media (credit cards, diskettes, etc.) and digital displays (mobile phones, laptops, etc.) out of the immediate vicinity (<500 mm) of the KBM motor. Because of the high forces of attraction, special care must be taken within a range of about 50 mm from the magnetic rotor. Inside this area, heavy (>1 kg) or large-area (>1 dm^2) objects of steel or iron must not be held in the hand.

The rotor must never be stored in an unpacked condition. Use non-magnetic packaging material that is at least 20 mm thick. The storage location must be dry and protected from heat. Do not expose the motor rotor to heat in excess of 100°C, unless installed inside the stator. Heat over 100°C can de-magnetize the rotor magnets.

Put up warning signs where the motors are stored:
Caution: STRONG MAGNETS

Attach easily visible warning signs (e.g. permanent self-adhesive labels) to the machine:
Caution: The drives on this machine are fitted with strong magnets.
STRONG MAGNETIC FIELDS + HIGH ATTRACTION FORCES!

It is mandatory to ensure that the metallic parts of the motor stator are properly grounded to the PE (protective earth) busbar in the switchgear cabinet. Safety for personnel cannot be assured without a low-resistance protective earth. See Grounding section of Mounting and Installation Guidelines of this documentation for more detailed information.

Power connections may still be live, even though the motor is not moving. Never undo the electrical connections to the motor while a voltage is present. In unfavorable cases this can cause arcing, with injury and damage to persons and equipment.

The thermal element in the stator windings (PTC or KTY) must be wired to the control circuit of the application to make sure, that the motor temperature is supervised and the motor is protected from overheating. It must be ensured, that winding temperature never exceeds 155°C.

Mounting and Installation Guidelines

Use as Directed

- The KBM series of permanent magnet frameless motors is designed especially for motion applications for industrial robots, machine tools, textile, packing machinery and similar machines with high requirements for dynamic positioning and servo movement.
- The user is only permitted to operate the motors under the ambient conditions which are defined in this documentation.
- The series of motors is exclusively intended to be driven by servo amplifiers under speed and / or torque control.
- The motors are installed as components in electrical apparatus or machines and can only be commissioned and put into operation as integral components of such apparatus or machines.
- The thermal resistor which is integrated in the motor windings must be supervised and evaluated.
- The conformity of the KBM motor to the standards mentioned in the EC Declaration of Conformity is only guaranteed when installed in accordance with the Mounting & Installation Guidelines in this documentation. The end user assumes responsibility for machine conformity.
- The KBM motor only use UL/UR approved materials and is designed in full compliance with agency creepage and clearance dimensional guidelines.
  The End User assumes responsibility for machine conformity.

Prohibited Use

The use of the motors in the following environments is prohibited:

- potentially explosive areas
- environments with corrosive and/or electrically conductive acids, alkaline solutions, oils, vapors, dusts
- vacuum
- directly on supply networks , mains

Commissioning the motor is prohibited if the machine in which it was installed

- does not meet the requirements of the EC Machinery Directive
- does not comply with the EMC Directive
- does not comply with the Low Voltage Directive

Package Delivered

The weight of the package which you receive depends on the number of parts inside. The weight given below always means the maximum possible weight for the package.

Motor Type	Packaging	Max Shipping Container Weight [kg]
KBM10 to 43	Reinforced fiberboard box with inner padding, hand lifted	31
KBM45	Wooden crate with inner padding, lift with hoist	60
KBM57	Reinforced fiberboard box with inner padding, hand lifted	40
KBM60	Wooden crate with inner padding, lift with hoist	60
KBM79	Wooden crate with inner padding, lift with hoist	102
KBM88	Wooden create with inner padding and pallet base, lift with fork truck	135
KBM118	Wooden crate with inner padding, lift with hoist	110
KBM163	Wooden create with inner padding and pallet base, lift with fork truck	190
KBM260	Wooden create with inner padding and pallet base, lift with fork truck	350

Transport

Transport of the package

- Climate category 2K3 to EN61800-2
- Transport temperature -25...+70°C, max. 20K/hr change
- Transport humidity rel. humidity 5% - 95%, no condensation
- Max. stacking height see table in chapter "Storage"
- Max. weight see table in chapter "Package delivered"
- Avoid shocks. If the packaging is damaged, check the motor parts for visible damage. Inform the carrier and, if appropriate, the manufacturer.

Transport of motor parts

- Pay attention to the Safety Notes given at the beginning of these guidelines.
- Wear gloves and prepare the described emergency tools (wedges and hammer)
- Tapped holes for lifting in rotor only for sizes 43 thru 118.
  Tapped holes for lifting in rotor and stator for sizes 163 - 260. See detailed outline drawings added to the package for detecting the holes.
- Use minimum 3 swivel eye bolts equally spaced.

Motor Type	Transport Tool	Preparation	Weight Rotor [kg]*	Weight Stator [kg]*
KBM10	hand carry or wheeled cart	–	0.25	1
KBM14	hand carry or wheeled cart	–	0.5	2
KBM17	hand carry or wheeled cart	–	0.8	3
KBM25	hand carry or wheeled cart	–	1.5	5
KBM35	hand carry or wheeled cart	–	3	8
KBM43	hand carry or wheeled cart	–	2.5	12
KBM45	hoist or wheeled cart	–	6	18
KBM57	hand carry or wheeled cart	–	6	30
KBM60	hoist or wheeled cart	Tapped mounting holes in rotor will accept eye bolts for lifting. Stator to be lifted with a web sling.	6	40
KBM79	hoist or wheeled cart	Tapped mounting holes in rotor will accept eye bolts for lifting. Stator to be lifted with a web sling.	15	56
KBM88	hoist, pallet jack, fork truck	Tapped mounting holes in rotor will accept eye bolts for lifting. Stator to be lifted with a web sling.	37	75
KBM118	hoist or wheeled cart	Dedicated tapped holes in rotor accept eye bolts for lifting. Stator to be lifted with a web sling.	35	56
KBM163	hoist, pallet jack, fork truck	Dedicated tapped holes in rotor and stator accept eye bolts for lifting.	46	105
KBM260	hoist, pallet jack, fork truck	Dedicated tapped holes in rotor and stator accept eye bolts for lifting.	97	210

* worst case weight (heaviest, rounded) listed for longest length version within this diameter size

Mounting and Installation Guidelines

Storage

Climate category 1K4 to EN61800-2
Storage temperature -25 to +55°C, max. variation 20K/hr.
Humidity rel. humidity 5% - 95%, no condensation
Storage time unlimited.

Maximum Stacking Height

Motor Type	Maximum Stacking Height	Motor Type	Maximum Stacking Height
KBM10	3	KBM57	3
KMB14	3	KMB60	2
KBM17	3	KBM79	2
KBM25	3	KBM88	1
KBM35	3	KBM118	1
KBM43	3	KBM163	1
KBM45	2	KBM260	1

Operation

Ambient temperature (at rated values) +5 to +25°C for site altitude up to 1000 m amsl
Permissible humidity (at rated values) 95% rel. humidity, no condensation
Power derating (currents and torques) No derating for site altitudes above 1000 m amsl with temperature reduction of 10K / 1000 m. It must be ensured, that winding temperature doesn't exceed 155°C.

Important Note: The recommendations included in this Kollmorgen selection guide are intended to serve as general installation guidelines, and are for reference purposes only. Kollmorgen assumes no responsibility for incorrect implementation of these techniques, which remain the sole responsibility of the user.

KBM(S) series motors, as well as any other Kollmorgen frameless brushless motors that are supplied as 2-piece rotor/stator components, should be installed by the user according to the general guidelines below.

User Interface Responsibilities

To assure proper performance and reliability of the motor when installed in the system, the user is responsible for designing the mounting interface using the following information as a guideline. The user is responsible for designing the rotor shaft, stator enclosure, bearing system, housing design details, material selection, fit calculations and tolerance analysis based on the needs of the intended application.

Bearings

The user-supplied bearing system in the motor application must exhibit sufficient stiffness to maintain a rigid, uniform clearance gap between the rotor and the stator under all operating conditions.

Typical Radial Running Clearance

		Models KBM(S)												
		10X	14X	17X	25X	35X	43X	45X	57X	60X	79X	88X	118X	163X	260X
Nominal Mechanical Gap	mm	0.38	0.43	0.43	0.44	0.45	0.64	0.51	0.64	0.64	0.70	0.64	0.76	1.9	1.9
	in	0.015	0.017	0.017	0.017	0.018	0.025	0.020	0.025	0.025	0.028	0.025	0.030	0.075	0.075

Concentricity requirements noted on each model-specific Kollmorgen outline drawing (website download or hardcopy inside the package) must be considered by the user. Bearings with the lowest possible friction and high quality lubricant should be chosen to minimize overall system friction, which allows optimal motor operation.

Stator Mounting Materials

A metallic housing/clamp structure is suggested to rigidly mount the stator to assure best conductive heatsinking path and proper structural integrity. Aluminum alloys are preferred due to their superior thermal conductivity and strength-to-weight ratio, although stainless steel alloys (300 series or equivalent) are an acceptable alternative for applications that are less thermally critical. Carbon steel, cast iron, 400 series stainless alloys and other magnetic flux-conducting ferrous metals are the least desirable choices for stator mounting, but can certainly be used in some cases if proper design choices are considered. Consult a Kollmorgen engineer for assistance if such metals must be used. Plastics or other similar thermally isolating materials are not recommended, since they adversely affect the heatsinking capacity of the system, making it necessary to significantly de-rate the motor's performance.

Rotor Mounting Materials

The magnetized rotor may be mounted to any metallic shaft of the user's choice. Carbon steel and stainless steel are the most commonly used shaft materials, although aluminum alloys are occasionally used if properly designed for the intended torque and thermal operating range. The user's intended method of attaching the rotor to the shaft may influence the optimum material and tolerance choices for the shaft. The user's shaft does not need to carry flux or function as a portion of the magnetic circuit to achieve rated performance when using a Kollmorgen brushless motor.

Grounding

When mounted in the application, the laminated stack (or bare metal outer sleeve) of the stator should be at the same electrical ground potential as the system chassis and the drive amplifier chassis. If this common ground path is not ensured, the application may exhibit electrical noise and also create an electrical shock hazard. The risk of shock is particularly prevalent when using high pole-count motors with large capacitance characteristics. Typically, if the stator is mounted using electrically conductive metallic components, then a robust ground path between stator stack and machine chassis is inherently achieved. Kollmorgen suggests performing a continuity check to confirm proper ground path before enabling the motor system. In some applications, depending on mounting configuration and materials chosen by the user, a separate conductive ground strap may be required. In such cases, the user is responsible for installation of the ground path and electrical verification.

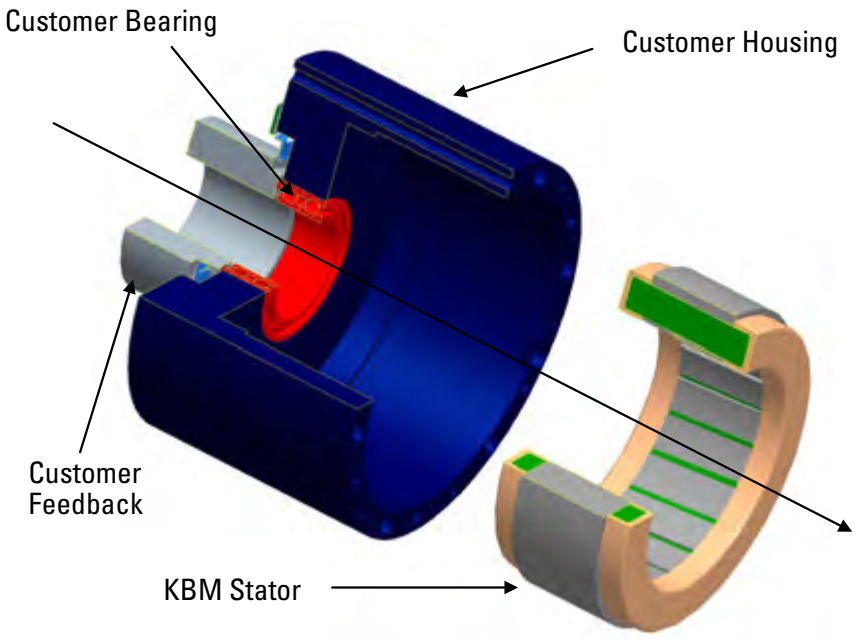
Mounting and Installation Guidelines

Stator Mounting

Kollmorgen suggests the following options for installation of the motor stator depending on torque, vibration and thermal characteristics of the application, as well as cost, ease of assembly and serviceability desired by the user.

Bonding with Structural Adhesives

In most cases, motors in the general peak torque range up to 2400 Nm may have the stator bonded in place using a structural epoxy, such as Hysol ® EA934NA, 3M ™ Scotchweld ™ 2214 or other similar adhesives. Bonding is a preferred installation technique for KBM(S)-10 through KBM(S)-118 size stators. Bonding can certainly be used to secure stators larger than the aforementioned size range if desired, but requires additional design and process considerations. To successfully utilize adhesive bonding, the user's stator enclosure should be designed as a cylindrical cup, as shown in the illustration below, with a small shoulder for axial positioning at one end and open at the opposite end.

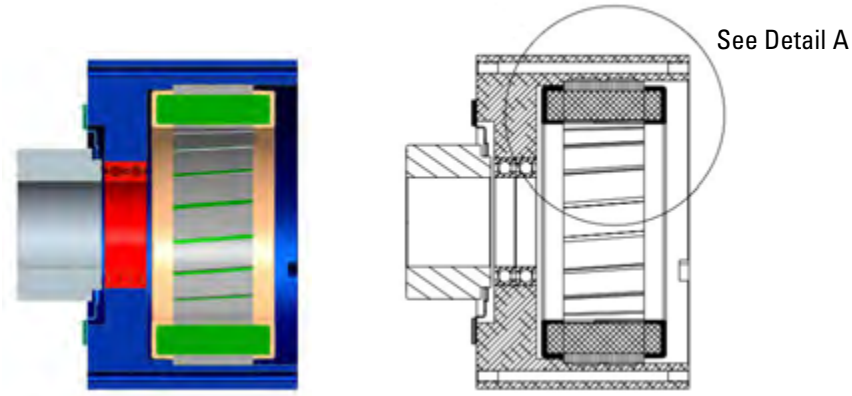


3D view

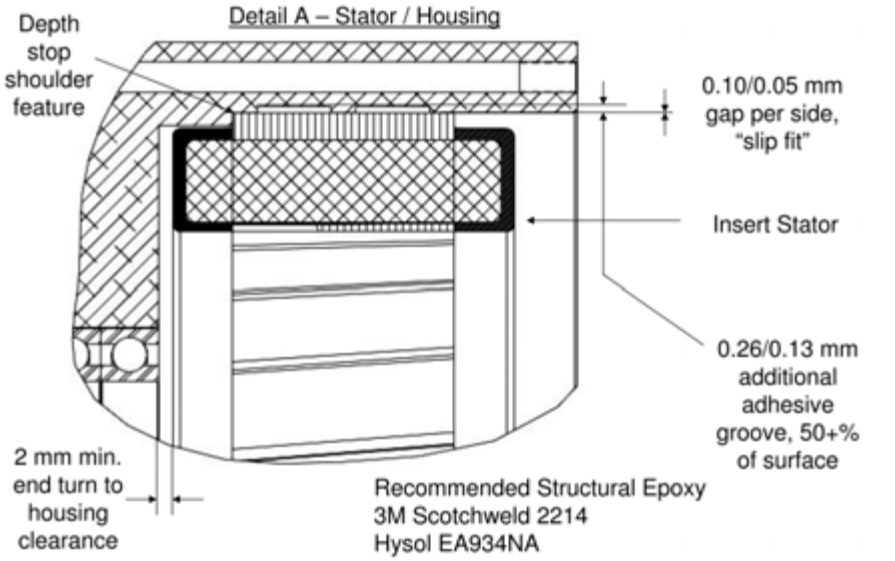
The shoulder serves as a stop point for the stator to bank against when inserted from the open end, and should generally clear the maximum outer diameter of the winding end-turn by no less than 2 mm at all circumferential points. Refer to Detail A.

A small internal chamfer at the open end of the housing cup simplifies stator insertion. If using a thick structural epoxy, the inner diameter of the housing cup should be approximately 0.1 mm - 0.2 mm larger than the maximum outer diameter of the stator. However, the user should consult the adhesive manufacturer for proper bond line thickness, application process and curing instructions. The grooves shown in the inner diameter of the housing in the Detail A illustration are intended to serve as adhesive reservoirs for the thick structural epoxy which will provide significant torsional strength across a broad temperature range. Temperature extremes create the potential issue of dissimilar expansion coefficients [steel laminations vs. aluminum housing]. These bonding agents provide excellent life and strength characteristics over time when used in the manufacturers recommended manner. If the assembly procedure is performed with the stator housing laying flat [rotation axis vertical], the hydrostatic pressure of the structural adhesive will cause the stator to self-center within the stator housing.

If a retaining compound, such as Loctite ® 640™ or other similar adhesive, is preferred instead of a structural epoxy, a tighter clearance between housing inner diameter and stator outer diameter must be controlled to maintain appropriate bond line thickness. Refer to adhesive manufacturer's guidelines for recommendations. User assumes responsibility for selecting proper adhesive and for designing housing dimensions per expected thermal growth rate at intended temperature extremes of application. Adhesive cure temperatures should not exceed 155°C to avoid damaging the motor stator (150°C for KBMS models). Stator and housing surfaces should be cleaned thoroughly prior to bonding to ensure good adhesion.



2D view

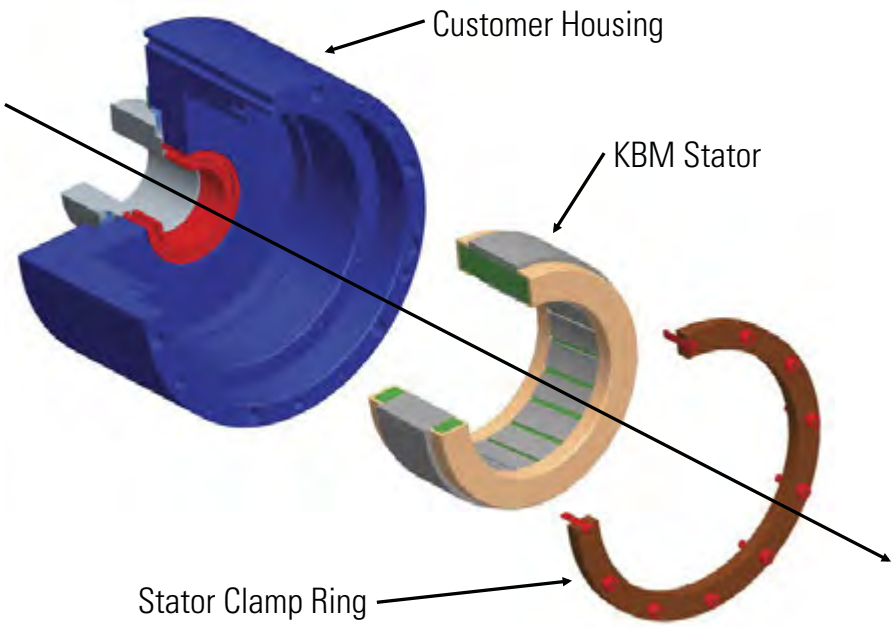


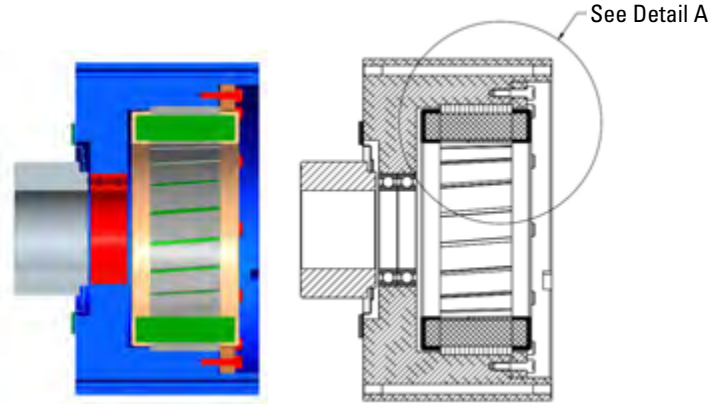
Detail A – Stator/Housing

Mounting and Installation Guidelines

Axial Clamping

For low to moderate torque applications or for applications where the stator may need to be repeatedly installed and removed from the system, axial clamping may be an acceptable option. Kollmorgen does not generally recommend this technique for high shock and vibration applications, extreme temperature applications, or for peak torques greater than 50 Nm without special design consideration. The stator enclosure shown in the illustration below is very similar to the epoxy bonding technique. When using the clamping technique for mounting the stator, the inner diameter of the housing cup should be approximately 0.05 mm - 0.10 mm larger than the maximum outer diameter of the stator. A machined shoulder feature which will serve as a stop point for the stator to bank against when inserted from the open end is recommended. This shoulder dimension should clear the maximum outer diameter of the winding end-turn by no less than 2 mm at all circumferential points. A separate clamp ring with the same circumferential clearance to the winding end turns is placed over the opposite end of the stator and bolted [typically 4 to 12 fasteners, equally spaced] to the housing enclosure. The user should design the enclosure components to ensure that, with the stator installed, an axial clearance gap exists between the clamp ring and the end of the housing at all tolerance conditions. Otherwise, the clamp ring could contact the housing before the fasteners are fully tightened, which



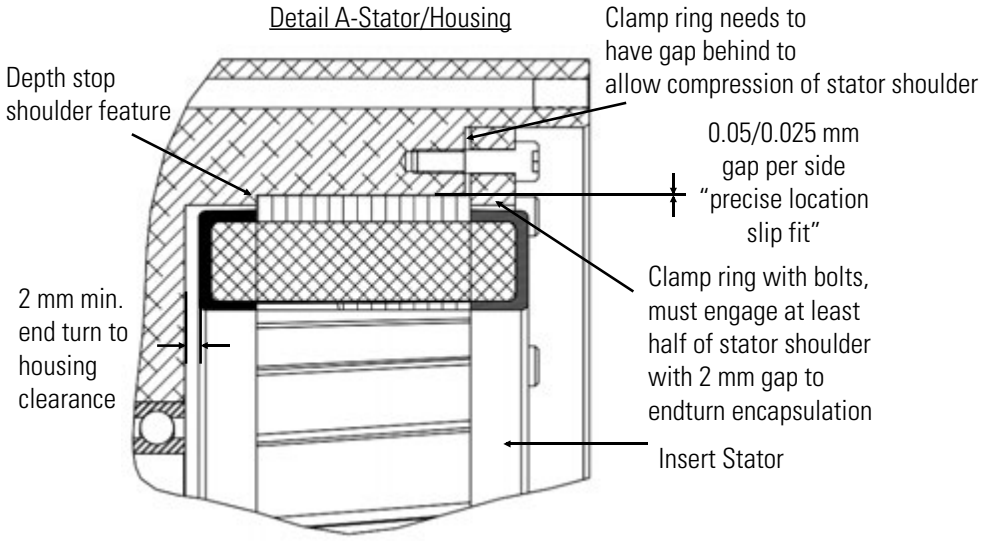


2D view

would result in insufficient axial clamping force against the stator. If desired, the small radial space between the stator outer diameter and the housing inner diameter may be filled with a thermal compound for more efficient conduction to the heatsink. However, use caution to avoid contaminating the axial clamping surfaces with grease that may lead to reduced clamping force. If the user wishes to evaluate this axial clamping technique for motors with higher peak torque ratings, it may be necessary to increase the total surface area of the clamping regions and increase the number of clamping fasteners.

Bolting

Sizes KBM(S)-163XXX and KBM(S)-260XXX are supplied with the stator installed in an aluminum sleeve with flange and through-holes for bolted mounting. User interfaces for these large motors should be designed per the pilot diameters and hole patterns shown on the Kollmorgen model-specific outline drawings. Several of the smaller sizes within this motor family, such as KBM(S)-10XXX through KBM(S)-45XXX range, are also supplied with the stator installed inside an aluminum sleeve, but do not include a stepped flange and are not intended to be bolted in place. For the latter range of sizes, bonding, or clamping techniques described in previous sections are appropriate.



Mounting and Installation Guidelines

Rotor Mounting to Shaft

Kollmorgen's KBM(S) series and other frameless brushless motors utilize high-performance rare earth magnets. Use extreme caution when handling or transporting to avoid injury and product damage. The attractive forces between magnetized rotors and nearby metallic objects can be extremely powerful. Improper handling can result in sudden unexpected impacts. The strong magnetic field can also damage nearby computers, display screens and memory storage devices. Keep the rotor in its shipping container or wrapped protectively until ready to install. This practice will help avoid accidents and prevent contamination such as metallic chips or debris that tend to cling to the magnets.

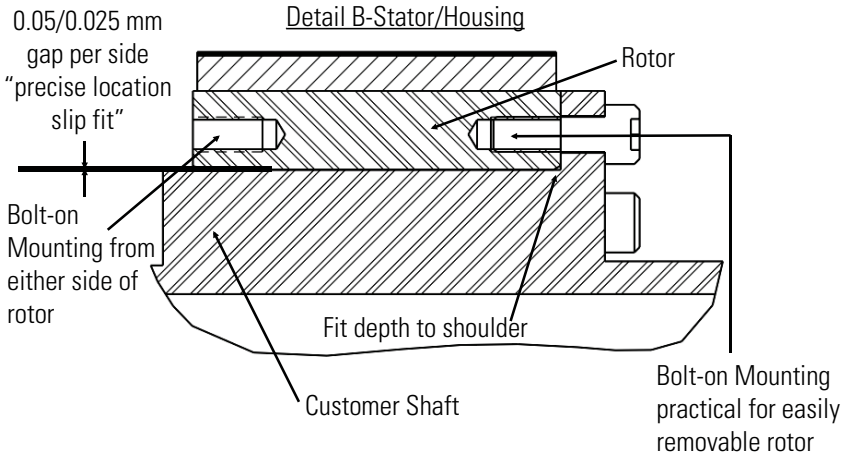
Axial Alignment Control

Kollmorgen's model-specific outline drawings note axial alignment that must be maintained between rotor and stator when mounted to ensure proper motor performance. The user is responsible for designing the rotor shaft, stator enclosure and bearing system to achieve the specified mounting alignment. Machined shoulders on the shaft or grooves for removable retaining rings are common ways of controlling rotor installation position. Maximum diameter of retaining rings or shaft shoulders should be kept below the rotor diameter where magnets are bonded to the steel hub.

Bonding

Generally, for applications where peak torque does not exceed 750 Nm, rotors can be bonded to carbon steel or stainless steel shafts. Retaining compounds, such as Loctite 640 or other similar adhesives, usually require smooth continuous interface diameters and tight fit tolerances. Structural epoxies generally require slightly larger fit clearance to allow a thicker bond line. Epoxies often benefit from grooves in the shaft/rotor interface that function as adhesive reservoirs and may be enhanced by textured machined surfaces via knurling or grit blasting. Always clean the bond joint surfaces thoroughly to ensure good adhesion. Consult adhesive manufacturer for proper bond line thickness, fit tolerances, process details and curing guidelines. To avoid partial demagnetization of the rotor, do not cure rotor/shaft bond joints at temperatures > 82°C unless rotor is nested inside the matching stator or rotor is completely surrounded by a ferrous metal keeper fixture. Contact a Kollmorgen engineer if more information is required on this topic. Before bonding rotors to aluminum shafts, consult with adhesive manufacturer for assistance. A highly flexible adhesive with broad thermal properties may be required.

Bonding example showing the KBM-43X03 rotor:



Axial Clamping

If the user's shaft is designed with a machined shoulder that the rotor can rigidly bank against, the rotor may be axially clamped in place using a locknut. The locknut technique allows the rotor to be installed and removed from the shaft repeatedly, but requires a portion of the shaft to be threaded. Rotors retained by locknuts may be generally suitable for applications up to 400 Nm peak torque, although this estimate may vary greatly depending upon size and type of nut used.

Bolting

The KBM(S)-43XXX and the KBM(S)-57XXX through the KBM(S)-260xx frame sizes are provided with hole patterns in the rotor hub to facilitate bolted mounting. User shaft interface should be designed per the diameter, length, axial position and hole pattern noted on the Kollmorgen model-specific outline drawing. KBM(S)-10XXX through KBM(S)-35XXX and KBM(S)-45XXX models may be ordered with a mounting bolt circle on the rotor as an option.

Pre-selected Bolt Circle Diameters and Bolt size options are provided in Table A below.

Rotor flanges with metric through holes may also be provided as an option for mounting in accordance with Table B below.

	Add Rotor Metric Tapped Holes			
Model	Max ID (mm)	Max Bolt Circle (mm)	Suggested Hole Size	Suggested Hole Qty
KBM10	5	10.5	M2.5X.45	6
KBM14	7	13.5	M3x.5	6
KBM17	17	23.5	M3x.5	8
KBM25	33	41.5	M4x.7	8
KBM35	48	56.5	M4x.7	8

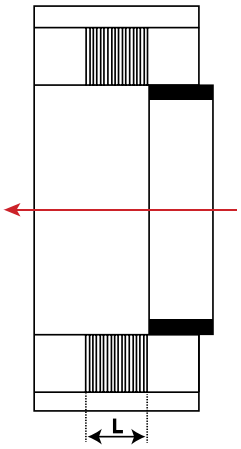
Mounting and Installation Guidelines

Assembly – Installing Rotor Inside Stator

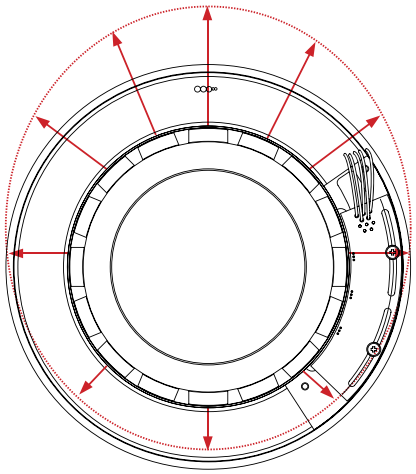
As previously described, magnetic forces can be extremely powerful and may surprise the user when handling or installing the rotor. Extreme caution is required when placing the rotor inside the stator. Data for each KBM model can be determined from the Force Summary Table below.

Radial and Axial forces between Rotor and Stator

When the rotor is off-center with respect to the stator, there are radial forces created that are proportional to the radial eccentricity. The table below gives a summary of these radial forces showing a nominal force per 25 mm of active stack length for each motor series frame size.



Axial Attraction Force Image



Radial Eccentric Force Image

KBM Mounting Force Summary Table

(See the following page for sample calculations using this table.)

Motor Series	Radial Forces (1)	Radial Forces (2)	Axial Force (3)	Axial Force (4)
KBM(S)-10	45 N/mm	2.57 lb_F/0.010"	96 N	22 lb_F
KBM(S)-14	72 N/mm	4.11 lb_F/0.010"	127 N	29 lb_F
KBM(S)-17	241 N/mm	12.33 lb_F/0.010"	169 N	39 lb_F
KBM(S)-25	365 N/mm	18.72 lb_F/0.010"	248 N	57 lb_F
KBM(S)-35	455 N/mm	23.52 lb_F/0.010"	352 N	80 lb_F
KBM(S)-45	613 N/mm	31.52 lb_F/0.010"	450 N	103 lb_F
KBM(S)-43	780 N/mm	39.97 lb_F/0.010"	370 N	84 lb_F
KBM(S)-57	513 N/mm	26.27 lb_F/0.010"	524 N	120 lb_F
KBM(S)-60	310 N/mm	15.99 lb_F/0.010"	761 N	174 lb_F
KBM(S)-79	508 N/mm	26.04 lb_F/0.010"	741 N	170 lb_F
KBM(S)-88	330 N/mm	16.90 lb_F/0.010"	1214 N	277 lb_F
KBM(S)-118	838 N/mm	42.94 lb_F/0.010"	1539 N	351 lb_F
KBM(S)-163	1198 N/mm	61.44 lb_F/0.010"	1777 N	405 lb_F
KBM(S)-260	800 N/mm	41.11 lb_F/0.010"	2613 N	596 lb_F

(1) given in Newtons [N] per mm of radial eccentricity based on an active stack length of 25 mm
(2) given in Pounds-Force [lb_F] per 0.010" of radial eccentricity based on an active stack length of 1.0"
(3) Maximum attraction force when inserting rotor into stator given in Newtons [N] based on an active stack length of 25 mm
(4) Maximum attraction force when inserting rotor into stator given in Pounds-Force [lb_F] based on an active stack length of 1.0"

Radial Force Sample Calculations

Calculation of the radial force [N/mm] can be performed using:

RADIAL FORCE = TABLE VALUE x L/25

where L [mm] represents the active length of the lamination stack [approximate using the length of the KBM-XX rotor "B" dimension]. Example: To determine the radial force per mm of eccentricity for a model KBMS-10X03 [use the rotor length of the KBM-10X03 "B" dimension of 57.89 mm] and calculate as follows:

FORCE = 45 N/mm x (57.89/25) = 104.2 N/mm of eccentricity

Calculation of the radial force [lb_F/0.010"] can be performed using:

RADIAL FORCE = TABLE VALUE x L

where L [inches] represents the active length of the lamination stack [approximate using the length of the KBM-XX rotor "B" dimension]. Example: To determine the radial force per 0.010" of eccentricity for a model KBMS-10X03 [use the rotor length of the KBM-10X03 "B" dimension of 2.279"] and calculate as follows:

FORCE = 2.57 lb_F/0.010" x 2.279" = 5.85 lb_F/0.010" of eccentricity

Axial Force Sample Calculations

Calculation of the maximum axial attraction force [N] can be performed using:

AXIAL FORCE = TABLE VALUE x L/25

where L [mm] represents the active length of the lamination stack [approximate using the length of the KBM-XX rotor "B" dimension]. Example: To determine the maximum axial attraction force for a model KBMS-10X03 [use the rotor length of the KBM-10X03 "B" dimension of 57.89 mm] and calculate as follows:

FORCE = 96 N x 57.89 mm/25 = 222.3 N

Calculation of the maximum axial attraction force [lb_F] can be performed using:

AXIAL FORCE = TABLE VALUE x L

where L [inches] represents the active length of the lamination stack [approximate using the length of the KBM-XX rotor "B" dimension]. Example: To determine the maximum axial attraction force for a model KBMS-10X03 [use the rotor length of the KBM-10X03 "B" dimension of 2.279"] and calculate as follows:

FORCE = 22 lb_F x 2.279" = 50.1 lb_F

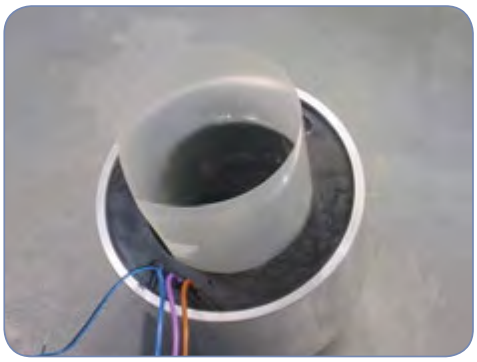
Mounting and Installation Guidelines

Secure the Stator

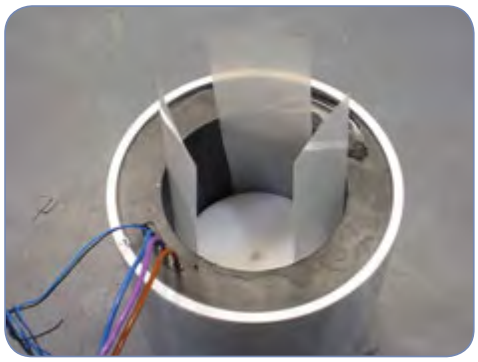
Confirm that the stator is securely mounted, taking into account the force guidelines above before attempting to install the rotor. Kollmorgen recommends taping or tying the lead and sensor wiring bundle aside in a safe position to avoid accidental damage.

Protect the Running Gap Surfaces

If left unprotected, the outer surface of the rotor may stick or "pole" to the nearest point on the inner bore of the stator due to magnetic attractive forces as the user attempts to install it. The resulting friction as the rotor slides along the inside of the stator can potentially damage the rotor band, magnets, coatings or stator bore surfaces. To prevent damage and simplify the rotor installation process, Kollmorgen recommends first installing a thin layer of shim material, such as Mylar ® film, in the stator's inner bore. See photos below for examples. Mylar (DuPont ® Corp. trade name) is a readily available polyester film, often used as electrical insulation or in laminating processes, and is available in a variety of thicknesses. The Mylar film can be installed as a single piece that is wrapped entirely around the circumference of the stator bore and slightly overlapped, or multiple pieces may be inserted axially at equally spaced points. Optimum film thickness and number of shim layers required is dependent upon the gap clearance between rotor and stator for the specific motor size the user is attempting to install. Appropriately thick Mylar film shim layer(s) will keep the rotor roughly centered inside the stator bore and provides a slick surface to slide the rotor to its intended mounting position without damage.



Single Mylar Shim



Multiple Mylar Shims

Installing the Rotor

Many of the KBM(S) series rotors are too large to safely lift by hand and the attractive force as the rotor rapidly enters the stator can be too powerful to control by hand. Kollmorgen recommends using a hoist or small overhead crane to lift the rotor into position and stabilize it for safely controlled insertion into the mechanically fixed stator. Most large KBM(S) rotors include tapped holes in the steel hub for the user to attach eye bolts to facilitate hoist lifting. Note that swiveled eye bolts, as opposed to fixed ring eye bolts, are recommended for safe lifting with hoist chain and hook interface.

Inspect the Running Gap

After the rotor is properly installed and secured, remove all Mylar shim material. Carefully inspect the running gap for any debris or obstructions. If possible, spin the rotor by hand to confirm that it rotates freely.

Installation Assistance

Customers may contact Kollmorgen for assistance with application or installation problems. If desired, Kollmorgen can also design and supply custom motor installation fixtures for the user's unique application needs. Fixture solutions are quoted separately on a case-specific basis.

Performance Enhancements

There are some applications that demand very high torque density that may benefit from specialized cooling of the stator assembly to get significantly increased continuous torque performance. In these applications, Kollmorgen may be able to help with a design for a water jacket or a special air-over cooling package to reduce the winding temperature and increase continuous torque available. Customized cooling solutions are quoted separately on a case-specific basis.
There are also high pressure applications that may benefit from the motor running immersed in a di-electric fluid [hydraulic oil eg: Exxon Univis J-26] to balance the pressure differential in the system. Please consult Kollmorgen to determine the compatibility of the di-electric fluid with our motor material components.

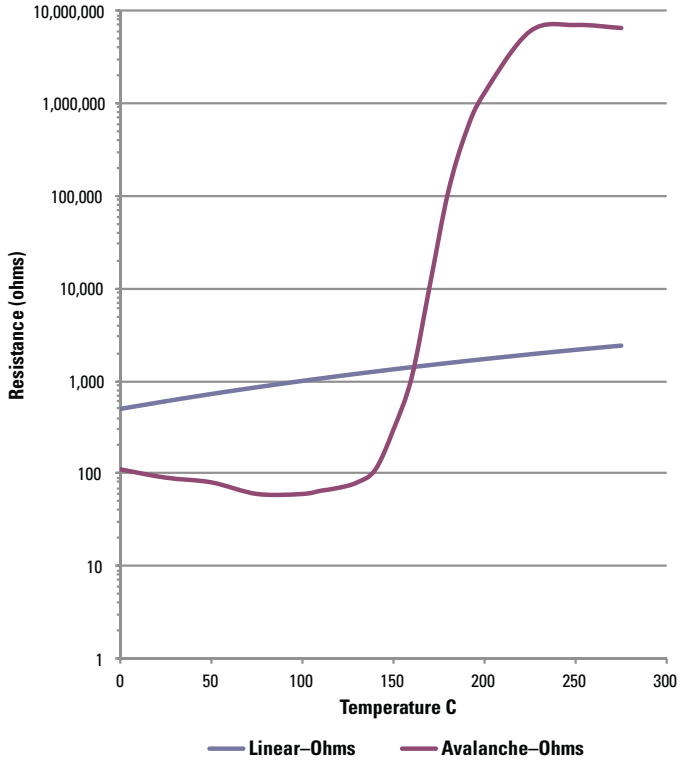
Electrical Wiring Interface

Wiring

KBM(S) series motors are supplied with UL-compliant un-terminated flying leadwires. The user is responsible for proper leadwire routing and connection per the diagrams shown on Kollmorgen drawings. Avoid routing wires across sharp corners, pinch points or edges that may pierce the insulation. Clamp or otherwise secure wire bundle in high vibration applications and avoid wire contact with moving/vibrating surfaces that may abrade the insulation. Provide strain relief for all wire bundles and allow room for a generous bend radius. User assumes responsibility for connector installation, crimping, soldering, shielding, sleeving or any other wire bundling or electrical interface enhancement beyond the configuration shown on the Kollmorgen outline drawing.

Thermistors

To provide for continuous safe operation of KBM(S) series motors in demanding applications, integral thermistors are mounted in the stator. These passive devices provide an output characteristic [Avalanche type] as shown in the side table for use in typical control safety circuits as the temperature goes beyond the rating of the motor windings [155C]. The KBM[S]-10XXX through KBM[S]-35XXX and KBM[S]-45XXX motors all have a single avalanche type thermistor while the balance of the KBM[S] family motors have two or three wired in series or independently depending on the model number. Linear thermistors are optionally available for use in winding temperature data acquisition and exhibit a basically linear resistance characteristic over the operating range of the motor.



Mounting and Installation Guidelines

Wiring Diagram

If the distance between motor and servo drive exceeds 500 mm, it is highly recommended to use shielded cables to ensure proper function and EMC behavior of the system. Refer to the diagram below for a KBM[S] interface to a typical drive system.

Typical KBM(S)/Drive System Interface

Thermistor lead colors and number of leads vary depending on model number. Consult specific model frame size page for further detail.

KBM Frameless Motor Nomenclature

KBM Frameless Motor

KBM(S) - 25 H 01 - A XX

Product Family

KBM = Frameless motor

KBMS = Frameless motor with sensors

Motor Frame Size (Armature I.D.)

10	57
14	60
17	79
25	88
35	118
43	163
45	260

Insulation Ratings

H = High voltage insulation (>240 Vac), S = Low-Voltage insulation (≤240 Vac)
Note: H insulation is standard option for frame sizes 10, 14, 17, 25, 35 and 45.

Stack Length Specifier

00 = 0
01 = 1
02 = 2
03 = 3
04 = 4
05 = 5

Winding Options

Sequential Number for Available Modifications

Available KBM(S) Modifications

The following modifications allow our customers to optimize the base model configuration to meet the unique challenges of their application needs. Please consult Kollmorgen Customer Support for information, pricing, and feasibility of desired modifications. Engineering and soft tooling fees may be required. Additional lead time required.

Speed/Torque Changes	**Generally Available Capability**
• Winding Gages	#00 – #48 AWG *(includes lead wire change)*
• Stack Lengths Available	6.35 mm (0.25 in) to 610 mm (24 in) *(Rotor length, including magnets, will increase or decrease proportionally)*
• Pole Count	6 to 64 Poles
• Magnet Materials	Neodymium-Iron-Boron Samarium Cobalt
Durability/Harsh Environment	
• Rotor Hub Material	Bare Cold-Rolled Steel *(base model)* Corrosion-resistant Stainless Alloy
• Stator Sleeve Material	Bare Aluminum *(select base models)* Stainless or Carbon Steel
• Armature Potting	Encapsulation *(base model)* Varnish Hi-Temp Encapsulation (200°C)
• Corrosion Protection	Dri-Touch Corrosion Inhibitor *(base model)* Nickel Plating, Passivation, Anodizing Epoxy Paint
Installation Features	
• Rotor Hub Geometry	Round, hollow, flanged, keyway, flat Thru bores from 5 mm to 600 mm
• Mounting	Bolt hole diameter and circumferential pattern *(customer specified)*
• Lead Length	400 mm (15.75 in) min *(base model)* 150 mm to 1200+ mm *(customer specified)*
• Lead Colors	Blue / Brown / Violet *(base model)* Other colors to be specified by customer
• Thermal Sensor	Thermistor-Avalanche *(base model)* Thermistor-Linear
• Connector(s)	Flying leads *(base model)* Connector(s) specified by customer

About Kollmorgen

Since its founding in 1916, Kollmorgen's innovative solutions have brought big ideas to life, kept the world safer, and improved peoples' lives. Today, its world-class knowledge of motion systems and components, industry-leading quality, and deep expertise in linking and integrating standard and custom products continually delivers breakthrough motion solutions that are unmatched in performance, reliability, and ease-of-use. This gives machine builders around the world an irrefutable marketplace advantage and provides their customers with ultimate peace-of-mind.

For assistance with your application needs in North America, contact us at: 540-633-3545, support@kollmorgen.com or visit www.kollmorgen.com for a global contact list.
