## **Automation and Motion Control**

Programmable Automation Solutions

**KOLLMORGEN** 

## Kollmorgen: Your Partner, In Motion.

Every solution comes from a real understanding of the challenges facing machine designers and users.

Innovators consistently rate Kollmorgen as one of their best motion systems manufacturing partners. Whether you are looking for classic servo motors, direct-drive servo motors, stepper motors, drives & amplifiers, gearing, actuation, or multi-axis motion controllers, Kollmorgen is one of the few companies in the world that actually designs and manufactures all of these products.

**Our customers** are leaders in many industries such as Aerospace & Defense, Printing, Packaging & Converting, Food & Beverage Processing, Medical Imaging, In Vitro Diagnostics & Laboratory Automation, Pharmaceutical Manufacturing, Material Forming and Cutting, Oil & Gas, and Robotics. Kollmorgen is also a leader in Warehouse Automation, including complete AGV systems, software, awareness and autonomy.

Our Automation Solutions can be found on Mars and in space, ships and submarines, O&G drilling and metrology, surgical robots and laser eye surgery, even inside artificial hearts. These are just a few applications that demand high-performance and high-quality while satisfying their specific needs.

Because motion matters, it's our focus: Motion can distinctly differentiate a specific machine and deliver a marketplace advantage by increasing its performance and dramatically improving Overall Equipment Effectiveness (OEE).

High-performance motion can make your customer's machine more reliable and energy-efficient, enhance accuracy and improve operator safety. Motion also represents endless possibilities for innovation.

We've always understood this potential, and thus have kept motion at our core and in our Vision, Mission & Values, relentlessly developing products that offer precise control of torque, velocity and position accuracy in machines that rely on complex motion.

## KOLLMORGEN

## Removing the Barriers of Design, Sourcing, and Time

At Kollmorgen, we know that OEM engineers can achieve a lot more when obstacles aren't in the way. So, we clear obstacles in three important ways:

## Integrating Standard and Custom Products The optimal solution is often not clear-cut. Our application expertise allows us to modify standard products or develop totally custom solutions across our whole product portfolio so that designs can take flight.

### **Providing Motion Solutions, Not Just Components**

As companies reduce their supplier base and focus their engineering manpower on the product design, they need a total system supplier with a wide range of integrated solutions. Kollmorgen offers complete solutions as well as motion subsystems that combine programming software, engineering services and best-in-class motion components.

### **Global Footprint**

With direct sales, engineering support, manufacturing facilities, and distributors spanning the Americas, Europe, the Middle East, and Asia, we're close to OEMs worldwide. Our proximity helps speed delivery and lend support where and when they're needed.

#### **Financial and Operational Stability**

Kollmorgen is part of Altra Industrial Motion. A key driver in the growth of all Altra divisions is the Altra Business System, which relies on the principle of "kaizen" – or continuous improvement. Using world-class tools, cross-disciplinary teams of exceptional people evaluate processes and develop plans that result in superior performance.

## Kollmorgen: Your partner. In Motion.

# **Automation and Motion Control**

## **Comprehensive Line of Products Offering Complete System Solutions**

### Kollmorgen's comprehensive line of control software and hardware, drives and motors enables you to complete your solutions with one supplier:

Whether you want a stand-alone controller or drive-resident, Kollmorgen's Automation Suite can coordinate up to 64 or more axes, and synchronize the path of up to 32 or more axes per control engine. We offer the industry standard IEC61131-3 programming language, as well as our unique graphical programming environment, Pipe Network.

Flexible single or multi-axis drive solutions in decentralized and central architectures with PCMM, AKD-PDMM and the Kollmorgen Automation Suite™

Our broad range of motor and drive technologies as well as gearing and actuation products interface seamlessly with KAS.

programmable multi-axis master

**HYGIENIC** 

Control of axes with PCMM

Stand-alone

The PCMM multi-axis controller can coordinate up to 64 or more axes, and synchronize the path of 32 or more axes per control engine on AKD family drives via the EtherCAT protocol\*, with extremely precise cycle times of 250 µs. Optionally, an AKI2G control panel using standard Modbus communication protocol can be connected for operating the machine. The PCMM works with leading bus systems, opening up a wide array of control system options. The PDMM motion controller is equipped with an AKD servo drive for direct connection to a motor. The PDMM is ideal for machine builders who prefer an simplified, integrated solution.

\* Maximum axis count depends on motion/automation complexity and performance (20 or more axis possible for low complexity machine at 1 kHz network update rate, 8 axes based on medium complexity machine at 4 kHz network update rate.)

## **Diverse and Scalable Drive Solutions**

Need more axes? Different motor types? Linear direct drives here, direct drives with no housing there? No problem! With the EtherCAT<sup>®</sup> system bus you can connect more AKD family servo drives and add motors of all performance classes from the Kollmorgen product range.

Interfaces are frequently the bottleneck in system design, but not so with Kollmorgen Automation Suite (KAS). With Advanced Kollmorgen Terminals (AKT2G) I/O and the EtherCAT<sup>®</sup> bus coupler, you can build a flexible interface system which meets all of your requirements.

Control and monitor the processes on the machine with the AKI2G series touch panels. With the Kollmorgen Visualization Builder (KVB), you can program ergonomic user interfaces and display machine data clearly.

# Kollmorgen Automation Suite™

Kollmorgen's machine automation platform dramatically simplifies how you approach the many complex automation challenges of today's machines. We have created an integrated development environment (IDE) that greatly simplifies programming and system configuration and combines multiple tools into one intuitive platform, we have global support and experienced engineering services to solve your biggest challenges, and our best-in-class automation and motion components deliver unparalleled motion performance; all of which combine to help you create a differentiated machine, get to market faster, and have the comfort and ease of collaborating with just one vendor.

**Integrated Development Environment** – Quickly and easily design, refine and troubleshoot all of a machine's automated solutions in this highly intuitive application featuring a single programming environment that provides great flexibility and control.

**Engineering Services** – A Kollmorgen representative establishes a collaborative, consultative relationship from the beginning by assessing needs and objectives. Field engineers and application engineers constantly support the design and build phase as well as the factory installation phase to ensure that your needs are met from concept to production. Additional services are available that include development, on-site deployment, and training.

Best-in-Class Automation and Motion Components – With Kollmorgen, there's security in knowing the necessary components that form the building blocks of a machine are always available. No one offers a wider range of standard, modified standard and custom products. Motion is at the core of our Automation Suite, where others in the industry consider it an add-on.

Kollmorgen Co-engineering – More than a solutions provider, we co-engineer a better fit with your company using both products and services. From a wide breadth of product modifications, over 500,000 standard options on our AKM family motor line, to aftermarket revenue protection and training programs, Kollmorgen co-engineering helps you differentiate your machine and business.

We accept your challenges as our own. That's the Kollmorgen co-engineering difference.

### 

High machine performance	»Up to 25% greater throughput
	»Up to 50% scrap reduction
	»Improved accuracy
	»Advanced drive technology for machines with outstanding performance
Fast to market	»Up to 30% reduction in development time – Motion in Minutes
	»Services available for program development, training, start-up, and support
	»Industry standard programming environment and industrial networks
Enhanced ease-of-use and integration	»Single integrated programming environment for automation, drive technology, and all hardware
	»Drag-and-drop motion programming
	»Certified components that are tested to work together
	»Seamless integration and configuration of drives for optimal set-up
A demonstrated solution	»The result of over 25 years of optimizing, programming and implementing automation and drive solutions
	»Integrates the diverse experience of the suppliers and platforms that form today's Kollmorgen
	»Used successfully for more than 15 years

# **Scalable Programmability**

Kollmorgen delivers cutting-edge technology and performance with the AKD<sup>®</sup> family servo drives and KAS controls platform. Whether your application requires a single axis or over 100 synchronized axes, Kollmorgen's intuitive software and tools scale to meet your needs. From simple analog torque control to the latest highperformance automation network, AKD servo drives pack power and flexibility for virtually any application into one of the most compact footprints of any digital servo drive in the industry.

»Patented auto-tuning delivers optimized performance in seconds.

- »1.5 MHz current loop and 16 KHz velocity loops offers greater bandwidth and performance Optimized performance in seconds

#### **Analog Control**

- » Controlled by analog torque-and-velocity commands
- » Includes electronic gearing via X9 connector

#### Motion Tasking ("P" Option)

- »Adds simple point-and-click indexing to base drive
- »Provides user with pre-programmed options
- »Guides novice user through simplified steps to create indexing moves
- » Network connectivity to EtherCAT®, CANopen®, Profinet® RT, Ethernet/IP™, TCP/IP, SynqNet® and others
- »MODBUS port for communication with HMI

### BASIC Programmable 1.5 Axis Drive ("T" Option)

- »Adds BASIC programmability to base AKD
- »4 Khz programmable interrupt service routines
- »Conditional statements, built-in math functions, user functions and subroutines
- »Same package size as base drive
- » Optional integrated SD card for easy backup and drive cloning
- »Includes electronic camming functionality

**Basic Operation** 

Single-Axis Programming

## RANGE OF KOLLMORGEN **AUTOMATION SUITE CAPABILITIES**

#### **AKD2G Multi-Axis Drive**

- »Adds dual axis capability with analog, electronic gearing, step-and-direction, motion tasking and motionbus operation modes
- »Adds dual channel STO for each axis
- »Option to add 4 Safe Inputs and integrated SafeMotion including FSoE, SS1, SDB, SBC/ SBT, etc.
- »Optimized for single cable technology
- »Modular design offers quicker customization capability
- »Improved graphical display (160x128-pixel)
- »Single axis variant is available

## AKT2G I/O

#### Programmable Drive Multi-Axis Master PDMM ("M" Option)

- »Scalable solution for use as a single axis drive or multi-axis drive controller with integrated programmable automation capability
- »Choose from all five IEC 61131-3 languages for soft PLC process programming
- »Program motion using your choice of PLCopen for motion or our innovative Pipe Network™
- »4 KHz PLC scan rate and EtherCAT® updates
- »Complete line of HMI panels with integrated software to simplify GUI development
- » Exclusive function blocks, such as "wait," enable your program to act as a scanning or sequential language
- »Connects to AKT<sup>™</sup>2G network I/O for nearly unlimited expandability

#### Seamlessly add additional axes. PCMM serves as a high-performance multi-axis machine controller.

- »SD card for easy backup and system updates
- »IoT-enabled integrated webserver for diagnostics and troubleshooting from any computer or mobile device
- »Provide true synchronized-path control of up to 32 axes
- »Reduce cabinet size and wiring requirements with a single, compact package
- »Easily manage remote I/O and the I/O of all attached drives via EtherCAT®
- »Use industry standard PLCopen for motion, or choose Kollmorgen's Pipe Network<sup>™</sup> to program sophisticated camming and gearing applications in a matter of minutes

## <mark>∞ ●</mark> Pipe Network<sup>™</sup> Kollmorgen Visual Motion Programming

- »Accelerate development by programming tasks in hours that would otherwise take weeks
- »Improved coding quality through visual programming and by using pre-built modules that have been extensively tested and optimized
- »Easy knowledge transfer, replacing pages of complex code with easily understood graphical representations
- »Available on PCMM and AKD PDMM controllers

Pipe Network provides a one-to-one translation of a mechanical system into a logical world as shown in the Vertical Form Fill and Seal machine above. Click and build your motion program in minutes, or contact Kollmorgen for examples of common machine architectures to further accelerate your development.

 $\rightarrow$ 

**Dual-Axis Programming** 

## Development

A fully integrated development environment (IDE) provides the tools you need to develop everything from PLC and motion programs to HMI and device setup – all in one place. It's easier to learn and use, eliminates the need for multiple programs and data stores, and helps you bring a higher-quality machine to market faster.

## Integrated Development Environment (IDE)

- » Fully integrated programming environment incorporates standard IEC61131-3 compliant tools.
- » Use the network configurator and predefined user blocks to streamline development and ensure programming quality.

Our IDE offers two powerful programming methods and a complete set of tools for simulating, testing and optimizing motion.

### **Embedded Motion**

Choose PLCopen for motion if you already use this industry standard in your existing products, and want to continue using it within the Kollmorgen Automation Suite programming environment.

### Integrated Tools

Scope motion parameters to fine-tune performance and synchronization, portrayed with up to eight channels and flexible mapping of variables.

Embedded wiring diagrams and oneclick I/O variable mapping makes drive integration easy.

One-click motion simulation using virtual axes alongside real axes for quick development and implementation.

# O Pipe Network Kollmorgen Visual Motion Programming

Choose Kollmorgen's exclusive Pipe Network<sup>™</sup> for the quickest, easiest way to represent mechanical systems in software – using drag-and-drop tools to create an intuitive visual representation.

Complete motion system configuration from one location with embedded AKD Workbench allows configuration of all servo drives over EtherCat<sup>®</sup>.

# Lifecycle

Kollmorgen is committed to helping you maximize the productivity and profitability of your machine across an extended lifecycle. Design and build today, with confidence for a full return on investment for years to come.

## **Continual Development Testing**

Kollmorgen develops, tests, and continually validates all new products to ensure compatibility and performance in the Kollmorgen ecosystem.

## **Maintenance Support Tools**

Our tools give end-users the ability to remotely verify continuous operation and communicate issues effectively.

Built-in, mobile-ready webserver provides performance information with no software required

## Software and Hardware Security

Password protection for source code and hardware connectivity provides security for both OEMs and end-users.

- ✓ Protect source code
- ✓ Protect network access

# Software PLC

## Easy-to-Use, Auto-Discover, Auto-Recognize, Auto-Configure, Scope, CAM, IEC 61131-3 PLC

» Kollmorgen Automation Suite<sup>™</sup> offers a set of tools that is familiar to automation programmers, but has enhancements like predefined motion blocks and visual diagnostics tools.

## IEC 61131-3 **Toolkit Features**

- » IEC-61131-3 engine
- » Re-compile while running animated variables
- » Industry and application Specific Function Blocks » 8-channel Real-Time Oscilliscope
- » PID temperature control block
- » Debugger Tools with Watch window
- » The environment for developing PLC programs has been created with an emphasis on speed. Recognize and configure motion control components to accelerate systems development. With auto-recognize and auto configure features, testing efforts are reduced.
- » Once an application or a function block has been created for a given application, the user can store this as a "user-defined function block" to promote reuse of tested software in subsequent projects to save time.
- » Maintain your standards in corporate programming languages by using any of the IEC 61131-3 languages. In fact, enhance it further by mixing and matching languages to deliver the best solution for the application.

unction Block Diagram (FBD)

All five IEC 61131-3 PLC languages are supported

» Kollmorgen Automation Suite's integrated development environment (IDE) allows the developer to create solutions without having to connect a single device by using the offline simulator. Start creating systems before the first hardware component is delivered. Simply configure your system network in "offline development" mode and change the status of the devices one-by-one when you actually connect them.

Simulator with PLC simulation and motion

Automatic I/O variable creation with scope definitions Adding bus couplers with I/Os onto a motion network topology

- » Standard debugging features like "step into", "step over", etc. are available to troubleshoot programs. In addition, debug your code using the soft oscilloscope and continuously plot up to 8 variables at network update rates the display can also be configured to suit the scale that the developer desires.
- » Our CAM editor lets you create complex CAM profiles using a graphical interface. When converting, it is also possible to import existing CAM profile points into the CAM editor to allow you to seamlessly reuse your existing profiles.
- » CAM-on-the-Fly lets you change CAM profiles based on network inputs or changes in machine conditions.

Graphical environment for creating CAMs

# **Motion Programming**

Our motion control solutions are backed by Kollmorgen's vast experience solving application-specific problems for the many industries we serve. Kollmorgen Automation Suite<sup>™</sup> offers advantages that have helped our customers accelerate the development of more precise, high-performance motion.

### For example:

## Superior machine synchronization, with motion-optimized runtime engine and deterministic EtherCAT<sup>®</sup> network:

- » IEEE1588 distributed clock correction
- » Hardware-based synchronization
- » PLC code execution at EtherCAT<sup>®</sup> update rate, eliminating process delay
- » Low hardware latency

## Flexible profile generation, allowing problem-solving through multiple methods branching out of standard prepackaged tools:

- » Pre-loaded and user-defined motion blocks optimized for specific industries and applications
- » Configurable through Pipe Network<sup>™</sup> and PLCopen for motion

## **Motion Capabilities**

- » Absolute and incremental moves
- » Jerk-limited moves (S-curve)
- » CAM profiles (static or with "on-the-fly" profile changes)
- » Gearing (EtherCAT® synchronized)
- Multiple high-speed registration methods (FPGA-based capture engine)
- » Homing
- » Tension control based motion
- » Motion-based functional safety
- » Superimposed moves
- » Phase adjust
- » Multi-axis interpolated motion

Program motion quickly and intuitively with our Pipe Network<sup>™</sup> graphical programming language. Or choose the industry-standard PLCopen for motion to easily reuse your existing programming resources.

### Pipe Network<sup>™</sup> Visual Programming Environment

Our innovative Pipe Network<sup>™</sup> programming environment provides a visual, drag-and-drop model of your machine's motion, including complex axis and cam relationships.

### Program Tasks in Hours Instead of Weeks:

- » Intuitive visual programming with a library of prebuilt modules.
- » Easy knowledge transfer, replacing pages of complex code with easily understood graphical representations

## PLCopen for Motion

The Kollmorgen Automation Suite<sup>™</sup> IDE incorporates PLCopen for motion, a widely accepted open industry standard.

In the example shown here, PLCopen for motion is used within the Kollmorgen Automation Suite IDE to precisely control axis position based on registration marks:

# **PCMM<sup>™</sup> Stand-Alone Controller**

## Powerful Motion Controller in a Small and Simple Package

The PCMM programmable motion controller delivers the same features as the drive-integrated AKD<sup>®</sup>-PDMM controller, but in a stand-alone package that offers flexibility when used with AKD<sup>®</sup>-N/C decentralized drives and for machines where the benefits of an integrated drive and controller are not required.

Ideal for OEM's that want to reduce cabinet space and machine complexity without sacrificing performance. The PCMM delivers full PLC functionality, a high-performance motion control and EtherCAT<sup>®</sup> master in one small package that easily installs in any electrical panel.

Programming is simplified using the KAS IDE which includes PipeNetwork<sup>™</sup> visual programming, one-click simulation, as well as integrated configuration and diagnostic tools. The PCMM with KAS IDE simplifies machine development and helps you get to market faster.

## **General Features and Specifications**

Processor	Available with 1.2GHz (single or dual core option) or 800MHz CPU
Internal Memory	64 MB Flash memory for program storage
External Memory	Removable SD card (not included)
Input Power	24 Vdc @ 1.25 A
Operating Temperature	0 °C - 40 °C
Sealing	IP20
Local I/O	6 digital inputs, 2 digital outputs
Motion Network	EtherCAT <sup>®</sup> , max 4kHz update rate
PLC Programming	IEC-61131-3, support for all 5 languages
Motion Programming	PLCopen or PipeNetwork®
HMI Programming	KVB programming for AKI2G panels
Dimensions	174mm (H) x 46.6mm (W) x 111.5mm (D)
Certifications	CE / UL

Part Number	Processor	Code	Axes Capacity	Synchronized Axes
AKC-PCM-MC-080- 00N-00-000	800 MHz Standard Multi-axis Controller	MC	8+	4+
AKC-PCM-M1-120- 00N-00-000	1.2 GHz High Performance Multi-axis Controller	M1	32+	16+
AKC-PCM-M2-120- 00N-00-000	1.2 GHz Dual-core High Performance Multi-axis Controller	M2	64+	32+

Note: these are axis count estimates which are impacted by cycle update rate and motion complexity.

AKD<sup>®</sup>2G Servo Drive

### **PCMM<sup>™</sup> Hardware Features**

- » Up to 1.2GHz CPU meets the performance requirements for a broad range of machines
- » Control 1 to 30 or more axes with a single controller
- » 100BaseT connection supporting TCP/IP, MODBUS<sup>®</sup>, EthernetIP<sup>®</sup>, Profinet<sup>®</sup> to host PLC, computer, or network to easily interface with most manufacturing systems
- » Cycle times as low as 250  $\mu s$
- » Alphanumeric display for fast diagnostics and system troubleshooting
- » Removable SD memory card for simple backup/restore and file storage
- » On-board digital I/O with support for expansion I/O via  $EtherCAT^{\scriptscriptstyle (\!8\!)}$
- » Compact size reduces cabinet space and cost

## **PCMM<sup>™</sup> Software Features**

- » IEC 61131-3 programmable automation and motion controller
- » EtherCAT<sup>®</sup> master for high-performance motion and device synchronization
- » PipeNetwork<sup>™</sup> motion engine for visual programming
- » Embedded RTOS for guaranteed performance and stability
- » Integrated webserver for remote diagnostics and status checking
- » Ideal design for modular machines and flexible manufacturing systems

## **PCMM<sup>™</sup> System Integration**

- » Seamless integration with Kollmorgen's AKD<sup>®</sup> family servo drives, AKM<sup>®</sup> family rotary servo motors, AKI2G HMIs, and AKT2G fieldbus I/O terminals for a complete automation solution
- » Network communication via OPC, MODBUS<sup>®</sup>, TCP/IP, UDP, and common fieldbuses for fast integration into your machine or factory
- » Intuitive EtherCAT<sup>®</sup> configuration tools built into KAS IDE simplifies network configuration
- » Integrated Kollmorgen Workbench for rapid servo tuning and machine optimization

AKM<sup>®</sup> 2G Servo Motor

# **Real-time Motion Bus**

## EtherCAT° Real-time Bus for Motion and I/O Connectivity

- » Auto-recognition of Kollmorgen Automation Suite-compatible components
- » Guaranteed real-time update cycle down to 250 microseconds.
- » Supported by 2000+ member companies
- » Standard Ethernet cabling = lower implementation cost
- » Interoperability with other buses
- » Wide availability of devices

### **EtherCAT® Performance Overview**

Process Data	Update Time
256 distributed digital I/O	11 µs = 0.01 ms
1000 distributed digital I/O	30 µs
200 analog I/O (16 bit)	50 µs – 20 kHz
100 Servo Axis, with 8 Bytes input and output data each	100 µs
1 Fieldbus Master-Gateway (1486 Bytes Input and 1486 Bytes Output Data)	150 µs

Transparent for all Ethernet protocols

Versatile network architecture

# Human Machine Interface (HMI)

## Kollmorgen HMI Panels

With Kollmorgen HMI's visualization projects can be scaled for different size screens and performance demands without having to re-write code or learn different tools.

- » Choose from 5", 7", and 12" displays
- » IP65 protection class screen for easy cleaning
- » Rugged Plastic or Aluminum Housing

### **AKI2G-CDA Series**

### 5", 7" Touchscreen HMI

Our basic industrial HMI offers a high resolution touchscreen and modern design. The panel combines IP65 corrosion resistant plastic housing with the full version of Kollmorgen Visualization Builder, providing a costeffective yet advanced HMI solution for small to medium applications. The basic AKI2G model is the choice for a cost-efficient, high value, reliable HMI panel.

### **AKI2G-CDB Series**

## 7", 12" Touchscreen HMI

Our advanced AKI2G series HMIs offers a choice of high performance industrial panels designed for demanding applications. All come with high-performance processors, the latest screen technology and a wide range of connectivity options to cover all your automation needs. We recommend our advanced high-performance HMI for all applications.

## **HMI Software Tools**

### Kollmorgen Automation Suite Visualization Builder<sup>™</sup> HMI Software

Kollmorgen Automation Suite Visualization Builder operates from within the Kollmorgen Automation Suite integrated development environment making it quick and easy to create your HMI program and transfer it to the panel.

### **Features include**

- » Automatic mapping transfers PLC variables to HMI tags avoiding mistakes and saving time.
- » Multi-screen navigation
- » Trending/Data Logging
- » Recipes
- » Alarm management
- » Drag and Drop programming
- » Password Protection

HMI developer environment

# AKT2G I/O Terminals

### Advanced Kollmorgen Terminal (AKT)

Kollmorgen Automation Suite<sup>™</sup> includes an array of I/O options for applications that need more I/O than can be provided by the onboard I/O of the drives or for applications that need specialized functionality such as thermocouple management through I/O. The DIN rail mount IP20 terminals simply slide together and connect to the system's EtherCAT<sup>®</sup> bus where they are autorecognized for easy configuration.

### **Typical Bus Coupler**

EtherCAT<sup>®</sup> bus coupler

#### Available Motion Bus Coupler Model

AKT2G-ECT-000-000	EtherCAT <sup>®</sup> Bus Coupler
Available Analog Input	t Terminal Models
AKT2G-AN-430-000	4 channel analog input terminal, 10/0+10 V, -20/0/+4+20 mA
AKT2G-AN-240-000	2 channel analog, RTD input, temperature input module
AKT2G-AN-400-000	4 channel thermocouple input terminal
Available Analog Outp	ut Terminal Models
AKT2G-AT-410-000	4 channel analog output terminal, 0-10 Vdc
AKT2G-AT-425-000	4 channel analog output terminal, -10 V to +10 V
Available Digital Outpu	ut Terminal Models
AKT2G-DT-008-000	8 channel digital output terminal, 24 Vdc, 0.5 A
AKT2G-SDO-004-000	4 channel safe digital output terminal, 24 Vdc, 0.5 A

#### **Typical I/O Terminal**

#### Available Digital Input Terminal Models

AKT2G-DN-002-000	2 channel Up/down counter 24 Vdc, 100 kHz, 32 bit
AKT2G-DN-008-000	8 channel digital input terminal, 3 ms
AKT2G-DNH-008-000	8 channel digital input terminal, 10 µs
AKT2G-SDI-004-000	4 channel safe digital input terminal, 24 Vdc
Available Specialty Terr	minal Models
AKT2G-EM-000-000	End terminal
AKT2G-PSF-024-000	Bus feed terminal, 24 Vdc, fused
Stepper Motor Drive T	erminal
AKT2G-SM-L15-000	Stepper Motor Drive Terminal, 24 Vdc, 1.5 A
AKT2G-SM-L50-000	Stepper Motor Drive Terminal, 50 Vdc, 5 A
AKT2G-BRC-000-000	Brake Chopper Terminal
Encoder Interface Terr	ninals
AKT2G-ENC-180-000	1-channel incremental encoder interface, 32 bit
AKT2G-ENC-190-000	Incremental encoder interface with differential input, 16/32 bit

# Kollmorgen Developer Network

Kollmorgen Developer Network (KDN) is the central location for engineers to quickly get support on all Kollmorgen products, interact with and learn from the larger Kollmorgen user community, and receive expert instruction from Kollmorgen Applications Engineers and staff.

### Ask a Question

Ask a question, or search and respond to existing questions. Provide an answer, or vote on the best answer. Leverage the global scope of Kollmorgen to get up to speed quickly.

### Start a Discussion

Want to share a best practice, get feedback, or understand how others are solving similar problems? Start a new discussion, or join an active one, to share in the collabrative experience and knowledge of Kollmorgen product developers.

### **Propose a Feature**

Have an idea for a new product, or feature? Submit it here. Customers speak and we listen. We know one size does not fit all. Our product is flexible, but sometimes differentiation requires a collaborative approach.

### **Latest Downloads**

Keep up with our continually improving product, with access to the latest downloads.

# Kollmorgen Servo Drive Overview

## AKD<sup>®</sup> Product Family

Kollmorgen offers an extensive range of servo drives, designed to provide precise control, optimum torque and a rich feature set to complement our wide range of rotary servo motors and linear positioning systems. The AKD product family of servo drives offer the broadest connectivity with the most advanced control technology, simplified commissioning and compact packaging available in the global marketplace.

Kollmorgen servo drives are commonly paired with our broad lineup of Kollmorgen servo motors offering plugand-play compatibility. They are also well suited to run with most servo motors on the market due to flexible setup software and support for the most popular feedback devices (including resolvers, incremental encoders, BiSS, EnDat<sup>®</sup>, HIPERFACE<sup>®</sup>, and sine encoders).

The AKD product family offers a range of drive-resident safety functions increasing machine safety, while improving operator ergonomics and machine throughput.

The AKD product family offers several variants supporting centralized control panel architecture including single and dual axis drives, programmable and drive-resident controllers, minimizing panel space requirements and maximizing performance. For those applications that need IP67 drives outside a control panel, or have extensive cabling lengths from the machine to the control panel, the AKD-N is great decentralized option for machine builders to design the optimal cost effective machine.

Our premier KAS machine automation solution brings together a highly integrated and intuitive software programming environment, best-in-class motion components and exceptional co-engineering services to help you build highly differentiated machines. Kollmorgen Automation Suite<sup>™</sup> (KAS) has proven to dramatically accelerate development time, increase machine throughput, reduce scrap and increase overall equipment effectiveness (OEE). AKD product family drives can connect to Kollmorgen's PCMM, an EtherCAT<sup>®</sup> master controller, which is programmed through KAS using industry-standard IEC 61131-3 PLC programming toolkit controlling 64 or more axes.

Notes:

1: Add EtherCAT multi-axis master, PCMM, to the AKD drive family to enable remote I/O expansion via EtherCAT. PCMM controller functionality is built into the PDMM

2: SafeMotion includes FSoE, STO, SS1, SS2, SOS, SDB, SBC/SBT, SLS, SSR, SSM, SDI, SAR, SLA, SLI, SLP, SCA up to SIL3 / PLe

3: Single cable optimized means one single cable for power & motor feedback with 1 connector at motor end and 1 connector at drive end 4: Higher power variants under development in some models. Consult factory for availability.

5: Consult factory on connectivity options for AKD2G. Profinet and Ethernet/IP will be added in 2021

6: Optional integrated SD card for easy backup and drive cloning

# AKD<sup>®</sup>2G Servo Drive

# The newest member of the AKD family is our most powerful yet.

Along with increased power, the AKD2G is simplified and includes integrated SafeMotion<sup>™</sup> that increases Ease-of-Use.

The new AKD2G servo drive introduces the Kollmorgen Servo on a Chip<sup>™</sup>: A powerful compute engine that can control two axes simultaneously and up to 28 I/O. While we were at it, we streamlined the design by optimizing the AKD2G for single-cable motors.

## The Benefits of AKD<sup>®</sup>2G Servo Drives

Flexible	<ul> <li>» One and two axis variants available</li> <li>» Modular design allows the user to specify only the features needed</li> <li>» Supports a variety of feedback devices. SFD3 &amp; HIPERFACE® DSL standard; optional feedbacks include EnDat, BiSS, Analog Sine/Cos encoder, incremental encoder, resolver and more</li> <li>» Multiple bus choices for system optimization, including EtherCAT® &amp; FSoE, CANopen®, PROFINET® IRT and Ethernet/IP™</li> <li>» Over-voltage, current, and temperature detection provided for added dependability</li> <li>» Optional SafeMotion Monitor™ (SMM™), up to SIL3/PLe</li> <li>» Dual-channel STO for each axis (up to SIL3/PLe)</li> <li>» Optionally available with coated PCBA</li> <li>» Industry-leading power density for greater flexibility in mounting</li> <li>• Fits into a 10 inch [25.4 cm] deep control panel</li> </ul>
Easy to Use	<ul> <li>» Plug-and-play compatibility with Kollmorgen controls and motors</li> <li>» WorkBench GUI, acclaimed for customer experience and usability</li> <li>» Hybrid motor-power connector is optimized for single-cable motors; No adaptors, no D-subs, no splitters</li> <li>» Cage-clamp spring terminal connectors on I/O allow for fast and easy installation</li> <li>» Optically isolated I/O reduces noise and eliminates need for additional hardware</li> </ul>
Fast	<ul> <li>» Accommodates changing load conditions immediately:</li> <li>Current loop updates in 1.28 µs, nearly 50x the speed of our nearest competitors</li> <li>Velocity and position loops lead the market at 62.5 µs and 125 µs, respectively</li> <li>» Servo on a Chip<sup>™</sup> includes dual-core ARM<sup>™</sup> A9, 800 MHz µP, 1.5 M gates</li> <li>» AI-based auto-tuning with a click of a button gets you started quickly</li> <li>» Wizard-based tuning uses advanced Bode plot tool to help you efficiently manual-tune when desired</li> <li>» Fast data acquisition with TCP/IP Ethernet service channel</li> </ul>

# AKD<sup>®</sup> 2G Servo Drive

## **AKD2G Means Unparalleled Connectivity**

### Base Model

The base model of Kollmorgen's AKD2G includes all of the performance described previously, and is optimized to interface to a single-connector motor with Kollmorgen's Smart Feedback or HIPERFACE® DSL. It also offers 16 I/O, 160x128-pixel graphical display, removable SD card, and your choice of motionbusses.

### Extended I/O Variant

The extended I/O variant offers everything on the base model, plus I/O expansion. It adds additional 12 I/O for a total of 28 I/O. The option fit in the same package as the base model.

### Two-cable feedback option

Needing support for non-single-cable feedback like EnDat, BiSS or incremental encoders? The two-cable feedback option adds a 15-pin SUB-D connector for dual cable feedback or dual-loop operation.

### SafeMotion<sup>™</sup> Monitor (SMM<sup>™</sup>)

The Extended I/O model is offered with the optional SMM. The SMM converts some of the I/O into "Safe" I/O, and allows the drive to interface safely to an FSoE master. Again, these options fit in the same package as the base model.

Dual-Axis AKD2G 480 Vac (shown with optional feedback and I/O expansion)

Dual-Axis AKD2G 240 Vac (shown with optional SMM, feedback and I/O expansion)

## SafeMotion™

## Second Generation SafeMotion Improves Productivity

Why should a whole production line be brought to a standstill during user interventions when only one part of it is affected? Kollmorgen has put the idea of building drives with SafeMotion that integrates the safety logic and monitoring within the drive. Without compromising on safety, SafeMotion can achieve considerably higher productivity and offer more flexibility when adjusting to new requirements.

Higher productivity	Motion Safety enables user interventions in running processes Safe motion instead of safe deactivation
	Risk-dependent triggering of safety functions
Low system costs	Optimal adjustment to requirements due to modular structure
	Wide range of standard products
	Safety control and drive monitoring in one device
Flexible	Modular concept and simple upgrade of existing drives
	Seamless transition from hardwired to configurable safety logic
Simple and fast implementation	Important motion-related safety functions are integrated
	Predefined safety function blocks
	Intuitive tools for programming and parameterization in the field by the customer

## Safety Logic and Drive Monitoring Integrated within the Drive

### Quickly Integrate AKD2G Into Your Automation System

#### Easy to Use

- Workbench or FSoE master tool:
  - Easy configuration and troubleshooting
  - Simplified commissioning & troubleshooting
  - · Simple field drive replacement

### Flexible & Seamless Integration

- Easy connectivity to simple safety relays or to FSoE master
- Standalone safety without additional safety control
- Central SafeMotion parameter storage in the PLC

### **Innovative SafeMotion**

- Single cable technology with optional safe encoder
- Optional Safe EnDAT<sup>®</sup> high-accuracy e.g. with linear feedback
- Quick (~ms) response to critical events
- Extended safety functions like Safe Dynamic Brake (SDB) and Safe Brake Test (SBT)

### **Productivity Gains with Motion Safety**

Safety functions for areas with dangerous motion are activated when intervening in a running process. With intelligent safety functions, motion sequences are controlled so that each motion is safe. For example, this is performed through position monitoring and restricting the range of motion or by increasing the cycle times. Parts of the machine that do not constitute a risk to the user are not affected. The graph clearly shows the productivity gains when using Kollmorgen's Motion Safety technology.

### Kollmorgen – your Competent Partner for Safe Drive Solutions

As the leading manufacturer of electrical drive technology, Kollmorgen boasts extensive expertise gained from thousands of drive projects around the world. Safety logic, servo drives, motors, through to complete automation solutions – Kollmorgen supplies coordinated components for safe drive solutions, all from one source. Whether it is a standard implementation or a new development as part of a co-engineering project, make use of Kollmorgen's innovative capacity and experience for developing your safe drive.

Drive monitoring

Safety logic

## SafeMotion™

## Extensive Safety Functions for SafeMotion, tailored to your needs.

### Option 1 – STO hard-wired

### STO (Safe Torque Off)

STO safely interrupts the power supply to the motor in the servo drive. The motor becomes torque-free.

STO - Safe Torque Off

### **Option 2 – Safe Stopping Functions**

### STO (Safe Torque Off)

STO safely interrupts the power supply to the motor in the servo drive. The motor becomes torque-free.

STO - Safe Torque Off

### SBC (Safe Brake Control), SBT

### SBC (Safe Brake Control)

SBC provides safe signals for controlling external and internal holding brakes. **SBT (Safe Brake Test)** (non-standardized) Test function for external brakes and the internal motor holding brake.

### SS1<sup>1</sup> (Safe Stop 1 – Time Monitored)

The axis is brought to a standstill by controlled braking. Then the power supply to the motor is safely interrupted and the motor becomes torque-free.

### SDB (Safe Dynamic Brake)

When SDB is triggered, the energy stored in the moment of inertia of the rotating mass is converted into heat energy via a braking resistor in or at the drive. The delay time to standstill is shorter than during normal coasting (STO).<sup>2</sup>

1. SS1 if faulted is the default setting. Users can easily configure this or other actions in WorkBench.

2. The deceleration is not controlled. External forces such as vertical loads can keep the motor spinning longer.

### Possible Example System: Safe Dual-axis Drive with....

AKD2G safety concept: The SMM™ option equips the AKD2G with safety functions

### **Option 3 – Safe Speed and Positioning**

### SS1-r (Deceleration Monitored SS1)

SS1-r, when activated, monitors the controlled stop of the axis until the STO function can be activated.

### SOS (Safe Operating Stop)

Monitors the stop position reached and triggers SS1 in the event of deviations beyond the specified limits. The control functions of the drive remain active.

SOS - Safe Operating Stp

### SSR\* (Safe Speed Range)

SSR - Safe Speed Range

Monitors that the drive observes a defined speed limit. In the event of an error, STO is triggered.

## SDI\* (Safe Direction)

The SDI function ensures that the drive can only move in a defined direction. In the event of an error, SS1 is triggered.

SDI - Safe Direction

#### SLA (Safe Limited Acceleration)

This function prevents the motor from accelerating or decelerating too rapidly. If the rate of acceleration exceeds the limits, STO is triggered.

SLA - Safe Limited Accel

### SLP\* (Safe Limited Position)

Monitors the absolute position of the drive. If the limit value is reached or the brake torque is too low to keep the drive within the limit value, SS1 is triggered.

SLP - Safe Limited Pos.

### SS2\* (Safe Stop 2)

The drive is brought to a standstill by controlled braking and subsequently remains in controlled standstill. The control functions of the drive are maintained.

#### SLS\* (Safe Limited Speed)

Monitors that the drive observes a defined speed limit. In the event of an error, SS1 is triggered.

SLS - Safe Limited Speed

#### SSM (Safe Speed Monitor)

This function monitors the speed.If a selected speed range is left, a safe output signal is generated.

An additional "standstill monitor" can be replaced by the function.

### SAR (Safe Acceleration Range)

This function keeps the motor acceleration and/or deceleration within defined limits. If the acceleration limits are exceeded, STO is triggered.

SAR - Safe Accel Range

#### SLI\* (Safe Limited Increments)

Monitors the relative position of the drive with respect to the current position when activating the SLI function. SS1 is triggered when the prescribed limit value is reached.

#### SCA (Safe Cam)

This function monitors the position. If a defined position range is left, a safe output signal is generated. Used to implement safe electronic cam sequencers without requiring any hardware cams.

\*SS1, if faulted, is the default setting. Users can easily configure this or other actions in WorkBench.

# **AKD<sup>®</sup> Servo Drive**

## Our AKD series is a complete range of Ethernet-based servo drives that are fast, feature-rich, flexible and integrate quickly and easily into any application.

AKD ensures plug-and-play commissioning for instant, seamless access to everything in your machine. And, no matter what your application demands, AKD offers industry-leading servo performance, communication options, and power levels, all in a smaller footprint

This robust, technologically advanced family of drives delivers optimized performance when paired with our best-in-class components, producing higher quality results at greater speeds and more uptime. With Kollmorgen servo components, we can help you increase your machine's overall equipment effectiveness (OEE) by 50%.

## The Benefits of $\mathsf{AKD}^{\circ}$ Servo Drives

Optimized Performance in Seconds	<ul> <li>» Auto-tuning is one of the best and fastest in the industry</li> <li>» Automatically adjusts all gains, including observers</li> <li>» Immediate and adaptive response to dynamic loads</li> <li>» Precise control of all motor types</li> <li>» Compensation for stiff and compliant transmission and couplings</li> </ul>
Greater Throughput and Accuracy	<ul> <li>» Up to 27-bit-resolution feedback yields unmatched precision and excellent repeatability</li> <li>» Very fast settling times result from a powerful dual processor system that executes industry-leading and patent pending servo algorithms with high resolution</li> <li>» Advanced servo techniques such as high-order observer and bi-quad filters yield industry-leading machine performance</li> <li>» Highest bandwidth torque-and-velocity loops. Fastest digital current loop in the market</li> </ul>
Easy-to-use Graphical User Interface (GUI) for Faster Commissioning and Troubleshooting	<ul> <li>» Six-channel real-time software oscilloscope commissions and diagnoses quickly</li> <li>» Multi-function Bode Plot allows users to quickly evaluate performance</li> <li>» Auto-complete of programmable commands saves looking up parameter names</li> <li>» One-click capture and sharing of program plots and parameter settings allow you to send machine performance data instantly</li> <li>» Widest range of programming options in the industry</li> </ul>
Flexible and Scalable to Meet any Application	<ul> <li>» 3 to 48 Arms continuous current; 9 to 96 Arms peak</li> <li>» Very high power density enables an extremely small package</li> <li>» True plug-and-play with all standard Kollmorgen servo motors and actuators</li> <li>» Supports a variety of single and multi-turn feedback devices – Smart Feedback Device (SFD/SFD3), EnDat 2.2, EnDat 2.1, BiSS, analog Sine/Cos encoder, incremental encoder, HIPERFACE®, and resolver</li> <li>» Tightly integrated Ethernet motion buses without the need to add large hardware: EtherCAT®, SynqNet®, Modbus® TCP, EtherNet/IP™, PROFINET® RT, SERCOS® III, and CANopen®</li> <li>» Scalable programmability from base torque-and-velocity through multi-axis master</li> </ul>

# **AKD<sup>®</sup> Servo Drive**

The AKD servo drive delivers cutting-edge technology and performance with one of the most compact footprints in the industry. These feature-rich drives provide a solution for nearly any application, from basic torque-and-velocity applications, to indexing, to multi-axis programmable motion with embedded Kollmorgen Automation Suite<sup>™</sup>. The versatile AKD sets the standard for power density and performance.

# **AKD<sup>®</sup> Servo Drive**

### **Range of Coverage**

When you pair the AKD servo drive with any of our Kollmorgen motors or linear actuators, you'll achieve optimized performance. From 3 to 48 Arms continuous current and 9 to 96 Arms peak current, the feature-rich AKD provides a solution for nearly any application.

AKD's Kollmorgen Rotary Motor Coverage

\*\* AKM Compatible Micron Gearboxes available up to 5,000 Nm

Continuous Thrust at Speed - N [lbs]

### Feedback & I/O

AKD<sup>®</sup> servo drive is specifically designed with the versatility, communications, and power you need to expand machine performance and increase integration speeds. Motor set-up is plug-and-play and multiple Ethernet connectivity options provide both open and closed protocols. Online troubleshooting and data verification enable faster, bug-proof programming. And a broad power range in a smaller, compact design allows you to use these robust drives with a single interface while experiencing industry-leading, high-performance servo loops.

### **AKD Specifications**

	Standard Drive	With I/O expansion - AKD-T only

# **AKD® BASIC Drives**

### High Performance Capabilities in an Integrated Drive/Control Solution

## Add co-engineering to your toolbox. Save money, simplify your machine and customize performance to meet the specific needs of each customer or application – as needed, today or tomorrow.

Our Kollmorgen AKD<sup>®</sup> BASIC drives add BASIC-programmable machine and motion control to the superior performance of our AKD drive platform. So engineers can quickly customize performance at the drive level without touching the PLC. In fact, for many applications you can avoid the expense, wiring and cabinet space of a PLC altogether.

Whether you rely on your own engineering expertise or Kollmorgen's, the base and Expanded I/O versions of our AKD BASIC drive give you the unprecedented machine and motion control flexibility in a compact, fully integrated drive package. It's one more example of our co-engineering mission to help you deliver exactly what your customers want – when they want it – in solutions that are more cost-effective to build, simpler in design and faster to market.

### **AKD BASIC Language Programmable Drive**

In addition to the wide selection and key features of our proven AKD, the standard version of our AKD BASIC drive offers:

- » Programmable machine control built into the drive, so you can engineer perfect axis-level performance without touching the machine controller. In fact, AKD BASIC can eliminate the need for a PLC in single and 1.5 axis applications – reducing wiring requirements, panel space, design complexity and cost.
- » High performance motion control built into the drive, enabling increased speed for more complex moves in a simpler design with reduced wiring.
- » BASIC Language programming, providing simple program flow control in a solution that's easy to learn, quick to master and universally accepted.
- » An integrated development environment, allowing singlepoint programming, de-bugging, commissioning, tuning and management of your AKD BASIC drive from within AKD WorkBench. Our BASIC editor provides innovative features that speed development time and reduce coding errors.
- » Source code lockout with password protection, freeing you to differentiate your product with drive-level control while safeguarding your intellectual property.

I/0 Capabilities	Base Version	Expanded I/O Version
Digital Inputs	8	20
Digital Outputs	3	13
Analog Inputs	1	2
Analog Outputs	1	2

### Expanded I/O AKD BASIC Programmable Drive

Building on the features of the AKD BASIC drive, we also offer an expanded I/O version that adds:

- » A total of 20 digital inputs, 13 digital outputs, 2 analog inputs and 2 analog outputs, reducing or eliminating the need for remote I/O and its associated installation and wiring costs.
- » An SD memory card slot for loading, and restoring programs and parameters, without the need for a PC.

### Development Tools that Speed Programming and Improve Quality

Co-engineering is a powerful tool. To make it easy for you to provide better solutions for your customers, we provide an innovative BASIC programming environment within Kollmorgen WorkBench. So there's only one software package to use for all of your drive setup, configuration, tuning and management tasks in addition to motion and machine control programming.

Pre-built code templates give your application a head-start, while automatic formatting, highlighting and other ease-of-use features increase programming speed and accuracy. Complete access to all programming capabilities and drive features within a single environment helps speed your development of complete, optimally engineered solutions.

Novice users will enjoy a short ramp-up time to productive coding, while experienced users will discover well-designed tools that take their programming skills to new levels of speed and quality.

- 1 Integrated axis setup
- 2 Code snippets simplify formatting
- (3) Auto-complete helps speed coding and reduce errors
- 4 Automatic color coding makes it easy to distinguish comments, parameters, print statements and other types of code
- 5 Full debugger accelerates development
- 6 Packaged program console provides instant program status
- (7) Menu-driven navigation provides intuitive look and feel
- 8 Window pinning maximizes workspace

# **AKD<sup>®</sup> PDMM Drive-Resident Controller**

#### Build Simpler and Better with Drive-Resident Machine and Motion Control

Extend your design options. Control as many as eight axes or more without the need for a PLC or PAC. Reduce cabinet space and wiring requirements. Program perfect machine and motion control for any project using a single, fully integrated programming environment. Build a better machine at a lower cost.

Our addition to the AKD<sup>®</sup> drive family combines one servo axis, a master controller that supports multiple additional axes, and the full automation capability of Kollmorgen Automation Suite<sup>™</sup> —all in a single, compact package.

Welcome to the AKD® PDMM programmable drive, multi-axis master.

\*Where"x" = C is for the standard 800 MHz CPU and "x" = 1 is for the high performance v1.2 GHz CPU.

\*Maximum axis count depends on motion/automation complexity and performance (8 axes nominal based on medium complexity at 4 kHz network update rate)

### Features

- » Kollmorgen Automation Suite<sup>™</sup> provides fully integrated programming, testing, setup and commissioning
- » Embedded web server utility simplifies service
- » Control 32 axes or more\* while reducing machine footprint
- EtherCAT<sup>®</sup> multi-axis master motion controller integrated with a standard AKD<sup>®</sup> drive axis
- Full IEC61131-3 soft PLC for machine control, with support for all 5 programming languages
- Choice of PLCopen for motion or Pipe Network<sup>™</sup> for programming motion control
- 32 KB non-volatile memory stores machine data to eliminate scrap upon restart after power failure
- SD Card slot simplifies backup and commissioning, with no PC required
- On-board I/O includes 13 digital inputs, 4 digital outputs, 1 analog input, 1 analog output (expandable with AKT series of remote I/O)
- » Works with Kollmorgen Visualization Builder for programming AKI2G humanmachine interface panels

### A Single, Scalable Development Suite

Kollmorgen Automation Suite<sup>™</sup> simplifies and accelerates development through a unified system of software, hardware, and collaborative co-engineering. This scalable solution provides a fully integrated development environment for any application, whether you're programming a single axis of motion, a multi-axis AKD<sup>®</sup> PDMM system, or a PCMM-based system up to 64 axes or more. Kollmorgen Automation Suite has been proven to:

- » Improve product throughput by up to 25% with industry-leading motion bandwidth
- » Reduce scrap by up to 50% with world-class servo accuracy, seamless power-failure recovery and highly dynamic changeovers
- » Increase precision for better quality, reduced waste and less downtime using EtherCAT<sup>®</sup>—the field bus with motion bus performance
- » Enable more adaptable, sustainable and innovative machines that measurably improve marketability and profitability

### A Single Family of Servo Drives

Kollmorgen AKD<sup>®</sup> servo drives deliver cutting-edge performance in a compact footprint. From basic torque-and-velocity applications, to indexing, to multi-axis programmable motion, these feature-rich drives offer:

- » Plug-and-play compatibility with your servo motor
- » All the advantages of Kollmorgen's breadth of motor platforms including AKM<sup>®</sup>, CDDR<sup>®</sup>, and other direct-drive technologies
- » The fastest velocity and position loop updates
- » Full-frequency auto-tuning for perfect motion across the performance spectrum
- » Real-time feedback from a wide variety of devices

### Our Best Drive and Automation Solution in a Single Package

The AKD PDMM programmable drive, multi-axis master combines our AKD drive platform with the full feature set of Kollmorgen Automation Suite in a single package—providing complete machine and motion control for up to eight axes or more.

You need only one development suite and one drive family for all your projects. And you can rely on one source for all the motion components and co-engineering expertise you need to build a better machine.

With AKD PDMM, the best in machine engineering has never been easier, faster or more cost-effective.

# **AKD<sup>®</sup> Servo Drive Accessories**

### **Ethernet Connectivity**

- » Ethernet-based AKD servo drive provides the user with multiple bus choices
- » EtherCAT<sup>®</sup> (DSP402 protocol), Modbus<sup>®</sup> TCP, SynqNet<sup>®</sup>, EtherNet/IP<sup>™</sup>, PROFINET<sup>®</sup> RT, SERCOS III, and CANopen<sup>®</sup>
- » No option cards are required

### **Industrial Design**

- » Rugged circuit design and compact enclosure for spacesaving, modern appearance – minimizes electrical noise emission and susceptibility
- » Full fault protection
- » UL, cUL listed, CE, and EAC
- » No external line filters needed (480 Vac units) for CE & UL compliance
- » Removable screw terminal connectors for easy connections
- » DC Bus sharing

### Safe-Torque-Off (STO)

- » Switches off the power stage to ensure personnel safety and prevents an unintended restart of the drive, even in fault condition
- Allows logic and communication to remain on during power stage shut down
- » AKD-x003 AKD-x024: SIL2 / PL d
- » AKD-x048: SIL3 / PL e

### **Internal Regenerative Braking Resistor**

(all models except 120/240 Vac 3  $A_{eff}$  and 6  $A_{eff}$  , as well as 480 Vac, 48  $A_{eff})$ 

- » Simplifies system components
- » Saves overhead of managing external regeneration when internal regeneration is sufficient

### Performance Servo Tuner (PST)

- » Exclusive patent pending auto-tuner reaches optimized set-up in seconds
- » Handles inertia mismatches up to 1000:1
- » Industry leading bandwidth under compliant and stiff load conditions, no matter the mechanical bandwidth of the machine

### Plug-and-Play with Kollmorgen Motors and Actuators

- » Electronic motor nameplates allow parameters to automatically load for fast commissioning
- » Motion in seconds
- » Custom motor parameters easily entered

### I/O (Base Drive)

- » 8 digital inputs (1 dedicated to enable)
- » 2 high-speed digital inputs (maximum time delay of 1.0 μs)
- » 3 digital outputs (1 dedicated to fault relay)
- » 1 analog input 16 bit
- » 1 analog output 16 bit

### AKD 120/240 Vac Connector Layout

# Kollmorgen Workbench

Our simple Graphical User Interface (GUI), Kollmorgen WorkBench, is designed to expedite and streamline the user's experience with the AKD<sup>®</sup> family of servo drives. From easy application selection and reduced math, to a sleek sixchannel scope; the user interface is extremely easy to use. Kollmorgen WorkBench supports intuitive access to the exclusive Performance Servo Tuner (PST) available inside AKD. The patent pending PST makes auto-tuning the AKD high-performance servo drive with world-class Kollmorgen motors very simple.

### **User-Friendly Environment**

Logical flow, colorful icons and easy access simplify interactions with the AKD servo drive. The folder structure allows for instant identification and easy navigation.

# **AKD®-N Decentralized Servo Drive**

The decentralized AKD-N servo drives from Kollmorgen can be placed in the immediate vicinity of the motor thanks to its robust, compact construction and protection class IP67, plug-in connections, excellent motor compatibility and high degree of integrated functionality.

With the decentralized AKD-N servo drives, you can develop drive and automation architectures that are easily comprehensible, and integrate with the central AKD servo drives. Using EtherCAT<sup>®</sup> as a system bus, we reduce complexity further since the AKD-N can collect I/O signals on the axis and pass them on in bundled form.

## **Improved Overall Equipment Effectiveness (OEE)**

With AKD-N you increase the effectiveness beyond the entire life cycle of your machine (OEE, Overall Equipment Effectiveness). The design configuration and simple connection technology decrease the time for assembly, installation, and start-up. During the operating phase, the AKD-N plays a valuable part in energy savings due to the integrated DC connection. Further advantages in production are faster cleaning cycles, thanks to a higher protection class, as well as fewer cables in combination with a space-saving switch cabinet superstructure. Moreover, the assembly and connection technology increases the availability – and thereby productivity – because maintenance and service tasks are completed faster.

### The Advantages of Decentralized Servo Drives

Reduced costs	Reduced cabling because DC and network, power supply, I/O level as well as safety (STO) run in one cable Faster and simple assembly, even without special knowledge, through ready- made and tested cables Lack of derating enables smaller motor and servo drive combinations compared to integrated system with the same output power
Compacter machines	Smaller and therefore more easily integrated switch cabinets Servo drives in the immediate vicinity of the motor Robust construction in Protection class IP67 makes protective enclosures superfluous
Faster startup	Plug connectors in IP67 for connection without tools At only eleven millimeters, the thin hybrid cable can be laid in a space-saving manner – even in tight machine corners, thanks to a small bending radius Simple connection of I/O systems or networks directly to the drive Parameterization with the tools of the Kollmorgen WorkBench
Higher machine effectiveness (OEE)	Design supports fast and effective cleaning High operating safety through robust construction Precision through digital feedback Everything at a glance: Status display on servo drive
More flexibility in machine design	Compatible with all motors from Kollmorgen with single-cable, or dual-cable, connection Simple combination of central and decentralized controllers within the comprehensive AKD family Faster modification and upgrade options through linear topology as well as I/O and network interfaces at the axis

# AKD<sup>®</sup>-N Decentralized Servo Drive

## Next Gen Machine Design Now

Next gen design requires the perfect interplay of standardized drive and automation components. Selection of a functional, freely scalable solution ultimately ensures the highest degree of design freedom in building machines that operate efficiently without complexity.

### Kollmorgen Automation Suite™

- » Scalable automation solution for drivedominant applications
- » Graphic motion programming
- » Compatible with IEC 61131-3 and PLCopen Motion Control

### AKD-C Central Power Supply Module

- » Power supply for up to 16 AKD-N
- » Complete integration in the AKD family
- » Complete integration in the AKD family
- » EtherCAT<sup>®</sup> Network
- » 2 STO inputs SIL 2 / PLd
- » 1 each digital input and output, 1 relay output

#### AKD-N Distributed Servo Amplifier

- » Less cabling through single-cable solution
- » Fast installation, simple assembly and connection
- » IP65/IP67, UL design 4x
- » Options: local EtherCAT<sup>®</sup> interface or local STO (SIL2/PLd), connection for feedback systems

### PCMM<sup>™</sup> Stand-Alone Controller

- » Up to 128 axes of coordinated motion with a single controller
- » Up to 1.2GHz CPU for both motion and machine control
- PipeNetwork<sup>™</sup> motion engine for visual programming or PLCOpen Motion engine
- » High performance control with flexible cycle time as low as 250  $\mu s$
- » 100BaseT connection supporting MODBUS TCP/IP, EthernetIP®, Profinet®, HTTP, and UDP

### KCM Capacitor Modules

- » Reduces the energy costs and prevents downtime
- Simple implementation
  - » No harmonics in the power cables
  - » Scalable capacity

### AKM<sup>®</sup> 2G Servo Motors

- » Average continuous torque increases of 30% or greater
- » The same performance in 20% less space.

### AKM<sup>®</sup> Servo Motors

- » High torque density
- » High precision and dynamics
- » Produced in Europe, US and Asia regions

### AKMH<sup>™</sup> Stainless Steel Motors

- » For the highest hygienic requirements
- » Protection class IP69K
- » Fulfills EHEDG directive

- » Applications with regular cleaning
- » Housing coating is Ecolab®-certified

### AKM Washdown Food Servo Motors

- » For use in the food and beverage industry
- » Protection class IP67, FDA compliant

- » The highest hygienic requirements
- » High efficiency
- » Single-cable connection

### Cartridge Direct Drive Rotary® DDR

- » Direct load coupling without gears or belts
- » High precision, low noise generation

### KBM Direct Drives with No Housing

- » Low weight, exceptionally compact
- » Modular system

### DDL Ironcore ICH Motor

- » High power density
- » Large dynamics (>10g)
- » Patented anti-cogging design

### **Linear Actuators**

- » Positioning an externally guided and supported load.
- » Moving a load that pivots.

## **AKD®-N Decentralized Servo Drive**

## **Our Way of Making Machines Simpler and More Efficient**

## Why Lay 372 m. of Cable When 42 m. Will Suffice?

Imagine your machine includes eight axes each with a distance of three meters. The switch cabinet is 5 meters away and on each axis there is also a switch. With this thoroughly realistic example, that equates to a total of 372 meters of cable – with our AKD-N it would have been 42 meters. The decentralized servo technology of the AKD-N saves 330 meters here! That is cable that does not have to be purchased or laid and which does not require any space in the machine construction. We find that these are very good grounds for starting the comparison. We combine the AKD-N servo controllers and their power supply modules with pre-assembled and tested system cables – it doesn't get much simpler than this.

### Regardless of which Motor: Plug and Play

Our AKD-N decentralized servo controllers work optimally with every motor. Within our Kollmorgen system, you can also thoroughly use all advantages of the single-cable connection technology individually.

## **AKD®-N Decentralized Servo Drive**

### **Technical Data and Topology**

## **Servo Motors**

## When you need precise position control, choose from Kollmorgen's broad portfolio of servo system components.

Our unparalleled product line breadth provides great flexibility for any application. Whether it's any combination of motors and drives, cables, controller, electric cylinders or gearboxes, all components are plug-and-play for easy, seamless integration. These best-in-class servo systems can be matched with single-axis or multi-axis motion controllers for a system solution that's precise, reliable and durable.

### The Advantages of Kollmorgen Servo Motors

» Optimized AKM family and direct drive motor windings for the AKD <sup>®</sup> family of servo drives	» With the same size, the AKM offers up to 47% more power on the motor shaft
» Amplifier and motor dimensions reduced	» For a given frame size the AKM2G provides an
» Lower system costs	average continuous torque increase of 30% compared to most competitive motors of equivalent size
» Quicker start-up of all servo systems	» Start-up of amplifiers with plug-and-play detection
<ul> <li>Immediate and adaptive reaction to dynamic loads optimizes performance within seconds</li> </ul>	for AKM family and Cartridge DDR series motors
» Precise regulation of all motor types	
» Compensation for stiff and compatible gearboxes and clutches	
» More precise machines due to higher resolution and improved accuracy	» New, cost-efficient multi-turn feedback options
» With multi-turn absolute encoders: reduced cycle times and lower costs for sensors and cabling through the omission of conventional reference run methods	
» Machine design independent of motor size	» Motors with the highest power densities in the whole
» Installation of motors in the tightest space	industry
<ul> <li>Millions of standard motor versions available in various mounting, connection, and feedback variants, as well as further options</li> </ul>	<ul> <li>AKM offers 28 housing and design length combinations, as well as 120 different standard windings for a single motor series</li> </ul>
<ul> <li>Available with single cable technology with digital feedback (Kollmorgen exclusive SFD3,</li> </ul>	<ul> <li>» AKM2G is available in 6 frame sizes, 23 frame-stack length combinations, and 70 standard windings</li> </ul>
HIPERFACE® DSL or EnDat 2.2)	» The AKM2G design has the potential for greater
<ul> <li>Our flexible products deliver a perfectly suited solution to your application</li> </ul>	Co-Engineering (modification) thanks to the new housing design. With a more flexible design for Co-
<ul> <li>Simplifies mechanical modifications and design adjustments or renders them totally superfluous</li> </ul>	Engineering addressing applications not covered by catalog standards is increased
» AKM Washdown and AKM Washdown Food offer	» AKM and AKM2G are available in standard IP54 rating (AKM1 standard IP40 ) or optional IP65 with
maximum reliability and a long service life for the most demanding industrial applications	shaft seal. AKM is also available with IP67 rating

## Kollmorgen Servo Motor Overview

Kollmorgen offers a comprehensive range of servo motors including electric cylinders, rodless actuators, and precision tables to meet a wide range of application requirements. For actuator products not included in this catalog go to www.kollmorgen.com for information about other Kollmorgen linear positioning products.

	Model	Product Family	Applications
	AKM <sup>®</sup> 2G and AKM <sup>®</sup> Servo Motors	AKM	Designed with industry leading torque density and configurability. The medium-inertia AKM line includes over 4.8 million standard options to fit applications from general automation to applications that require IP67 sealing. The low-inertia AKM2G expands the AKM family to offer smaller footprint, higher torque versions for applications requiring the maximum torque density and the highest dynamic performance.
	AKMH IP69K Hygienic Motors	АКМН	The AKMH meets the food industry's strictest hygienic design criteria while being rugged enough to withstand the toughest of daily washdown regimens. Perfect for Food Processing, Primary Food Packaging, Pharmaceutical and Medical applications.
O	Cartridge Direct Drive Servo Motors	CDDR	The CDDR is designed to provide the benefit of embedded frameless motor technology in an easy-to-integrate package. Perfect for applications in Printing, Packaging and Converting.
	Housed Direct Drive Servo Motors	HDDR	Housed DDR motors are designed for precise positioning of larger loads without the use of a mechanical transmission. Increasing OEE through the removal of belts and gearboxes that fail unexpectedly or require frequent maintenance.
	KBM Frameless Direct Drive Motors	KBM	With a wide variety of sizes and an extensive range of torque and speed options the KBM frameless direct drive motors are engineered to provide the high-performance, long life and simple installation that today's design engineers demand.
	TBM Frameless Direct Drive Motors	TBM	The Kollmorgen TBM frameless direct direct drive motors are designed for applications that require high power in a small, compact form factor with minimized weight and inertia. These motors provide the highest performance in applications such as robotic joints, medical robotics, sensor gimbals, guidance systems and other motion-critical applications.
	Direct Drive Linear Servo Motors	IC IL	Ideal for applications requiring very low bearing friction, high acceleration of lighter loads, and for maximizing constant velocity, even at ultra low speeds.

Model	Product Family	Features
AKM <sup>®</sup> 2G and AKM <sup>®</sup> Servo Motors	AKM	Designed to deliver precise motion and more power for your money. More than 500,000 standard configurations that include various feedback, connector, paint and sealing options.
AKMH IP69K Hygienic Motor	АКМН	The AKMH is designed to withstand the toughest of daily washdown regimens without the need for covers. The AKMH's hygienic design makes it easy to clean, keeping your machine running and protecting your brand. Designed with a single cable that combines power, feedback and an innovative venting feature that extends the life of the motor.
Cartridge Direct Drive Servo Motors	CDDR	The CDDR is a patented design that allows for this torque dense frameless motor to be installed on your machine in 5 minutes. The CDDR lowers your machines maintenance, increases your machines uptime and increase your machines peformance.
Housed Direct Drive Servo Motors	HDDR	Housed DDR motors are maintenance free and run more quietly and with better dynamics than systems that use gears, belts, cams or other mechanical transmission components.
KBM Frameless Direct Drive Motors	KBM	KBM motors cover a range of frameless motor solutions across a variety of applications. KBM is engineered to provide the high-performance, long life and simple installation that today's design engineers demand.
TBM Frameless Direct Drive Motors	TBM	Typical applications include robotic joints, weapon stations, sensor gimbals, sight systems, UAV propulsion and guidance, as well as many others.
Direct Drive Linear Servo Motors	IC IL	Kollmorgen linear motors provide precise placement of product by directly coupling to your load and eliminating the backlash associated with high maintenance linear transmission components.

## AKM<sup>®</sup> Servo Motor Family

Kollmorgen's AKM family of servo motors gives you unprecedented choice and flexibility from a wide range of standard products so you can select the best servo motor for your application.

With the broad range of AKM and AKM2G motors that support voltages up to 480 Vac, washdown, food grade, and the AKMH stainless steel hygienic motor for the toughest environments- Kollmorgen has a standard motor solution that can meet your needs right from the catalog.

Still need more? For your truly unique motion control applications, work with our engineering team to customize a solution for your machine design. Either way, standard product or customized, we can help you choose the motion control solution that meets your exact requirements.

### The Benefits of AKM<sup>®</sup> Servo Motors

Best-in-Class Performance	<ul> <li>Industry-leading motor power density</li> <li>Same size AKM/AKD system delivers up to 47% more shaft power</li> <li>Compensation for stiff and compliant transmissions and couplings</li> <li>Exceptionally low cogging</li> </ul>
Flexibility to Find an Exact-fit Solution in a Standard Product	<ul> <li>» AKM offers 28 frame-stack combinations and 120 standard windings in a single motor line</li> <li>» 4.8 million possible AKM part number combinations and growing</li> <li>» Simplifies or eliminates mechanical modifications and engineering adaptation</li> <li>» Available with single cable technology with digital feedback (Digital Resolver SFD3 or HIPERFACE® DSL)</li> <li>» Washdown and Food Grade options for AKM</li> <li>» Higher torque models up to 180 Nm of continuous torque</li> </ul>
Ease-of-Use and Faster Commissioning	<ul> <li>» Plug-and-play motor recognition drive commissioning</li> <li>» Reduce cycle time and sensor-and-wiring costs by eliminating traditional homing methods</li> <li>» Reduction in set-up time for each servo system</li> </ul>

# AKM<sup>®</sup>2G Brushless Servo Motor

### AKM°2G represents the latest evolution of the industry leading AKM motor product family.

With average continuous torque increases of 30%, OEMs and users can achieve substantial machine performance increases without increasing the size of the motor.

The improved torque density allows a smaller motor to be used which reduces the machine footprint without sacrificing performance.

- » Extensive Selection of Feedback options to match application and performance requirements
- » Shaft, mounting and connector options for optimal flexibility
- » Holding Brake option

### Get the same performance in 20% less space.

For new machine designs, the AKM2G allows customers to decrease the size, footprint, and complexity of the machine, while still getting the power and performance they need.

The AKM2G drops right into existing machine designs to increase performance, when compared to competing motors, without increasing the size of the motor.

The AKM2G features six sizes with performance levels between 0.3 and 10kW. It offers selectable options such as feedbacks, mounting configurations, and performance capabilities. Due to the modular structure of the motor, Kollmorgen is better equipped than competitors to adapt motors to the requirements of a specific application in parallel with standard production needs. Machine builders are then able to choose from a wider range of standard models that leverage Kollmorgen's extensive product and application knowledge.

### The Benefits of AKM2G Servo Motor

Smaller Footprint	<ul> <li>Reduce machine space</li> <li>For equivalent torque it is possible to use a smaller size motor than most competitive motors.</li> <li>The range of AKM2G sizes provides for optimizing for length or flange square depending on which dimension is most critical.</li> <li>Use of the smaller motor saves space achieving equivalent performance in a smaller footprint machine or saving space for other machine elements.</li> </ul>
Increased Torque	<ul> <li>Higher performance</li> <li>» For a given frame size the AKM2G provides an average continuous torque increase of 30% compared to most competitive motors of equivalent size.</li> <li>» Higher torque in the same package size increases machine performance (greater throughput, move heavier loads, etc.).</li> </ul>
Wider Speed Range	<ul> <li>Faster operation</li> <li>» For many AKM2G sizes the maximum speeds are higher than competitive motors.</li> <li>» Higher speeds ⇒ operate machines faster ⇒ greater throughput.</li> </ul>
Greater Flexibility	<ul> <li>More options to match needs</li> <li>AKM2G is designed to support a wider array of feedback, brake, thermal sensor and shaft seal options <ul> <li>this greater flexibility means a higher probability of meeting application requirements with a standard product.</li> </ul> </li> <li>The AKM2G design has the potential for greater Co-Engineering (modification) thanks to the new three-piece housing. With a more flexible design for Co-Engineering, addressing applications not covered by catalog standards is increased.</li> <li>Standard voltage selections of 24, 36, 48, 72, 96 and 108 Vdc meet most available power sources for low voltage motors. 120, 240, 400 and 480 Vac for higher voltage systems.</li> <li>Kollmorgen can work with you to meet your specific requirements for the exact solution you need.</li> </ul>
Higher Efficiency	<ul> <li>Reduce energy consumption</li> <li>AKM2G has lower equivalent resistance than many competitive solutions. For equivalent motor frame sizes AKM2G will typically be more energy efficient (2-5%).</li> <li>Energy consumption is reduced with AKM2G compared to many competitors.</li> <li>When weight and space are critical such as on portable, mobile or battery power applications higher efficiency translates to a smaller motor with lower energy demand.</li> </ul>

AKM2G Series Servo Motor Family

# **AKM<sup>®</sup> Brushless Servo Motor**

### AKM Motors Offer Extremely High Torque Density and High Acceleration

The AKM high-performance motor series offers a wide range of mounting, connectivity, feedback and other options. These motors offer superb flexibility to meet application needs with:

- 8 frame sizes (40 to 260 mm)
- 28 frame-stack length combinations
- More than 120 standard windings

### Features

### Torque

0.16 to 180 Nm continuous stall torque (1.4 to 1590 lb-in) in 28 frame/stack combinations. Specific torques are often available from multiple frame sizes to optimize mounting and inertia matching capabilities.

### Speed

Speeds up to 8000 rpm meet high speed application requirements. Windings tailored to lower speeds are also available.

### Voltage

AKM motors can be applied to all standard global voltages. Windings are specifically tailored to work with drives powered by 75 Vdc, 120, 240, 400 or 480 Vac.

#### Mounting

Multiple mounting standards are available to meet common European, North American, and Japanese standards.

#### Feedback

AKM motors include resolver, encoder (commutating), Sine-Absolute encoder or SFD (Smart Feedback Device) feedback options to meet specific application requirements.

### Smoothness

Smooth performance results from low-cog, low-harmonic distortion magnetic designs.

### Connectivity

Rotatable IP65 connectors, straight IP67 connectors or low cost IP20 Molex plugs are both available to provide flexibility. Single connectors/plugs (combined power and feedback) are also available to minimize motor and cable cost (SFD and DSL only).

#### Thermal

Windings are rated conservatively at 100°C rise over a 40°C ambient while using 155°C (class F) insulation materials. Motors meet applicable UL, CSA, and CE requirements and include thermistors.

### **Additional Options:**

- » Holding Brakes
- » Shaft sealing options available
- » Feedback devices
- » Shaft and mounting variations
- » Custom windings
- » Connectivity

### Kollmorgen AKM Configurable Servo Motor Features

# **AKM<sup>®</sup> Washdown and Food Grade**

### AKM<sup>®</sup> Washdown and Food Grade

These motor variants are used in applications that are subject to strict hygiene regulations in which it is essential that the formation of nuclei and corrosion are avoided and in which machines must be cleaned cyclically. These motors are based on the standard types AKM2 – AKM6 with special modifications for use in the food-processing industry, in the packaging industry, or even outdoors. An option for AKM Washdown and Food Grade motors is to coat the flange.

#### Performance Data AKM<sup>®</sup> Washdown

#### Part Numbers:

AKMxxx-xxxx-0W: Washdown with unpainted flange AKMxxx-Wxxxx-0W: Washdown with painted flange

Harsh Environments, Outdoors

Note: The AKM Washdown motors must not come into contact with any unpacked food.

Application Area: Application Exampl

Application Examples:	Transport in the food and packaging area without contact with food, radar stations, and wind turbines
Standards:	UL, CE, RoHS
Surface:	Gray 2K paint
Immunity:	Against tested industrial cleaning agents*, corrosion-resistan
Degree of Protection:	IP67
Shaft:	303 Stainless steel (CSN417029)
Rotary Shaft Seal:	PTFE
Lubricant:	Industrial bearing grease, non-food-grade
Connector:	Stainless steel, smooth surface
Screws:	Stainless steel
Name Plate:	Engraved, additional name plate in the package

### AKM<sup>®</sup> Food Grade

Part Numbers: AKMxxx-xxxxx-0F: Food Grade with unpainted flange AKMxxx-Wxxxx-0F: Food Grade with painted flange

Note: The surface of the AKM Food Grade food motor has passed all tests as per FDA Global Migration for indirect contact with food. Any direct contact with unpacked food is not permitted.

Application Examples:	Food and beverages industries; cutting, packing, and filling without direct contact with food; motor positioned laterally or below the food.
Standards:	UL, CE, RoHS, FDA
Surface:	White 2K FDA compliant paint**
Immunity:	Against tested industrial cleaning agents*, corrosion-resistant
Degree of Protection:	IP67
Shaft:	303 Stainless steel (CSN417029)
Rotary Shaft Seal:	PTFE as per FDA
Lubricant:	Food grade as per FDA
Connector:	Stainless steel, smooth surface
Screws:	Stainless steel
Name Plate:	Engraved, additional name plate in the package

\* Resistance of the AKM Washdown and AKM Food Grade surfaces to the following industrial cleaning agents has been tested: P3-topactive DES, P3-topactive LA, P3-topax 56, P3-topax 66, P3-topax 91

\*\*Meets FDA global migration standards

## **AKMH<sup>™</sup> Stainless Steel Washdown Motors**

**Designed for Fast Cleaning and Increased Uptime.** The AKMH stainless steel motor is designed to meet the standards for IP69K and EHEDG and is built with FDA approved, food-grade materials. The careful elimination of flat surfaces, cracks, and crevices prevents the build-up of foreign material and bacteria. The AKMH housing and cable can endure daily wash-downs with high pressure, high temperature, and caustic chemicals. The robust design means that guards and covers are not required to protect the motor from harsh cleaning regimens. These AKMH features constitute quicker cleaning, more reliable machine performance and the increase of OEE for the entire manufacturing line.

**Reduced Recall Risk.** The Food Modernization Safety Act (FMSA) gives the US federal government the ability to shut down facilities, recall food products, and levy stiff fines to ensure public safety in regards to food manufacturing. The AKMH is designed to meet the toughest hygienic requirements in the industry in order to reduce the possibility of food borne illnesses and costly recalls.

**Bottom Line.** With 19 standard motor sizes, multiple standard windings, feedback options and vast Co-Engineering possibilities, the AKMH motor can be a great fit for diverse applications in industries such as food & beverage and pharmaceutical. Kollmorgen's AKMH environmental solutions help maintain the highest standard of machine cleanliness and increase OEE by reducing the risk of potentially devastating supplier/government recalls.

### The Benefits of AKMH<sup>™</sup> Motors

- Increase your machine's Overall Equipment Effectiveness (OEE) with water and chemical resistant designs that maximize motor reliability
- Reduce your machine's total cost of ownership with shortened cleaning times and improved durability
- » Enhance the value of your machine by lowering your customer's risk of recall through the superior hygienic design of AKMH

- » IP69K certification of motor and cable inside the washdown environment
- » Unique design technique to eliminate condensation
- » FDA Approved, food-grade O-ring seals
- » All exposed surfaces are 316L or DIN 1.4404 Stainless Steel; superior to 303/304 for corrosion resistance
- » Round design with no nooks or crannies
- » Sloped rear cover and connector mounting surface to eliminate puddling, even in vertical mounting
- » No external hardware (no bolts, washers, or screws) to trap soil or pathogens or fall into food
- » Smooth surface meeting EHEDG criteria, promotes rapid cleaning and no harboring of pathogens
- » FDA Approved, food-grade bearing lube
- » FDA Approved, food-grade shaft seal
- » Cable designed to eliminate the need for conduit
- » Hygienic, IP69K shaft seal includes special shaft treatment for long life
- » No protective covers needed for washdown; no secondary cleaning disassembly required
- **»** FDA approved, food-grade tubing option for applications where the cable is in a food zone
- » Washdown cable(s) for increased reliability, faster cleaning, and fewer places to harbor pathogens
- » Hygienic marking method eliminates harboring of pathogens
- » Unique vented tube or connector design that equalizes pressure when temperature drops; e.g., during wash-down
- » Highly configurable motor selection means an optimal fit for your machine and less time needed to find the right mechanical components
- » Innovative design features reduce associated cost and time of installation.
- » Industry leading configurability for optimized performance

- » 19 frame/stack length options
- » Windings designed for optimized machine performance
- Cables designed for direct connection to AKD2G and AKD servo drives (plug & play)
- » Cables designed to meet NFPA 79 without the need for additional thermal overload protection
- » Standard configurable cable lengths to 15 meters; no intermediate junction boxes needed
- » Face and flange mounts available in both IEC and NEMA standards
- » Brake option
- » Multi-turn absolute feedback option; single-turn absolute feedback standard
- » Additional feedback options available for retrofitting fielded motors with non-Kollmorgen drives
- » Single and dual cable options for use with non-Kollmorgen drives
- » UL/CE/RoHS/IP69K/BISSC/NSF/USDA/EAC certifications
- » Designed to EHEDG guidelines

#### Specify only Kollmorgen AKMH systems to ensure:

- » Reduced risk of food recall
- » Reduced cleaning time, higher OEE
- » Highest reliability and durability

## **AKMH<sup>™</sup> Design Features**

### The key benefits of AKMH hygienic design features:

- Reduces risk of food recall
- Increases reliability in wash-down applications
- Reduces cleaning time: higher OEE

## **Direct Drive Motor Overview**

Conventional servo systems commonly have a mechanical transmission which can consist of gears, gearboxes, belts/pulleys or cams connected between the motor and the load. With Direct Drive Motors, the mechanical transmission is eliminated and the motor is coupled directly to the load.

#### Why Use Direct Drive Motors?

#### **Increased Accuracy and Repeatability**

A "precision" planetary gearbox could have a backlash of 1 arc-minute. This can result in the load moving by 1 arc-minute with an absolutely stationary drive motor. Kollmorgen's standard direct drive rotary (DDR) and direct drive linear (DDL) servo motors have repeatability better than 1 arc-second. Therefore, a direct drive motor can hold a position 60 times better than a conventional motor/gearbox.

The increased accuracy of direct drive rotary motors results in a higher quality product out of the machine:

- Print registration is more accurate
- · Cut or feed lengths can be held more precisely
- Coordination with other machine axes is more accurate
- · Indexing location is more exact
- Tuning issues due to backlash are eliminated

#### **Higher Bandwidth**

Mechanical transmission components impose a limit on how fast a machine can start and stop and also extend the required settling time. These factors limit the possible throughput of a machine.

Direct drive rotary motors remove these limitations and allows for much faster start/stop cycles and also provide greatly reduced settling time. Users of direct drive systems have reported up to a 2X increase in throughput.

#### **Improved Reliability and Zero Maintenance**

Gears, belts, and other mechanical transmission parts break. By eliminating these parts and using DDR and DDL motors, the reliability of the machine is improved. Gearboxes require periodic lubrication and/or replacement in aggressive start/stop applications. Belts require periodic tightening. There are no time-wear components in a direct drive motor and consequently they require zero maintenance.

#### **Fewer Parts**

With direct drive motors, all you need is the motor and the mounting bolts. This often replaces many parts including brackets, guards, belts, pulleys, tensioners, couplings, and bolts, resulting in:

- · Fewer parts on the BOM. Less parts to purchase, schedule, inventory and control, and less parts to assemble.
- Assembly time of the servo drops from several hours with the mechanical transmission to several minutes with the DDR.
- Reduced cost. Although a direct drive motor may carry a small price-premium compared to a motor/gearbox with the same torque, consider that there is an overall cost reduction when eliminating the parts and labor of all the extra components required in a servo system with mechanical transmission.

#### No Inertia Matching

Servo systems with mechanical transmissions require inertia matching that limits the reflected load inertia at 5 to 10 times the motor inertia. If this limitation is not met, the system becomes difficult to control due to instability issues. Inertia matching limitations of mechanical transmission systems often force machine designers to use a larger motor than would otherwise be required just to satisfy the inertia matching requirement.

Such sizing conventions are not required with direct drive rotary motors. Since the motor is directly connected to the load, the inertia of the motor and the load become a common inertia. Therefore, no inertia matching is required when using DDR and DDL. DDR and DDL applications have run with inertia ratios greater than 1,000:1.

#### **Reduced Audible Noise**

Machines with DDR motors have audible noise levels as low as 20 dB less than the same machine with a mechanical transmission.

### Which Direct Drive Motor is Right for Your Application?

Kollmorgen's 70 years of electromagnetic and electromechanical design experience combined with our quality and service, allowed us to refine and expand DDR motors into three product categories for easy installation, use, and short lead times: Frameless DDR, Housed DDR, and the Cartridge DDR<sup>®</sup>. This allows you to select the right DDR solution for your application.

#### Applications where the load rides on the motor's bearings such as indexing or rate tables

#### **Cartridge DDR Motor**

This motor is the first in the industry to combine the space-saving and performance advantages of Frameless DDR motors with the ease of installation of a full-frame motor. Consisting of a rotor, stator, and factory-aligned high-resolution feedback device, the motor uses the machine's bearings to support the rotor. An innovative compression coupling engages the rotor to the load and the frame of the motor mounts to the machine with a bolt circle and pilot diameter just like a conventional servo motor, saving space and design time and simplifying the overall system.

#### Any application with existing bearings

#### **Housed DDR Motor**

The Housed DDR is a housed motor assembly featuring a factory aligned high-resolution feedback device and precision bearings, allowing it to function as the core of rotary indexing and rate table applications. The system can also be used as a flexible indexer, providing programmable, rapid indexing far exceeding the throughput and accuracy of conventional mechanical or variable reluctance indexers.

#### Applications where size and weight must be absolutely minimized

#### **Frameless DDR Motors**

Frameless motors include a rotor and stator as separate components which are integrated into, ride on the bearings of, and become a part of the driven load. Frameless motors offer the most compact and lightweight DDR solution available. The KBM<sup>™</sup> and TBM series are Kollmorgen's Frameless DDR products. The KBM provides excellent torque/volume with the use of a proprietary neodymium-iron magnet rotor structure and skewed armature assembly. The KBM series is the first UL recognized parts set available on the market. This provides OEMs with the benefits of UL component ratings for easier agency approval on their machines. The TBM frameless motor is a series of direct drive torque motors designed for applications that require high power in a small, compact form factor with minimized weight and inertia.

#### Applications where linear motion is required

#### **Direct Drive Linear (DDL) Motor**

Directly coupling a linear motor to the driven load offers many advantages, including eliminating all mechanical transmissions, such as ball/lead screws, rack & pinions, belts/pulleys, and eliminating gearboxes. This in turn also eliminates backlash and compliance, and other problems associated with these mechanical transmissions.

# **Direct Drive Linear (DDL) Motor**

Our direct drive linear motor series provide new dimension in performance with high throughput, accuracy, and zero maintenance.

The product line are frameless, permanent magnet, three phase, brushless servo motors. The DDL product line consists of two fundamental constructions, Ironless (slotless) and Ironcore. Ironless motors have no attractive force between the framless components and zero cogging for the ultra smooth motion. Ironcore motors provide the highest force per frame size. They feature a patented anti-cogging design which yields extremely smooth operation.

### The Benefits of Direct Drive Linear Motor

» Zero Maintenance with Greater Accuracy and Higher Bandwidth	<ul> <li>» Smoother velocity and reduced audible noise</li> <li>» Power transmission without backlash</li> <li>» Transmission elements such as couplings, toothed belts, ball/lead screws, rack &amp; pinions, and other fitted components can be eliminated</li> <li>» No gears or screws, no lubrication required</li> <li>» Improved machine reliability</li> </ul>
» Wide Range of Sizes and Force to Cover any Linear Application	<ul> <li>» Increased performance for the entire system</li> <li>» Flat, compact drive solution</li> <li>» Easily mix / match motors and drives</li> <li>» Real-life acceleration up to 10 G</li> </ul>
» Simplified, High Force Permanent Magnet Design	<ul> <li>» Higher bandwidth and faster response than ball/lead screws or rack &amp; pinion solutions</li> <li>» Rapid indexing of heavy loads with peak force up to 12,500 N (2,800 lb)</li> <li>» Reduced audible noise, fewer parts and lower cost of ownership</li> <li>» More compact machine design</li> </ul>

# Direct Drive Linear (DDL) Motor

### **Direct Drive Linear Motor Options**

Two types of linear motors are available, **Ironcore** and **Ironless**. Each one provides characteristics and features that are optimal depending upon the application. Ironcore motors have coils wound on silicon steel laminations, to maximize the generated force, with a single sided magnet way.

Using a patented electromagnetic design, DDL linear motors have the highest rated force per size, a high Km motor constant (equals low thermal losses), and low cogging forces without the need for skewing of the magnets. The high thrust forces possible with these motors make them ideal for accelerating and moving high masses, and maintaining stiffness during machining or process forces. Ironless motors have no iron, or slots for the coils to be wound on.

Therefore, these motors have zero cogging, a very light mass, and absolutely no attractive forces between the coil assembly and the magnet way. These characteristics are ideal for applications requiring very low bearing friction, high acceleration of lighter loads, and for maximizing constant velocity, even at ultra low speeds. The modular magnet ways consists of a double row of magnets to maximize the generated thrust force and to provide a flux return path for the magnetic circuit.

### **Feedback Types**

All brushless motors require feedback for commutation. The conventional rotary motor typically utilizes a resolver mounted on the rear of the motor or Hall effect devices mounted integrally in the coil windings. For a linear motor, commutation feedback can also be accomplished with a variety of methods. Digital or linear Hall effect devices are available from Kollmorgen for the DDL motor series which allow the drive electronics to commutate the linear motors in a manner identical to rotary motors.

For exceptionally smooth motion requirements, sinusoidal drive electronics such as the Kollmorgen's AKD<sup>®</sup> series, using digital Hall effects, provide sinusoidal drive currents to the motor for the best constant force and velocity performance. As an alternative, it is typical for linear motor applications to have a linear encoder present in the system for position feedback. It is increasingly common today for drive amplifiers, such as the AKD digital amplifier, to derive the necessary commutation information directly from this linear encoder, either with or without supplemental digital Hall effect devices on startup. Other types of feedback used on linear motor applications include linear Inductosyns, laser interferometers, and LVDT.

### **Advantages**

#### Wide Speed Range

Since the frameless parts of the linear motor are noncontact, and no limitations of a mechanical transmission are present, both very high speeds and very low speeds are easily obtainable. Speeds are truly not limited by the motor. Instead, by eliminating the mechanical transmission, speed becomes limited by other elements in the system such as the linear bearings, and the achievable bandwidth from any feedback devices. Application speeds of greater than 5 meters per second (200 in./sec.) or less than 1 micron per second (.00004 in./sec.) are typically achievable. In comparison, mechanical transmissions such as ball screws are commonly limited to linear speeds of 0.5 to 0.7 meters per second (20-30 in./sec.) because of resonances and wear. In addition to a wide speed range, linear motors, both ironcore and ironless, have excellent constant velocity characteristics, typically better than  $\pm$  0.01% speed variation.

#### **High System Dynamics**

In addition to high speed capability, direct drive linear motors are capable of very high accelerations. Limited only by the system bearings, accelerations of 3 to 5 G are quite typical for the larger motors and accelerations exceeding 10 G are easily achievable for smaller motors.

#### Easy Selection Process:

- 1. Determine peak and continuous force required for your applications by using the Application Sizing worksheets in the DDL Motor Selection Guide or the Motioneering tool
- 2. Refer to the DDL Motor Summary section of the DDL Motor Selection Guide to choose your motor
- 3. Build model number for ordering by referring to the Model Nomenclature section of the DDL Motor Selection Guide\*

#### **Smooth Operation and Positional Accuracy**

Both ironless and ironcore motors exhibit very smooth motion profiles due to the inherent motor design of Kollmorgen's DDL series. Cogging, which is a component of force, is greatly reduced in the ironcore designs and is zero in the ironless designs. As a result, these direct drive linear motors provide very low force and velocity ripple for ultra smooth motion. Positioning accuracies are limited only by the feedback resolution, and sub-micron resolutions are commonly achievable.

#### **Unlimited Travel**

With the DDL motor series, magnet ways are made in 5 modular sections: 64 mm, 128 mm, 256 mm, 512 mm and 1024 mm long. Each module can be added in unlimited numbers to any other module to allow for unlimited travel. Whether the travel required is 1mm (0.04 inches) or 100 meters (330 feet), the DDL series can accommodate the need.

#### No Wear or Maintenance

Linear motors have few components, therefore the need for ball screw components such as nuts, bearing blocks, couplings, motor mounts and the need to maintain these components have been eliminated. Very long life and clean operation, with no lubrication or maintenance of these parts are the result.

#### **Integration of Components is Much Simpler**

Frameless linear motors require much fewer components than rotary motors with mechanical transmissions. A 0.8 mm airgap (0.031 inches) for the ironcore design and 0.5 mm airgap (0.020 inches) for the ironless design is the only alignment of the frameless linear motor components that is necessary. No critical alignments are required as with ball screws. Straightness of travel as provided by the system linear bearings is more than sufficient for the Kollmorgen linear motors.

#### Typical Applications for Linear Motors Include:

Machine Tool Drilling Milling Grinding Laser cutting Cam grinding Semiconductor Wafer handling process Wafer-inspection Wafer slicing Tab bonding Wire bonding Ion implantation Lithography Textile Carpet tufting

Measurement/inspection Coordinate measurement machines Electronic assembly Pick-and-place machines Component insertion Screen printers Adhesive dispensers PC board inspection, drilling

#### Other applications include:

Flight simulators Acceleration sleds Catapult G-Force measurement

\* The DDL model nomenclature can also be found on pages 184 to 185.

## Direct Drive Rotary (DDR™) Motor

Kollmorgen offers a comprehensive selection of direct drive motors in different sizes and performance ranges. Direct drive motors are characterized by their high precision, reliability, and above all being maintenance-free. Mechanical components for power transmission such as belts or gearheads are not necessary – you just need the motor and bolts for mounting.

The Cartridge and Housed DDR motors combine the performance advantages of direct drives with the simple installation and the handling advantages of conventionally housed motors. By contrast the KBM<sup>™</sup> and TBM series direct drive motors, with no housing, can be perfectly tailored to the application thanks to a unique construction kit principle.

All drives can be combined with AKD<sup>®</sup> or AKD<sup>®</sup> PDMM series servo drives, and the powerful Kollmorgen Automation Suite<sup>™</sup> development environment is available for application programming.

Regardless which drive technology you decide on, Kollmorgen provides right solution and optimum support during the development phase.

### The Advantages of Rotary Direct Drives

## Cartridge Direct Drive Rotary (DDR®) Motor

The Cartridge DDR<sup>®</sup> Motor is the first in the industry to combine the space-saving and performance advantages of frameless DDR technology with the ease of installation of a full-frame motor. Cartridge DDR motors also feature an advanced electromagnetic design that provides up to 50% more torque density than comparably sized conventional servo motors.

Consisting of a rotor, stator, factory-aligned high-resolution feedback device, the Cartridge DDR motor uses the machine's bearings to support the rotor. An innovative compression coupling secures the Cartridge DDR's rotor to the machine shaft, and the Cartridge DDR's housing is bolted to the machine frame with a bolt circle and pilot – just like a conventional servo motor. Also, mechnical transmission components are eliminated, saving space and design time while simplifying the overall system.

- » Quick assembly within 5 minutes
- » Direct power transmission without mechanical components reduces operating and maintenance costs
- » Low cogging and thus smooth running at low speeds
- » The backlash-free design improves the system's response characteristics
- » 5 frame sizes from 108 to 350 mm
- » 17 different lengths and 52 standard windings
- » Continuous torques of 4.57 Nm to 510 Nm
- » Speeds up to 2500 rpm
- » Integrated, high-resolution sinus encoder (optional)

#### The Cartridge DDR® Advantage – Press Feed Machine

Consider how Cartridge DDR technology improves a Press Feed machine:

#### **Reduced Assembly Time**

The assembly time for the original mechanical transmission system was 4 hours. In contrast, the Cartridge DDR motor is installed in less than 5 minutes, resulting in a significant cost savings in labor.

#### **Reduced Parts Count**

The original mechanical transmission system comprises 2 bracket pieces, 12 bolts, 2 pulleys, 2 set screws, 2 keys, a timing belt, a housing to protect operators from the timing belt, a tension system for the timing belt, and motor/gearbox. With the Cartridge DDR system, this is all replaced by the motor and 4 mounting bolts, resulting in fewer parts to maintain and cost savings.

#### **Improved Accuracy**

The best planetary gearboxes have a backlash between 1 and 2 arc-minutes. Over the life of the gearbox, the backlash will increase. The Cartridge DDR system has an absolute accuracy of 26 arc-seconds and a repeatability of 0.7 arc-seconds. The Press Feed machine with the Cartridge DDR has a feed accuracy of +/- 0.0005 inch where the Press Feed machine with the mechanical transmission has a feed accuracy of 0.002 inch. Therefore, there was an overall four times improvement in machine accuracy with the Cartridge DDR system.

#### **Increased Throughput**

The cycle rate of the Cartridge DDR system is two times better than the mechanical transmission. This results in an increase in throughput of 100 percent.

#### Improved Reliability and Simplified Maintenance

The Cartridge DDR system eliminates parts that wear, change over time, or fail. Gearboxes are prone to wear, and backlash increases over time. Belts and pulleys stretch and require maintenance to maintain proper belt tension. By eliminating these components, the Cartridge DDR system delivers greater system reliability.

#### **Press Feed Example**

Gearboxes have a finite life span, especially in a demanding cyclic application such as a Press Feed. On this machine, the gearbox must be replaced every 10,000 hours and the belt must be tensioned every 2,000 hours. By contrast, the Cartridge DDR motor has no wear components and requires no maintenance thus simplifying the maintenance schedule for the machine and reducing operating costs.

#### **Reduced Audible Noise**

The Cartridge DDR system has as much as a 20 dB reduction in noise compared to a mechanical transmission servo system. This can dramatically reduce the overall noise level of the machine. A quieter machine gives the perception of quality. This is rightfully so as the noise emitted by gears and belts is caused by the wearing of the parts.

#### **Total Reduced Cost**

A Cartridge DDR motor typically costs 20 percent more than a comparable motor/gearbox combination. However, the elimination of parts and assembly time typically results in a lower total cost for the Cartridge DDR solution.v

Press feed machine built with a conventional servo motor, gearbox, belt and pulleys.

Same machine with a Cartridge DDR motor installed. Here, the shaft of the driven roll is extended into the Cartridge DDR motor and the motor applies torque directly to the driven roll.

## Housed Direct Drive Rotary (DDR) Motor

Housed DDR motors are multi-pole (16 to 32) hollow shaft motors with their own bearings and highresolution encoder system. They are coupled directly to the load and enable very precise and repeatable systems. Housed DDR motors are maintenance free and run more quietly and with better dynamics than systems that use gears, belts, cams or other mechanical transmission components.

#### **Realized Housed DDR Motor Benefits**

#### The Direct Drive Advantage

The following improvements were observed compared to the previous design that used a mechanical indexer:

#### **Improved Repeatability**

The Housed DDR motor demonstrated a repeatability better than 1 arc-second which was substantially better than the mechanical indexer.

#### **No Degradation**

Direct drive system performance, accuracy and repeatability do not degrade over time as they do with a mechanical indexer. With a mechanical indexer, as parts wear over time, the accuracy and repeatability degrade.

#### **Immediate Stop**

The direct drive system can immediately stop if there is a process error. The mechanical indexer required several cycles to stop which could cause tooling and machine damage.

#### **Greatly Reduced Audible Noise**

With the mechanical indexer, the noise was at a level such that two people would have to yell to hear each other. By contrast, if you turned your back to the Housed DDR motor, you could barely detect that it was running.

#### **Easy Profile Change**

Motion parameters such as index angle, speed, acceleration, and dwell are very simple to change with the Housed DDR motor. The mechanical indexer does not support flexible motion profiles.

#### **Better Value**

The Housed DDR motor is attractively priced compared to the mechanical indexer it replaced. When the other advantages listed above are also considered, the Housed DDR motor was the obvious choice.

#### **Housed DDR Features**

- » 4 frame sizes
- » Robust cross-roller bearing
- » Dual bearing option
- » IP67 option
- » Continuous torque range: 5.8 Nm (4.3 lb-ft) to 339 Nm (250 lb-ft)
- » Optimized torque output with high-pole count efficient electromagnetic design
- » Integrated high-resolution sine-encoder
- » 134,217,728 counts per rev resolution, 27 bits
- » Feedback accuracy: +/- 26 arc-sec
- » Repeatability better than 1 arc second

#### Housed DDR Motor Advantage

Consider how a Housed DDR motor improved a medical manufacturing machine.

Product is located at the steel pins on the outside of the machine's turret as shown. The 115 kg load wheel has an inertia of 20 kg-m<sup>2</sup>. There are 96 steel pins for an index angle of 3.5 degrees to move.

#### The move is accomplished in less than 100 ms.

#### **Housed DDR Benefits**

- » Transmission elements such as couplings, toothed belts, spindles, and other fitted components can be eliminated
- » Mechanical design is made much simpler
- » Power transmission without backlash
- » More compact machinery assemblies
- » Increased performance for the entire system

## **KBM Series Frameless Brushless Motor**

### The KBM frameless motor series direct drive technology

KBM frameless brushless motor models are engineered to provide the high-performance, long life and simple installation that today's design engineers demand. Optional latching digital Hall effect sensors are pre-aligned and factory installed with added axial rotor length to achieve proper triggering. Choice of insulation allows operation over a wide range of line input voltage. Our detailed selection guide provides a variety of pre-engineered options and configurations that are currently available.

#### **Custom Application Solutions**

For customized features, contact Kollmorgen to help us understand exactly what you need and how we can further optimize any KBM or engineer a new custom motor solution for the unique requirements of your application. We are experts in providing optimized solutions such as special winding configurations, tailored mounting features, diameter and stack length dimensional adjustments, or material variations.

### The Benefits of KBM Frameless Motors

» Industry-Leading Frameless Motor Performance	<ul> <li>Advanced electromagnetic designs deliver maximum torque density which minimizes required motor space envelope</li> </ul>
	<ul> <li>Extremely smooth rotation with minimal cogging and low total harmonic distortion (THD)</li> </ul>
	» Broad operating speed range and rapid acceleration
» Quality Construction Ensures Reliability and Safe Operation	<ul> <li>Redundant magnet attachment to rotor on high- speed models – adhesive bonding and high-strength banding</li> </ul>
	<ul> <li>155°C motor winding temperature rating with integral thermistor allows continuous safe operation for demanding applications</li> </ul>
	<ul> <li>» Designed with UL-recommended insulation systems to simplify system regulatory approval</li> </ul>
	» RoHS compliant material selection
	» Compliant with Harmonized Type C Standards EN60034-1:2004 - Rotating Electrical Machines and where appropriate in accordance to the Low Voltage Directive 2006-95-EC
» Highly Configurable Design Minimizes Time to Solution	» 14 frame sizes with multiple stack lengths
	» Standard sensor feedback using Hall effect sensors
	» Standard high and low voltage insulation
	<ul> <li>Multiple standard windings with custom windings available upon request</li> </ul>

» Mechanical interface changes easily accommodated

## **KBM Series Overview**

Kollmorgen, the global leader in direct drive motor technology, is pleased to offer KBM series frameless brushless motors. With a wide variety of sizes and torque ranges available, KBM models are engineered to provide the high-performance, long life and simple installation that today's design engineers demand.

#### **Quality Construction**

- » Fully encapsulated stator windings
- » 155°C internal winding temperature continuous capability
- » PTC thermistor (avalanche-type) overload protection
- » High performance magnets
- » Fail-safe bands over rotor magnets\*
- » RoHS compliant

#### Available Options (No engineering fees apply)

#### Sensor Feedback (KBMS models)

Latching digital hall effect sensors are pre-aligned and factory installed on the lead end of the stator. Wiring instructions and electrical timing diagrams are included in this selection guide. KBMS models include added axial rotor length to achieve proper sensor triggering.

#### **Choice of Insulation System**

**S (standard)** – acceptable for applications up to 240 Vac drive amplifier supply.

**H (high voltage)** – required for applications >240 Vac and up to 480 Vac drive amplifier supply.

**Allowed Modifications** (Engineering fees apply. Consult Kollmorgen Customer Support for guidance or to obtain a quotation. Unit price increase may apply, depending upon extent of modification.)

#### **Special Windings**

Motor windings may be optimized to provide desired speed and torque performance according to the unique voltage and current requirements of a customer's application. Kollmorgen engineers must confirm electrical feasibility and manufacturability of each special winding arrangement prior to quotation.

#### **Special Rotor Hub Dimensions**

Rotor hubs may be provided with special customerdesignated hole patterns, mounting features or smaller inner bore diameters. Standard KBM(S) models shown within this selection guide include the largest available inner rotor bore diameter.

#### Rotor Hub Material

Standard configuration KBM(S) rotor hubs are constructed from non-plated cold rolled steel. If special plating, coating, cleaning or alternate material is desired, Kollmorgen engineers must confirm feasibility and pricing adjustment prior to quotation.

#### **Stator Sleeve Material**

Standard configuration KBM(S)-10, 14, 17, 25, 35, 45, 163 and 260 size stators are designed with uncoated aluminum sleeves around the stator lamination stack. If special coating or plating is desired for the aluminum stator sleeve, Kollmorgen engineers must confirm feasibility and pricing adjustment prior to quotation. Stator sleeves are only utilized for the sizes listed above.

#### **Agency UL Information**

KBM(S) motors are designed to facilitate UL certification in the customer's higher-level assembly. Stator insulation systems are constructed entirely from agency-approved materials and are designed in full compliance with agency creepage and clearance dimensional guidelines. Dielectric strength between winding circuit and grounded metal stator surface is tested at agency-specified voltage level. Because a frameless motor's compliance with agency requirements is dependent upon correct installation and proper design of the surrounding enclosure by the user, KBM(S) series products are not formally labeled or agency-approved at the frameless motor level.

\* Does not apply to KBM 163 and KBM 260.

## **KBM(S)** Continuous Torque Overview

Select from our wide variety of sizes and torque ranges to suit your application needs.

For more detailed information please visit: http://www.kollmorgen.com/en-us/products/motors/direct-drive/kbm-series-frameless/

## **TBM Series Frameless Motors**

The TBM frameless motor is a series of direct drive torque motors designed for applications that require high power in a small, compact form factor with minimized weight and inertia.

Typical applications include robotic joints, weapon stations, sensor gimbals, sight systems, UAV propulsion and guidance, as well as many others.

### **TBM(S)** Product Features

- 3 frame sizes ranging from 60mm (2.36 inches) up to 129mm (5.08 inches)
- 3 stacks lengths per frame
- 2 standard winding options per frame
- Latching Hall Effects (pre-aligned / factory installed)
- Low Cogging designs
- Stainless Steel Yokes for maximum corrosion protection
- RoHS Compliant
- Banded Rotors
- Laser Marked Armatures

For non-standard requests Kollmorgen provides a variety of standard options and configurations.

If higher levels of customization are required, contact Kollmorgen to help us understand exactly what you need.

## TBM(S) Continuous Torque Overview

Select from our wide variety of sizes and torque ranges to suit your application needs.

For more detailed information please visit: http://www.kollmorgen.com/en-us/products/motors/direct-drive/tbm-series/

## **Stepper Drives and Motors**

Our stepper motors, drives and controllers, which accommodate a wide range of power requirements, provide a high-performance, yet very cost-effective solution when you need precise motion control.

Our hybrid stepper motors are some of the highest torque-density motors in the industry. Available in several NEMA frame sizes, these 2 phase stepper motors inherently move in small, precise 0.9 or 1.8 degree increments (400 or 200 steps/revolution). This stepping action is simple to control and does not require complicated, expensive feedback devices. Our stepper motors are excellent alternatives to pneumatic, hydraulic and servo motor systems.

Kollmorgen's stepper drives are designed with versatility, ease-of-use, and cost-effectiveness in mind. Choose from a broad range of advanced drives and controls including full, half, and microstepping models in both modular and packaged designs.

Kollmorgen's stepper drives and motors are designed with versatility, ease-of-use, and cost-effectiveness in mind. The motors provide high torque in a small package and come in a wide range of standard sizes, constructions, windings and options. They are available with custom leads, shafts and connectors are routinely provided to effectively solve your application needs. Several models feature the addition of our innovative SIGMAX<sup>®</sup> technology for higher torque and acceleration rates.

SS Series Synchronous

SS Gearbox Synchronous

## **P-Series Drive Features and Benefits**

### P5000

### P6000

#### Value DC Input Stepper Drive

- » Wave matching for Kollmorgen motors to provide optimal performance
- » All inputs and outputs are optically isolated
- » Step and direction inputs or internal velocity controlled oscillator (VCO) dip switch selectable
- » DIP switch selectable microstepping resolution settings
- » Idle current reduction, DIP switch selectable
- » Compensation for mid-range instability
- » RoHS & CE certified
- » UL pending

#### Full Featured AC Input Stepper Drive

- » No programming required
- » Covers full power range of Kollmorgen steppers
- » Switch selectable current from 0.2-5.7 Arms, 8.0 A peak
- » Switch selectable for many Kollmorgen motor parings
- » All inputs and outputs are optically isolated
- » Single-ended and differential step and direction
- » Enable input
- » Switch selectable micro-stepping resolution
- » Anti-resonance based on load inertia
- » RoHS & CE certified

### P7000

#### Full Featured AC or DC Input Stepper Drives with Intelligent Indexing Option (-PN)

- » AC and DC input versions
- » Covers full power range of Kollmorgen steppers
- » Drives can be configured by either dip switches or P7000 software
- Intelligent indexing option (-PN) provides ability to link motion tasks.
- » All inputs and outputs are optically isolated
- » Single-ended and differential step and direction
- » Enable input
- » Switch selectable micro-stepping resolution
- » Anti-resonance based on load inertia
- » RoHS, CE and UL certified

### Budget/Value

### Full-Featured

#### STEPPER DRIVE PRODUCT OVERVIEW

Stepper Drive Model	Modes of Operation*	Input voltage (Vdc)	Input Voltage (Vac)	Output current (Adc) Continuous (Peak)
P5000	S, V	20 - 75	n/a	0.7 - 2.0 (3.5)
P6000	S	n/a	120/240	0.3 - 5.7 (8.0)
P70530	S, M	20 - 75	n/a	0 - 5.0 (7.1)
P70360	S, M	n/a	120/240	0 - 2.5 (3.5)

Modes of Operation: S - Step and Direction; V - Velocity Controlled Oscillator (VCO); M - Motion Node Indexing

### **P5000 Stepper Drive Controller**

### Big Performance, Micro Package.

The P5000 is a compact micro-stepping stepper drive optimized for high system performance with Kollmorgen's industry leading POWERMAX II stepper motors. It is an impressive yet simple addition to the Kollmorgen stepper drive family.

#### Optimized. Smooth. Compact.

Pairing a stepper system doesn't get any easier! The P5000 and Kollmorgen stepper motors are meant to be together. With Kollmorgen motor windings optimized for the P5000, all you have to do is set the dip switches for the motor you are paired with and you have a smooth operating system that fully utilizes the potential of your Kollmorgen motor and drive combination!

P5000 Stepper Drive (Shown Actual Size)

#### Features

- » Current output from 0.7-3.5 Arms peak; DIP switch selectable in 0.2 Amp increments
- » Bus Voltage 20-75 Vdc
- » Wave matching for Kollmorgen motors to provide optimal performance for the Kollmorgen Stepper Motor Families.
- » All Inputs and Outputs are Optically Isolated
- Command Source from External Step and Direction Inputs or Internal Velocity Controlled Oscillator (VCO); DIP switch selectable
- » External Single-Ended Step and Direction Command
- » Disable or Fault Reset Input
- » Fault or Enable Output
- » Pulse Multiplier smooths micro-stepping\*
- » Idle Current Reduction; DIP switch selectable

\*Patents Pending

» Compensation for mid-range instability\*

LLMORGEN

- » VCO Mode
- » CW Limit Input
- » CCW Limit Input
- » Run/Stop Input
- » Run/Stop Output
- » CW Speed trimpot
- » CCW Speed trimpot
- » Accel/Decel trimpot
- » DIP switch selectable micro-stepping-resolution settings
- » RoHS & CE certified
- » UL pending

### P6000 Stepper Drive Controller

### Powerful, Yet Simple.

The P6000 is an AC input micro-stepping drive optimized for pairing with POWERPAC and POWERMAX stepper motors. With the simplicity of dip switches and the optimized performance from the complete system, this stepper solution brings increased machine performance without the associated complexity.

#### Powerful. Simple. Optimized.

The P6000 and Kollmorgen POWERPAC and POWERMAX stepper motors are designed to provide the best system solution when paired with one another. The easy dip switch selection matches the P6000 settings with the optimal Kollmorgen stepper motor requirements to provide the best performance and most efficient solution for nearly any application.

P6000 Stepper Drive

#### Features

No programming required! Covers full power range of Kollmorgen Stepper Motors Switch Selectable Current Output from 0.2-5.7 Arms, 8.0 A peak 120/240 VAC Input (160/320 Vdc Bus) Kollmorgen Stepper Motor Pairing; Switch Selectable All Inputs and Outputs are Optically Isolated Single-Ended and Differential Step and Direction or CW/CCW Command; Switch Selectable Enable Input Fault Output (Sinking or Sourcing) Status LEDs for easy troubleshooting Switch Selectable Micro-Stepping-Resolution Settings

Step Smoothing Filter; Switch Selectable

- Idle Current Reduction; Switch Selectable
- Anti-Resonance Based On Load Inertia: Switch Selectable
- Self-Test Conducts Spin Test to Confirm Proper Connection; Switch Selectable

**RoHS & CE Certified** 

## **P7000 Stepper Drive Controller**

# P7000 stepper drives offer a unique level of system functionality, smoothness, high-speed performance and innovation unmatched in the industry.

The compact P7000 is designed to power Kollmorgen step motors ranging from NEMA size 17 up to NEMA size 42. Two power configurations are available for operation directly from AC power, or from a DC power supply.

There are two levels of control offered. The basic drive accepts step and direction inputs. P7000 drives are also available with an integrated position controller (-PN option). The drives are configured by either on-board dip switches, or with the P7000 tools software.

#### Multistepping<sup>™</sup>

Also known as auto-smoothing. The P7000 drive accepts full step pulse commands from the indexer and inserts fine micro-steps to smooth coarse low speed motion. This allows you to significantly upgrade machine performance without having to redesign machine control architecture.

#### **Auto-Tuning**

Advanced current auto-tuning techniques provide outstanding low-speed smoothness. The P7000 senses the motor's characteristics and automatically fine tunes itself to meet your high-performance needs. This reduces installation and set up time

This reduces installation and set-up time.

#### Mid-Band Anti-Resonance Control

Reduces negative effects of mechanical resonance, allowing you to get more out of a smaller motor and virtually eliminating nuisance stalls and machine downtime.

#### **Idle Current Reduction**

If you do not require the motor's full torque to hold a load at rest, you can select the right amount of current (torque) to reduce motor heating and power consumption. This increases the life of the system.

#### **Dynamic Smoothing**

Quasi-S-curve algorithm reduces jerk, especially upon acceleration. Increases mechanical life of the machine and reduces energy consumption.

#### **Intelligent Indexing Option (-PN)**

Wizard-like P7000 helps you to develop and link motion tasks such as homing and conditional and unconditional indexing. You can be up-and-running quickly.

#### Modbus RTU Compatible

The intelligent indexing option (-PN) supports Modbus RTU to control motion with an external interface device. External interfaces make controlling motion simple for machine operators.

#### P7000 Tools

The position node option allows you to configure up to 63 absolute or relative moves. You can specify the moves' distance, acceleration, velocity, and deceleration rates, or simply specify the distance and total time for the move – P7000 will perform the calculations automatically.

Specifications	Units	P70530	P70360

## **Hybrid PMX Step Motor**

### Kollmorgen's PMX<sup>™</sup> stepper motor line delivers breadth and design flexibility at competitive lead times.

Kollmorgen is excited to continue its winning heritage in hybrid stepper motors with the PMX family. Leveraging the best practices from customer preferred products in the POWERMAX and POWERPAC families, the PMX lines will deliver breadth and design flexibility at a very competitive lead time. Look no further for that hybrid stepper motor family with local support that gives you the flexibility you need to succeed.

PMX Series motors include smaller Nema 08, 11, and 14 frame sizes in addition to the traditional Nema 17, 23, and 34 frame sizes. Each frame size is built with high quality construction in an affordable, market competitive solution. Numerous co-engineering options are also available including: customizing shafts, encoders, and mounted spur and planetary gearboxes.

PMX Stepper Motors

- » Minimal Drive Adjustments options for 1.8 and 0.9 degree step angles
- » Lower Unit Cost PMX motors are priced competitively in today's current stepper market and are the lowest of all Kollmorgen stepper products
- » Quality Construction translates to reliability in the field and a long service life
- » Localized Support gives you the delivery terms and immediate technical support you need, meaning quicker time to market and less downtime
- » Flexible Manufacturing enables Kollmorgen to immediately evaluate modifications and coengineered solutions for rapid prototyping
- » Easy to Apply Worldwide CE, RoHS, REACH

#### **Many Applications**

PMX motors allow Kollmorgen customers to fulfill their automation needs at an affordable cost, enabling higher throughput in a wide variety of equipment. In addition, leveraging Kollmorgen's technical expertise and flexible engineering, the PMX is ready for seamless special and co-engineering options, allowing for swifter and easier integration into both new and existing applications.

## **CT Series Step Motor**

#### **CT** Series

CT Series motors include the most popular sizes, options and value suitable for most commercial and industrial applications. Enhanced motors provide the maximum performance available. This patented technology boosts torque an additional 25% to 40% across the entire speed range, and allows machines to be designed that are smaller and move faster.

#### **CT Series Benefits**

- » Smaller drives result in a lower system cost
- » More torque allows for smaller, faster machines
- » Higher efficiency enables lower operating costs

## **POWERPAC N/K Series Step Motor**

#### N/K Series

The N/K Series are larger step motors with the power, rugged construction, and options that make these motors ideal for heavy industrial applications. Options include: IP65, terminal boxes and MS connectors. Enhanced versions provide the maximum performance torque available. This patented technology boosts torque an additional 25% to 40%. Custom motors are available to meet specific application needs including: modified shafts, connectors, lead-screws, and components mounted to the shaft.

#### **N/K Series Benefits**

» More torque to drive heavy loads

Size 34 N/K

- » Smaller drives result in a lower system cost

#### **Electric Cylinders (EC)**

Primarily designed to apply a force through an extendable rod, electric cylinders are a clean and efficient replacement for hydraulic actuators and pneumatic cylinders, and an alternative to many types of linear transmissions. A wide variety of mounting and coupling alternatives significantly increases their problem solving potential.

#### **Rodless Actuators**

Long travel, quiet operation, and high moment loading differentiates rodless actuators from other mechanical transmissions.

#### **Precision Tables**

Positioning tables are used when accurate and repeatable motion is critical (1 part per 10,000 or better). These tables offer a wide variety of single and multi-axis configurations, open and closed frame tables, ball or lead screw driven, and overhung and constant support for Kollmorgen geometry configurations.

Model	Max Speed <sup>3</sup>	Max Thrust <sup>2, 3</sup>	Repeatability <sup>4, 5</sup>	Max Payload	Max Travel

Precision Tables	32.5 (825)	440 (1960)	to ± 3 microns (commercial grade) / ± 1.3 microns (precision grade)	794 (360)	79 (2000)

Notes:

Electric cylinders are designed primarily for thrust application where loads are supported externally.
 Thrust ratings are based on mechanical limits rather than motor limits unless indicated otherwise.

An association of the chain of

## EC / N2 Series Electric Cylinders

Electric cylinders are thrust-producing devices that are best suited for applications requiring high axial force with the moment and side loads already properly supported.

Kollmorgen has combined the broad product offering of the N2 and EC Series electric cylinders with the industryleading AKM servo motors and AKD servo drives. The N2 and EC Series of electric cylinders offer a wide range of available thrusts in standard units from 600 lb (N2) to 5620 lb (EC5) across 5 electric cylinder frame sizes.

- » Speeds up to 52 in/sec are available and integrated geared options provide the ability to increase thrust capacity for lower speed applications, leveraging the speed capacity of servo systems.
- » Multiple servo motor options are available for the product line ranging from NEMA 23 size to NEMA 42 size servos. The combination with the AKM servo motor enables the use of various feedback devices including sine-encoder and the low-cost but high-performance Smart Feedback Device (SFD) when used with the AKD servo drive.
- » Windings and voltage operation are not differentiated in MOTIONEERING<sup>®</sup>. All systems are offered at all voltages (240, 400, 480).
- » The AKM servo motor comes mounted on the electric cylinder as specified by the electric cylinder part number. This eliminates time to match the motor to the electric cylinder and eliminates potential mechanical incompatibility.

#### **EC Servo Linear Actuators**

- Designed for performance
- Highest quality precision rolled ballscrews and lead screws for quiet, long-life operation
- Brushless Servo motor and Stepper motor options available
- Sealed for IP54 protection. IP65 option available.
- Thrust up to 25000 N [5620 lb]
- Speed up to 1.3 m/s [52.5 in/s]
- Metric design (ISO 6431)
- Available in 5 power ranges EC1, 2, 3, 4 & 5

#### N2 Servo Linear Actuators

- Smallest Package Size
- Time-Proven Design
- Improved Durability Over Previous Designs
- Thrust up to 2670 N [600 lb]
- Speed up to 0.76 m/s [30 in/sec]
- English dimensions (to NFPA standards)
- Brushless Servo with encoder, resolver or SFD feedback
- · Stepper motors also available

#### Typical Construction (EC2 cut-away shown)

#### Kollmorgen offers electric cylinder drive mechanisms designed around either lead screws or ballscrews.

Ballscrews, being the more efficient of the two, utilize ballnuts riding on recirculating ball bearings resulting in higher speeds, loads and cycle rates. However, the more efficient design of ballscrew technology lends it to being backdriven when power is removed if precautions are not taken (e.g., electric brakes or counter loading).

Lead screws are capable of holding the load in position when power is removed, but are less efficient in operation.

Kollmorgen's guide system prevents rotation of the ball / lead nut, thus eliminating any torque loading to machine linkage.

#### **Electric Cylinders Are Preferred When:**

- Positioning an externally guided and supported load.
- Moving a load that pivots.
- There is a high concentration of airborne contaminants (rodless actuators are inherently less well protected).
- Replacing a hydraulic or pneumatic cylinder with an electro-mechanical solution.

### **R-Series Rodless Actuators**

The name rodless actuator comes from this technology's close relationship to electric cylinders, sharing many of the same components. Rather than having a rod, rodless actuators incorporate a carriage supported by linear bearings. Where electric cylinders are designed to extend in and out of the work area delivering force or thrust, rodless actuators are designed to be load carrying mechanisms (up to 300 lb) incorporating ballscrews, leadscrews, or belt drive transmissions with optional integrated gearboxes.

Rodless actuators also share many of the fundamental design characteristics of precision positioning tables. Precision tables are designed to carry larger payloads and deliver superior repeatability and accuracy. Rodless actuators offer longer travels and higher speeds at a lower price. Screw driven rodless actuators are also thrust-producing devices that are best for axial force applications where the space is limited and a payload must also be supported or carried. As individual components, rodless actuators are not well suited for moment loading; however, they can be effectively combined into complete Cartesian systems for some multi-axis applications. For higher speed, lower thrust applications, rodless actuators can be repeatability-driven with a timing belt instead of a screw.

Kollmorgen has combined the broad product offering of the R-Series rodless actuators with the industry-leading AKM servo motors and AKD servo drives. The R-Series of rodless actuators offer a wide range of available thrusts in standard units with three basic frame sizes (R2A, R3, R4).

Rodless actuators offer longer travels (up to 108") and higher speeds (belt drives up to a maximum speed of 120 in/sec). Integrated geared options provide the ability to increase thrust capacity for lower speed applications leveraging the speed capacity of servo systems.

Multiple servo motor options are available for the product line, ranging from NEMA 23 size to NEMA 42 size servos. The combination with the AKM servo motor enables the use of various feedback devices including sine-encoder and the low-cost but high-performance Smart Feedback Device (SFD) when used with the AKD servo drive.

The AKM servo motor comes mounted on the rodless actuators as specified by the rodless actuator part number. This eliminates time to match the motor to the electric cylinder and eliminates potential mechanical incompatibility.

The operation of rodless actuators is similar to the electric cylinders described earlier. However, instead of an extending rod, a rodless unit features a moving carriage supported by linear bearings within an extruded aluminum chassis. This gives the rodless actuator the ability to guide and support a load, as well as position it.

Kollmorgen rodless actuators are designed for outstanding overall performance, value, flexibility and reliability in industrial applications.

#### **Rodless Actuators Are Preferred When:**

- » A low cost system is needed to both position and guide a load
- » It is desired to eliminate external guides and ways
- » The shortest overall work envelope (extended length equals retracted length) is required
- » Multiple units will be combined into Cartesian systems
- » There is a need for a compact cross-sectional linear positioning system

#### **Typical Construction**

## DS4 / DS6 Series Precision Tables

Precision positioning tables are best suited for applications where the accuracy and repeatability requirements are more important than axial thrust of the drive train. Precision positioning tables can also be used in less precise applications where adequate moment load support is necessary, and are ideal building blocks for complete multi-axis positioning systems.

The DS4 and DS6 are Kollmorgen's most versatile and modular line of positioning tables.

### Combined with the AKD <sup>®</sup> Servo Drive and AKM<sup>®</sup> Servo Motors, DS4 and DS6 Systems Offer

- » An optimized electromechanical solution suitable for demanding high precision positioning
- » Performance and versatility in a compact package
- » Outstanding industrial durability
- » Tremendous configuration flexibility
- » Industry-leading price vs. performance value

#### **DS Series Design Features**

Following are several features that make the DS Series the positioning table of choice for the most demanding applications:

Travel lengths from 50 mm to 2 m cover a wide range of applications.

Precision ballscrew drive, with 5 mm, 10 mm and 25 mm leads, offers high speed and efficiency, excellent repeatability and accuracy, and mechanical advantage.

Proven magnetic stainless steel seal strip technology effectively seals the internal components of the DS Series, protecting the ballscrew and ways from contaminants. This feature also contains ballscrew and way lubrication within the DS Series.

Easily configurable modular design and option set, including a variety of motor mounting orientations, motor sizes and type, ballscrew leads, coupling types and sizes, encoder feedback options, limit/home sensor types, and shaft brakes allow the DS Series to be customized to meet your specific requirements.

DS Series precision tables can be ordered in a variety of multi-axis configurations including XY, XZ, and XYZ or cartesian arrangements. Consult Kollmorgen applications engineering for standard and custom configurations.

A second option is to order standard multi-axis brackets and assemble the axes yourself.

#### Unique IDEAL-SEAL Magnetic Cover Strip Locking Device

Entire length of lead screw and linear bearing system are protected, providing both operator safety and protection from contaminants.

Seal strips are always properly tensioned, drastically decreasing wear that requires regular field repair.

Allows easy access to interior of DS4 for mounting and maintenance.

No small hardware or springs to lose, and no exposure to the sharp ends of the strips, which are problems for similar seal end-cap designs.

#### **Configurable Options**

DS Series	
Servo motor options	AKM23D, AKM42G
Grades	Precision* (up to 600 mm), Commercial
Motor orientations	In-line, parallel right/left/under
Couplings options** (inline configurations)	Bellows
Transmission ratio (parallel configurations)	1:1
Limit sensors	PNP (sinking) inductive proximity sensors, 5-30 Vdc
Home sensor	PNP (sinking) inductive proximity sensors, 5-30 Vdc
Shaft brake	Electromagnetic power of holding brake, 24 Vdc
Linear encoder options	1.0, 0.5 and 0.1 motion resolution, modular incremental type

\* Additional lead time applies to precision grade. Contact customer support for details. \*\* Additional couplings available. Contact customer support for details.

#### Accessories

DS Series	
Toe clamps	Provide convenient external mounting to a base plate or to riser blocks
Narrow riser blocks	Raise unit for clearance of larger motor options, utilizing internal base mounting features on the side
Wide riser blocks	Allow rising of the unit, independent of base mounting features
Brackets and mounting plates	Facilitate multi-axis configurations
Cable sets	For connection to AKD and other drives

All DS4 and DS6 tables will bolt directly together in a standard XY without modification.

Seal Strips

Limit Sensor

Linear Encoder

Toe Clamp

\*All performance specifications are based upon proper mounting procedures, with the DS table fully supported on a flat surface (flat within 0.008 mm/300 mm). Positional accuracy and repeatability specifications are for inline motor mount models only. Contact customer support for specifications of parallel mount configurations. Above specifications are measured 37.5 mm directly above the center of the carriage. Specifications are based upon operation at 20° C.

## **PMDC Permanent Magnet DC Motors**

Why have design engineers depended on Kollmorgen permanent magnet DC motors for nearly 50 years? Value and Performance. Rugged, quality construction, backed by a 2 year warranty.

Plus, when you need something special, you know we've built thousands of custom-designed motors. Many more than we could ever show with these pages.

And if we don't have just what you need, we'll design a new one, even for a modest volume requirement.

#### **Standard PMDC Motor Features**

## **SR/SRF Series Continuous Duty Motors**

#### **General Specifications**

#### SCR Rated NEMA Standards

- » NEMA C face with removable base except the 180 V / 1.5 HP has a welded base
- » Class H insulation
- » UL Recognized (UL 1004, File E61960)
- » CSA Certified (CSA Standard C22.2 No. 100, Class 421101, File LR43477)
- » CE marked. Conforms to EN60034-1 and EN60034-5
- » 1750 RPM

# **Optimized Solutions**

# Applying Our Knowledge to Meet Your Motion Needs

# Optimize the Package, Performance and Features

» We provide solutions that meet your needs, including the ability to get optimum performance for the smallest package size.

» Our products deliver superior quality, throughput, efficiency, and performance.

# Reduce Waste and Costs

- » We have thousands of proven designs upon which to build new solutions. Our application experience expedites the design cycle, which enables you to be fully operational sooner.
- » Great value is delivered in the final product.

# Meet the Most Challenging Requirements

- » Designs are developed for manufacturability.
- Designing and manufacturing unique products are our core competencies.
- » We have the broadest capabilities in the industry.

# **Compete and Win**

Kollmorgen can translate your needs, from design to installation, into a custom motion solution that makes your end product more competitive – driving market share and profitability for your company.

For flexible production runs, from high volume to one piece, Kollmorgen provides on optimized solution that fits your needs – perfectly.

# **Optimized Solutions**

Whether it's modifying a product from our standard catalog or a white sheet design for a custom solution, you can rely on decades of Kollmorgen expertise to solve your motion challenges and help your machine stand out from the crowd.

### **Modified Standard**

Because our application expertise runs deep and our product portfolio is so broad, we can take any standard product and modify it a lot or a little to suit many needs – in a very rapid time frame. This approach ensures quality, performance and reliability by leveraging our proven track record.

Kollmorgen application engineers have a great deal of experience helping OEM engineers achieve their objectives: Typical motor modifications include shaft, housing, winding and through-bore alterations; feedback type; mounting and connectors; ruggedization (high-shock-and-vibration), vacuum-duty, radiation-hardened, explosion-proof. Typical drive modifications include housing, mounting and heatsinking; connector type; I/O type- and count; field buses and motion buses; special cabling; ruggedization (high-shockand-vibration).

## **Custom Products**

With motion as our core capability, we bring a significant history of innovation to today's engineering challenges. We leverage our design and engineering excellence and technical knowledge to deliver creative new solutions for virtually any need. Our vast experience also helps us deliver a custom product in a surprisingly short time. If you can conceive it, we can make it happen.

### **Project Management**

We follow a structured development process from initial concept to volume production. This enables us to provide a complete solution from design to implementation.

Our skilled engineering team is assigned to each project and ensures a high quality product, designed and delivered on time, successfully taking the prototype to full production.

- » Dedicated Resources & Equipment
- » Real Time Customer Collaboration
- » Validation of Performance, Cost & Manufacturability Before Volume Production

# Why You Should Partner with Kollmorgen

- » Experienced application engineers help define a customer's needs and identify the optimal Kollmorgen products and technologies
- » Products optimized or developed by cross-functional teams to meet customer needs
- » Rapid prototyping
- » Smooth transition from prototype designs to sustainable and cost effective manufacturing
- » Industry-proven quality, performance, and delivery
- » Proven technology building blocks mitigate risks of customization

### **Customer Visibility Throughout the Entire Process**

A communicative and proactive approach keeps you updated and aware of what is required throughout, what it will cost, and what to expect for design testing.

This not only puts you in charge of approving any modifications before installation, but ensures the product is up and running quickly, with minimal development time and maximum value.

#### **Engineering Excellence**

What really sets us apart is our engineering expertise. With over 50 years of successfully designing custom motors, we are able to quickly assess, design and implement a solution that meets your needs.

Our engineers have extensive knowledge and experience, which means they have designed solutions for almost every unique and challenging situation. Their insightfulness and expertise will guide you through the development and implementation of an optimized motor solution.

We rely on the most advanced simulation tools to deliver the best products, designed to withstand the most unique and challenging environments:

- » 3-D Modeling -ProE
- » Finite Element Analysis
  - Electromagnetics
  - Structural (stress, vibration, fatigue)
  - Thermal
- » Speed
- » Infolytica
- » Ansys
- » Magneto

# **Capabilities to Meet Your Needs**

Kollmorgen offers competitive lead times on nearly 1,000,000 commercial off-the-shelf (COTS) products, all with best-in-class performance and quality.

When COTS is not quite the best way to realize a totally optimized system, Kollmorgen can offer coengineered solutions to meet your most difficult challenges and advance your competitive position. Drawing on a wealth of knowledge and expertise, our engineering support team will work alongside you to build a solution that differentiates your machine and improves your bottom line.

Here are just few examples of how Kollmorgen delivers real value to companies likes yours:

What You Need	Why Motion Matters	Kollmorgen Co-Engineering Results				
30% Increase in Throughput	<ul> <li>» Low inertia servo motors</li> <li>» High bandwidth servo loops</li> <li>» Simple, accurate, graphical programming tools</li> </ul>	Using the Kollmorgen Automation Suite <sup>™</sup> graphical camming design tool, Pipe Network <sup>™</sup> and low-inertia AKM <sup>®</sup> servo motors, a major supplier of diabetic test labs increased throughput by more than 30% while improving accuracy and reducing scrap.				
50% Increase in Accuracy and Quality	<ul> <li>» Low cogging frameless servo motor</li> <li>» Advanced observers and bi-quad filters</li> <li>» Fast control loop update rates (.67µs)</li> </ul>	Using our AKD <sup>®</sup> servo drive, a next- generation CT scanning manufacturer achieved more than 50% improvement in velocity ripple to produce the most accurate and detailed medical images possible while overcoming an extremely high moment of inertia.				
25% Increase in Reliability (Overall Equipment Effectiveness)	<ul> <li>» Innovative Cartridge Direct Drive Rotary<sup>®</sup> DDR motor</li> <li>» Eliminating parts on the machine</li> <li>» No additional wearing components</li> </ul>	Using Kollmorgen's award-winning Cartridge DDR <sup>®</sup> servo motor technology, we eliminated more than 60 parts in a die-cutting machine and increased the OEE by 25% and throughput by 20%.				
50% Reduction in Waste	<ul> <li>» Superior motor/drive system bandwidth</li> <li>» DDR technology: <ul> <li>eliminates gearbox</li> <li>20X more accurate than geared solution</li> </ul> </li> </ul>	We helped a manufacturer of pharmaceutical packaging machines incorporate Housed DDR motors to increase the throughput by 35% and <b>reduce scrap by more than 50%</b> through more accurate alignment of the capsules.				

# **Optimized Solutions Process**

Comprehensive design, manufacture and test capabilities ensure the end product meets the customer performance specifications and quality requirements. Our skilled engineering team works directly with each customer throughout the process, quickly taking the prototype to full production.

# **Proven Design Capabilities**

## **Motor Solutions**

- » Brushed, brushless and stepper motor building blocks used in frameless or housed configurations
- » Designed for agency compliance (UL, CE, RoHS)
- » Voltage ratings from 48 Vdc 600 Vdc, with capabilities in 800 Vdc and up
- » Continuous torques from 0.5 Nm 29,000 Nm
- » Proven performance and reliability in a customizable package

# **Drive Solutions**

- » Board-level or packaged solutions supporting single to multi-axis configurations
- » Brushed or brushless servo drives, stepper, AC induction control
- » Integrated controller and communications options
- » Designed for agency approvals (UL 508C, EN 50178, EN 61000-6-6, EN 61800-3, CISPR 14-1, and others available)
- » Proprietary technology and software can be embedded into the drive

Medical diagnostics drive optimized for form-factor, I/O and EMC

2-axis drive for high-power robotics, optimized for form-factor and communications interface

Frameless direct drive rotary motor with water cooling features

200 kW electric starter/generator

Custom submersible motor

4-axis stepper drive using SynqNet

**Motors and Electronics** 

Optimized for	Application					
Reliability, weight	Implantable heart pumps, military, remote equipment					
Precision	Pick and place, satellite tracking, film processing					
Package size	Medical imaging, ground based telescopes, aircraft instrumentation, collaborative robotics					
Smooth operation	Medical respirators, high precision robotics, printing and textile machines					
Harsh environments	Deep sea, outer space, high shock and vibration, extreme temperatures					

# **Kollmorgen Motors for Special Duty**

Every day Kollmorgen pushes the boundaries of motion to deliver optimized solutions that satisfy even the most demanding application requirements in the harshest of environments.

We've been working with the biggest names in harsh and hazardous environments in Industry, Automation, Aerospace & Defense, Exploration, Nuclear, Medical and Robotics for nearly 60 years.

We are on Mars and the Moon and at the bottom of the oceans: In fact, Kollmorgen motors powered the legendary ROV Jason Jr. at a depth of 3,784 meters (12,415 feet) to explore the interior of Titanic for the first time since it sank in 1912.

Kollmorgen continues to collaborate with leading innovators with the same enthusiasm and acumen: Kollmorgen knows that motion matters and represents endless possibilities for innovation. Our engineering expertise and engineering capabilities enable us to deliver superior performing solutions for these demanding environments.

#### **Goldline® S Series Submersible Servo Motors**

These brushless servo motors incorporate pressure compensation technology to allow underwater operation up to 20,000 ft while withstanding extreme environments. They feature stainless steel and aluminum nickel bronze housings. All shafts are stainless steel and sealed with an externally serviceable O-ring seal.

- » Choice of stainless steel and aluminum nickel bronze housings
- Stainless steel shaft with externally serviceable seal
- » NEMA mounts
- Resolver feedback
- » SEACON connectors
- Pressure compensated: 5,000 psi (Co-Engineered option for 10,000 psi possible)
- > Designed to withstand severe shock and extreme environments

#### **EKM Series Brushless AC Servo Motors**

These enhanced, high-performance motors are Mil-Spec 810E rated and IP67 sealed, and comes standard with a stainless steel and chemical-agent-resistant paint, for duty in harsh environmental conditions.

- » 0.43 to 53 Nm continuous stall torque (3.8 to 467 lb-in)
- » Speeds up to 8000 RPM meet high speed requirements
- » Custom windings, shaft variations, and fail-safe brakes available
- 480 Vac high voltage insulation

- » Rugged resolver feedback for extreme environments
- » Operating temperature range of -51° C to 54° C
- » Shock and vibration tested per MIL-STD-810E, Methods 516.4 & 514.4, Procedure 1
- » International standard mount available

#### **QT Series Direct Drive DC Torque Servo Motors**

The Direct Drive DC Torque motor is a servo actuator which can be directly attached to the load it drives. It has a permanent magnet (PM) field and a wound armature which act together to convert electrical power to torque. This torque can then be utilized in positioning or speed control systems.

In general, torque motors are deigned for three different types of operation:

- » High stall torque ("stand-still" operation) for positioning systems
- » High torque at low speeds for speed control systems
- » Optimum torque at high speed for positioning, rate, or tensioning systems

#### **MX Series Hazardous Duty Motors**

The explosion-proof MX Series provides hazardous-duty stepper motors suitable for use in Class 1, Division 1, Group D locations. They are available in NEMA 34 and 42 frame sizes (90 and 110 mm), and provide minimum holding torques from 1.27 to 9.82 N-m (180 to 1390 oz-in).

- » MX09 models: NEMA 34 (90 mm) motors available in three stack lengths with minimum torque ratings from 1.27 to 3.88 N-m (180 to 550 oz-in)
- » MX11 models: NEMA 42 (110 mm) motors available in 2 stack lengths with minimum torque ratings from 6.0 to 9.82 N-m (850 to 1390 oz-in)
- » Speeds up to 3,000 rpm provide for velocity demands of most high torque applications

#### **Hazardous Duty Synchronous Motors**

These synchronous motors are available in UL Listed versions suitable for use in Class I, Division 1, Group D hazardous locations. They provide torque up to 1,500 oz-in (1059 N-cm) and are available in NEMA 42 and 66 frame sizes (110 mm and 170 mm).

- » Motor torque up to 1,500 oz-in (1059 N-cm)
- » 72 rpm at 60 Hz, 60 rpm at 50 Hz
- » 120 and 240 volt AC versions

- » UL Listed versions meet Class I, Division 1, Group D requirements
- » Conduit-style connection

#### **EP Series Explosion-Proof Motors**

These permanent magnet DC (PMDC) motors are SCR rated and adhere to NEMA standards. They are available in a variety of DC voltages, from 1/4 to 3/4 HP.

- » Patented anti-cog magnets for smooth low speed operation
- » Polyester-impregnated armature for electrical and mechanical integrity
- » High overcurrent capacity and dynamic braking
- » Rugged, fused commutator

- » TEFC and TENV configurations
- » Long life, constant force brush springs with fieldreplaceable brushes
- » Gasketed conduit box with large wiring compartment
- » Large sealed bearings, standard
- » Class H insulation

#### **EB** Series High-Performance Explosion-Proof Servo Motors

Based on our 230 VAC B and M Series, the Kollmorgen EB Series provides a high-performance explosion-proof servo motor suitable for applications where flammable vapors or gases create a potentially hazardous environment. These motors have been tested and proven capable of withstanding an internal explosion without bursting or allowing ignition to reach outside the motor frame.

- » 230 VAC explosion-proof (Class I, Division 1, Groups C and D)
- » Tested and proven capable of withstanding an internal explosion without bursting or allowing ignition to reach outside the motor frame

# **AKD® Servo Drive Accessories**

## **Mating Connectors and Shielding Kit**

Kollmorgen's servo drives are equipped with screwable mating connectors. Alternative connectors for common DC, bus, and main ports are also available. We offer shielding kits for our flexible cables for use in environments with strong interference.

## **Shielding Solutions**

AKD servo drives can be equipped with shielding plates.

### **Brake Resistors**

We offer a full line of brake resistors up to 6000 watts. Brake resistors are impedance matched with AKD and are available in many sizes and form factors.

### **Chokes and Filters**

Line filters are offered to improve reliability and to protect the life of the machine in less stable environments. Motor chokes reduce radiated emissions and are recommended for applications with cable lengths >25 meters.

### **Static Energy Storage**

Our Static Energy Storage supplies the drive with power in the event of power outages until the machine reaches a defined state. It generates a power outage signal for evaluation by the machine control system. Simple connection to the DC intermediate circuit with two cables; immediately ready for use; no adjustment; no controls. Cascade for nearly unlimited power range.

# **Braking Energy Storage**

Our Braking Energy Storage saves Energy through Intelligent Energy Feedback. Substantial saving, especially in applications with short cycle times. Simple connection to DC intermediate circuit. Simple start-up – immediately ready for use; no adjustment; no controls. Nearly unlimited power range with expansion modules.

# **Motion Bus and Service Port Cables**

We offer industrial shielded PUR cables with RJ45 connections for demanding industrial environments. These cables outperform office cables in EMC resilience, durability, and life.

### **CANopen**<sup>®</sup> Accessories

We offer cables, terminators and adapters for simple integration with CANopen machine networks.

# Kollmorgen 2G Cables

High-performance servo systems require high signal integrity. Electrical noise in the system can cause degraded performance or even instability. Therefore, well-designed connectors and cables are as critical to the system as are motors, drives and controls. A system is only as good as its weakest link.

Kollmorgen guarantees the performance and quality of its servo systems only when you use Kollmorgen-supplied motors, drives and cables. Not all cables are created equal.

Kollmorgen has done the hard work for you: The cables in this Selection Guide have been tested with our motors, guaranteeing the highest level of performance. This guide will also provide the detail behind industry standards to assist selecting the right cable for specific application needs.

Kollmorgen Cable Features	Benefits
100% shielded end-to-end with prewired Kollmorgen connectors	Mitigate radiated noise from cable and noise immunity from external sources
Large-diameter power conductors	Able to handle peak currents needed for servo control Minimal impedance in the cables maximizes efficiency and noise immunity
Cable Flex rating	Flexible cables, suitable for trailing, last longer when connected to a moving motor.
Cable bend radius	Tight-bend-radius cables are useful when you have to jam the cables into a tight fit such as a sharp corner or smaller cable track
High-voltage rated	Meets approvals such as UL and CE

# Kollmorgen 2G Cable Overview

Kollmorgen offers high performance servo cables to ensure the drive and motor operate at peak performance.

Every cable in this Selection Guide has passed Kollmorgen's rigorous tests. Our support team can provide you the optimal cable configuration for any given combination of drive, motor, and environment.

# **Dual Cables**

Dual cable solutions separate power from feedback and typically allow for longer distances between the drive and motor. Dual cables are available for Resolver feedback on AKM<sup>®</sup>2G motors.

# **Hybrid Cables**

Hybrid cables combine power conductors and feedbacksignal conductors in one cable. Less cable means lower cost, reduced weight, and fewer connectors on the motor. Hybrid Cables are available for SFD3, HIPERFACE DSL<sup>®</sup> and EnDat<sup>®</sup> feedback on AKM2G motors.

# 2G Value Line Cable Options for AKD2G Drives

# Hybrid Single Cable Options

Kollmorgen is also excited to offer a new line of 2G Value Line Cables. These cables will pair with all of our AKM2G & AKD2G offerings and will be available in both dual cable and hybrid cable options. Similar to the current Value line cables the 2G Value Line cables will excel in static applications where cost is key.

# **AKD® Servo Drive Cable Lookup Tables**

# AKD<sup>®</sup> Performance Cables

# Hybrid Single Cable Options

Hybrid cables offer a single connection point on the motor for both feedback and power. Feedback options for this connection type are:

- » SFD3 (Single-turn absolute, CA option)
- » HIPERFACE<sup>®</sup> DSL (Single-turn absolute, GE option)
- » HIPERFACE DSL (Multi-turn option, GF option)

Washdown versions of this cable are also available.

# Digital I/O cable for AKD-N

All AKD-N drives have one 8 poles M12 connector to connect digital control signals.

Drive	Part Number	Description
AKD-N (all)	SAC-8P-M12MS	5 m, M12 mating connector, unconfigured wires

## STO Cable for AKD-N-DS

AKD-N-DS drives (devices with local STO input) have an additional 4 poles M12 connectors to connect the local STO signals.

Drive	Part Number	Description
AKD-N-S	SAC-4P-M12MS	5 m, M12 mating connector, unconfigured wires, A- coded

# Fieldbus cable for AKD-N-DF

AKD-N-DF drives (devices with local fieldbus input) have an additional 4 poles M12 connectors to connect the local fieldbus signals.

Drive	Part Number	Description
AKD-N-DF	SAC-4P-M12MSD/5.0	5 m, M12 mating connector, unconfigured wires, D- coded

# CAN Bus Cables for AKD° Drives

# Configured CAN bus Cables for AKD-xyyyzz-xxCN and AKD-xyyyzz-xxCC

Part Number	Description
CBP000-002-m15-00	CAN bus cable 0.15 m
CBP000-002-m30-00	CAN bus cable 0.30 m
CBP000-002-001-00	CAN bus cable 1.00 m
CBP000-002-003-00	CAN bus cable 3.00 m

# **CAN bus Termination Connector**

Part Number	Description
AKD-CAN-Termination	CAN Termination connector
AKD-CAN-RJ12-SubD9	CAN RJ12->SubD9 adapter

The CAN Termination connector is required for bus termination of the last AKD connected to the CAN bus. For connecting an AKD to a CAN device with SubD9 connector the CAN RJ12-SubD9 adapter can be used.

Note 1: AKD/AKD2G drives have a resolver measurement accuracy of ±45", for a drive w/ motor accuracy of ±585" and RMS Noise of ±9.9". Note 2: Accuracy refers to overall system accuracy once installed in the motor. Noise refers to the RMS position noise when at stand-still. Note 3: Motor ID support means electronic motor nameplate data is included, allowing for plug-and-play commissioning. Note 4: At the time of printing, this information was not available. Please contact Kollmorgen Customer Support for the latest update. **With AKD and AKD2G drives, all received positions are interpolated to a 32-bit resolution per revolution.**

Note: Please reference pages 60 to 65 of the AKM Selection Guide for additional feedback specific information not found in this table.

## **Connector Options**

Code	Thermal Sensor*	Used with	IP Rating**	Connection type	Description		
В	PTC	AKM2	IP65	2 SpeedTec Ready connectors, size 1.0 (M23)	Angled, rotatable, mounted on motor		
С	PTC	AKM1-AKM2	IP65	2 SpeedTec Ready connectors, size 1.0 (M23)	On 0.5m cable		
С	PTC	AKM3-AKM7	IP65	2 SpeedTec Ready connectors, size 1.0 (M23)	Angled, rotatable, mounted on motor		
D	PTC	AKM2-AKM4	IP65	1 SpeedTec Ready connector, size 1.0 (M23)	Angled, rotatable, mounted on motor		
9	PT1000	AKM1	IP65	1 hybrid itec connector	Rotatable, mounted on motor		
9	PT1000	AKM2-AKM6	IP65	1 SpeedTec Ready connector, size 1.0 (M23)	Angled, rotatable, mounted on motor		
G	PTC	AKM2-AKM7	IP67	2 SpeedTec Ready connectors, size 1.0 (M23)	Straight, mounted on motor		
Н	PTC	AKM74Q & AKM82T	IP65	1 feedback threaded connector, size 1.0 (M23) 1 power threaded connector, size 1.5 (M40)	Angled, rotatable, mounted on motor		
М	PTC	AKM1-AKM4	IP20	2 Molex connectors, I <sub>c</sub> < 6 A	On 0.5m cable		
P	PTC	AKM1-AKM4	IP20	1 Molex connector, I <sub>C</sub> < 6 A	On 0.5m cable		
Т	PTC	AKM8	IP65	1 terminal box for power 1 feedback threaded connector, size 1.0 (M23)	Mounted on motor		
Y	PTC	AKM1	IP65	1 ytec connector	Rotatable, mounted on motor		

\*For Thermal Device Curves, please reference the AKM Selection Guide

\*\*IP ratings shown apply ONLY to the connector and the connector base/bushing on motor.

NOTE: These connector options are only valid for the "00" or "01" Customization/Seal Option variants. Stainless Steel Hummel connectors are used for AKM Washdown (0W) and AKM Food Grade (0F) variants.

# **Model Nomenclature**

# AKMH<sup>™</sup> Brushless Servo Motor

Note: LK mount requires 2 weeks additional lead time for the first product order. Note: Ex mounts are only available if Rx feedback devices are selected.

#### Mount-Shaft Availability

Base Model		Mount-Shaft									
	AC	AN	BK	BN	СС	CN	DK	DN	EK	EN	LK
AKMH2x	•	•		•	•	•		•			
АКМНЗх	•	•		•	•						
AKMH4x	•	•	•	•	•	•	•	•	•	•	•
AKMH5x	•	•	•	•	•	•	•	•	•	•	
AKMH6x	•	•			•	•	•	•	•	•	

1. While both EPDM and Viton materials are resistant to most chemicals commonly found in food & beverage processing, Viton O-ring is recommended for applications with fluids and solids such as fish oil, animal fat, peanut butter and peanut oil.

2. C- feedback is not available with brake.

#### **Connector/Cable Options**

#### Single Cable

- K<sup>1</sup> Cable gland w/ drive end connectors for AKD (Power is
- K' ferruled flying leads and feedback terminated into D-Sub)
- T<sup>1</sup> Tubing over cable w/ drive end connectors for AKD
- **E** Cable gland w/ drive d\end connectors for AKD2G
- **F** Tubing over cable w/ drive end connectors for AKD2G
- V<sup>2</sup> Vented connector
- N<sup>3</sup> AKD-N connector
- W<sup>2</sup> Tubing to vented connector
- $\mathbf{B}^{4}$  Cable to vented Speedtec ready connector
- G<sup>4</sup> Tubing to vented Speedtec ready connector
- **R<sup>5</sup>** Third-party mating connectors
- C Flying Leads (third-party drive ready, no d-sub)

#### **Dual Cables**

- V<sup>2</sup> Vented connector
- W<sup>2</sup> Tubing to vented connector
- **B**<sup>4</sup> Cable to vented Speedtec ready connector
- **G**<sup>4</sup> Tubing to vented Speedtec ready connector
- **R**<sup>5</sup> Mating connectors for third-party drives
- L Flying leads (2 cable only)
- M Tubing w/ flying leads (2 cable only)

#### **Right-angle Connectors**

- D Single connector (size 3-6)
- A Dual connectors (size 4-6)

#### Straight Connectors

- H Dual connectors (size 2-3)
- P Single connector (size 2 only)

#### Notes:

- 1. Single cable for power and feedback when SFD, SFD3 or DSL is chosen. Not available with other feedback options.
- 2. The single cable is terminated in a vented connector if SFD, SFD3, or DSL is chosen. If one of the other feedback devices is chosen then the power cable is terminated in a vented connector, while the feedback cable is terminated in a standard connector. Both options provide IP69K rated stainless steel connectors.
- 3. Single cable for power and feedback when SFD3 or DSL is chosen. Cable is terminated for direct connection to AKD-N with a nickel plated zinc connector. The connector is vented. Not available with other feedback options.
- 4. The single cable is terminated in a vented connector if SFD, SFD3, or DSL is chosen. If one of the other feedback devices is chosen then the power cable is terminated in a Vented connector, while the feedback cable is terminated in a standard connector. Both options provide IP67 rated nickel plated zinc connectors.
- 5. This connector option is available for only the RA, RB, RC, RD, RE, RF, RG, and RH feedback options. There will be a vented connector on the power cable and a standard connector on the feedback cable. Both connectors will be Nickel plated zinc and IP67 rated.

#### Feedback Device

- C- SFD2 (C- is not available with brake)
- CA Smart Feedback Device (SFD3)
- GA Hiperface SKS36 (ST) mapped for Servostar
- GB Hiperface SKM36 (MT) mapped for Servostar
- GE Hiperface DSL (ST)

## Self-Help Tools

#### Motioneering<sup>®</sup> Online

Size and select the right product for your application needs

#### Performance Curve Generator

Optimize TBM/KBM/AKM windings using customer supplied environmental and drive information

#### Kollmorgen Developer Network

Find answers to many key technical questions or start your own session

#### **Drawing Generator**

Provides TBM/KBM/AKM 2D and 3D drawings in many popular formats

#### Product Selector

Choose the right product

for your application needs

#### **Stepper Optimizer**

Select the most efficient stepper solution for your application

### More Expertise for a More Successful Machine

Our global engineering, service and support network provides deep knowledge of all the major industries that rely on advanced motion control and automation technology. We offer world-class engineering expertise, self-service design tools, personalized field service, and easy access to our design, application and manufacturing centers in strategic locations across the globe.

## About Kollmorgen

Kollmorgen has more than 70 years of motion experience, proven in the industry's highest-performing, most reliable motors, drives, linear actuators, gearheads, AGV control solutions and automation platforms. We deliver breakthrough solutions that are unmatched in performance, reliability and ease of use, giving machine builders an irrefutable marketplace advantage.

Kollmorgen is a brand of Altra Industrial Motion Corp. (NASDAQ: AIMC), a premier global designer and producer of a wide range of motion control and power transmission solutions. With engineered components and systems that provide the essential control of equipment speed, torque, positioning, and other functions, Altra products can be used in nearly any machine, process or application involving motion.
